High-Voltage Start-Up IC

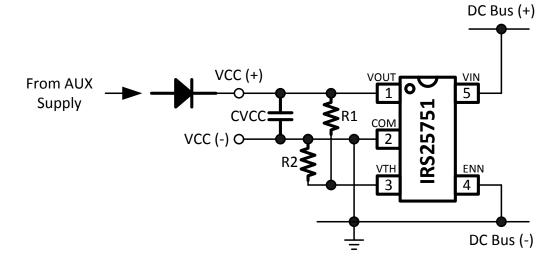

IRS25751LPBF

Description

The IRS25751 is a 480V high-voltage start-up IC ideal for supplying initial supply starting current from a high-voltage bus. The IRS25751 supplies a constant current during start-up and then consumes ultra-low standby (off) current. Additional features include programmability of the upper turn-off threshold, an ENN input, and over-temperature protection. IR's proprietary HVIC technology provides robust operation from high input voltage levels with simple yet flexible features.

Absolute Maximum Ratings

Absolute maximum ratings indicate sustained limits beyond which damage to the device may occur. All voltage parameters are absolute voltages referenced to COM, all currents are defined positive into any pin. The thermal resistance and power dissipation ratings are measured under board mounted and still air conditions.

Symbol	Definition	Min.	Max.	Units	
VIN	VIN pin voltage			625	
VOUT	VOUT pin voltage			VCLAMP [†]	
VTH	VTH pin voltage		-0.3		
ENN	ENN pin voltage			VOUT + 0.3
