2.5 V/3.3 V SiGe Differential 2 x 2 Crosspoint Switch with Output Level Select

The NBSG72A is a high-bandwidth fully differential 2 × 2 crosspoint switch with Output Level Select (OLS) capabilities. This is a part of the GigaComm™ family of high performance Silicon Germanium products. The device is housed in a low profile 3 × 3 mm 16-pin QFN package.

Differential inputs incorporate internal 50 Ω termination resistors and accept NECL (Negative ECL), PECL (Positive ECL), LVCMOS/LVTTL, CML, or LVDS. The OLS input is used to program the peak-to-peak output amplitude between 0 mV and 800 mV in five discrete steps. The SELECT inputs are single-ended and can be driven with either LVECL or LVCMOS/LVTTL input levels.

Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product performance may not be indicated by the Electrical Characteristics if operated under different conditions.

NOTE: Device will meet the specifications after thermal equilibrium has been established when mounted in a test socket or printed circuit board with maintained transverse airflow greater than 500 lfm. Electrical parameters are guaranteed only over the declared operating temperature range. Functional operation of the device exceeding these conditions is not implied. Device specification limit values are applied individually under normal operating conditions and not valid simultaneously.

*Typicals used for testing purposes.

**When an output level of 400 mV is desired and $V_{CC} - V_{EE} > 3.0\text{ V}$, a 2 k Ω resistor should be connected from OLS to V_{EE} .

18. Input and output parameters vary 1:1 with V_{CC} .

19. All outputs loaded with 50 Ω to $V_{CC} - 2.0\text{ V}$.

20. V_{th} , V_{IH} , V_{IL} , and V_{ISE} parameters must be complied with simultaneously.

21. V_{th} is applied to the complementary input when operating in single-ended mode. $V_{th} = (V_{IH} - V_{IL}) / 2$.

22. V_{IHD} , V_{ILD} , V_{ID} and V_{IHCMR} parameters must be complied with simultaneously.

23. V_{IHCMR} min varies 1:1 with V_{EE} , V_{IHCMR} max varies 1:1 with V_{CC} . The V_{IHCMR} range is referenced to the most positive side of the differential input signal.
