

# BD675G, BD675AG, BD677G, BD677AG, BD679G, BD679AG, BD681G

## Plastic Medium-Power Silicon NPN Darlington

This series of plastic, medium-power silicon NPN Darlington transistors can be used as output devices in complementary general-purpose amplifier applications.

### Features

- High DC Current Gain
- Monolithic Construction
- Complementary to BD676, 676A, 678, 678A, 680, 680A, 682
- BD677, 677A, 679, 679A are Equivalent to MJE 800, 801, 802, 803
- These Devices are Pb-Free and are RoHS Compliant\*

### MAXIMUM RATINGS

| Rating                                                                                       | Symbol         | Value                 | Unit                     |
|----------------------------------------------------------------------------------------------|----------------|-----------------------|--------------------------|
| Collector-Emitter Voltage<br>BD675G, BD675AG<br>BD677G, BD677AG<br>BD679G, BD679AG<br>BD681G | $V_{CEO}$      | 45<br>60<br>80<br>100 | Vdc                      |

|------------------------------------------------------------------------------------------------------------|----------|-----|---|---|

Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product performance may not be indicated by the Electrical Characteristics if operated under different conditions.

1. Pulse Test: Pulse Width  $\leq 300\text{ }\mu\text{s}$ , Duty Cycle  $\leq 2.0\%$ .

Figure 1. Power Temperature Derating

Figure 2. DC Safe Operating Area

## BD675G, BD675AG, BD677G, BD677AG, BD679G, BD679AG, BD681G

There are two limitations on the power handling ability of a transistor average junction temperature and secondary breakdown. Safe operating area curves indicate  $I_C - V_{CE}$  limits of the transistor that must be observed for reliable operation; e.g., the transistor must not be subjected to greater dissipation than the curves indicate.

At high case temperatures, thermal limitations will reduce the power that can be handled to values less than the limitations imposed by secondary breakdown.
