# Minature SMD Reflective Sensor

## **OPR5005**

#### Features:

- High temperature operation
- Surface mountable
- Compact size
- Excellent ambient light protection

#### Description:

The **OPR5005** is a miniature reflective sensor that combines a silicon phototransistor with a GaAIAs LED in a hightemperature opaque polyamide chip carrier. It is designed to sense the motion or proximity of diffuse reflective surfaces in space-limited applications. The opaque package insures very low cross-talk and shields the phototransistor from ambient light sources, while the silicone encapsulated package allows operation over a wide temperature range. The gold-plated wraparound solder pads offer exceptional storage and wetting characteristics.

(1) Solder time less than 5 seconds at temperature extreme.

(2) Derate linearly 0.75 mW/°C above 25°C.

(3) Distance from the assembly face to the reflective surface is "d".

(4) Measured using Eastman Kodak neutral white test card with 90% white diffuse reflectance as a reflecting surface.

(5) Crosstalk (I<sub>cx</sub>) is the collector current measured using the indicated current and using a Munsell N2.25 black test card against the face of the part.
