## Type 3522 Series

## Key Features

## 3 Watts at $70^{\circ} \mathrm{C}$ <br> Small size to power ratio <br> Supplied on tape <br> Value marked on resistor

Available via distribution

500 volt maximum overload

250 volt
working voltage

## Terminal finish

 matte Sn over Ni

TE Connectivity is pleased to introduce this low cost high power device, suitable for auto placement in volume and for most applications, including high frequency operations, owing to the short lead structure. Supplied as standard on 7 inch Reels of 2000 pieces per reel.

Characteristics - Electrical

| Power rating at $70^{\circ} \mathrm{C}$ | 3 W |
| :--- | :--- |
| Rated current (Jumper) | 2.5 A |
| Max. overload current (Jumper) | 10 A |
| Max working voltage | 250 V |
| Max overload voltage | 500 V |
| Dielectric withstand voltage | 500 V |
| Temperature range | $-55^{\circ} \mathrm{C} \sim+155^{\circ} \mathrm{C}$ |
| Ambient temperature | $70^{\circ} \mathrm{C}$ |

* Rated continuous working voltage (RCWV) shall be determined from

RCWV = Rated Power x Resistance Value, or Maximum RCWV listed above, whichever is less
**Recommended Circuit Board Design - If this device is anticipated to run at full continuous power then action to improve the cooling should be taken. This can be a metal substrate, copper pad left under the chip, an opening in the PCB or enlarged silver conductor pads each end.

## Power derating curve

For resistors operated in ambient temperatures above $70^{\circ} \mathrm{C}$, power rating must be derated in accordance with this curve.

Construction and dimensions

| $\mathrm{L} \pm 0.10$ | $\mathrm{~W} \pm 0.15$ | $\mathrm{H} \pm 0.10$ | $\ell 1 \pm 0.25$ | $\ell 2 \pm 0.20$ |

## Marking:

Marking for E-96 series in 2512 size: 4 digit marking
First three digits are significant figures of resistance and the fourth digit represents the number of following zeros
Ex.

Marking for $\mathrm{E}-24$ series in 2512 size: 3 digit marking
First two digits are significant figures, and the third digit represents the number of zeros

| 2000 | 2 | 13.5 | 21 | 60 | 178 | 13.8 |

## Handling Recommendations

When flow soldering - the land width must be smaller than the Chip Resistor width to properly control the solder application. Generally, the land width can be Chip Resistor width (W) $\times 0.7$ to 0.8 . When reflow soldering - solder application amount can be adjusted. Thus the land width can be set to $\mathrm{W} x$ 1.0 to 1.3.

## How To Order
