

Product Overview

NCP6922C: 4 Channel Power Management IC (PMIC) with 2 DC-DC Converters and 2 LDOs

For complete documentation, see the data sheet.

The NCP6922C is part of the ON Semiconductor mini-power management IC family. It is optimized to supply battery powered portable application subsystems such as camera function, microprocessors, etc. This device integrates two high efficiency 800 mA step-down DC to DC converters with DVS (Dynamic Voltage Scaling) and two low dropout (LDO) voltage regulators in 4x4 mm 20 pins WQFN package.

Features

- Ultra low quiescent current (82 uA typ)
- Fully programmable by I²C
- Two low noise, low dropout regulators, programmable output voltage from 1.0 V to 3.3 V by 50 mV steps, 2 x 150 mA and output current capability, 50 uVrms typical low output noise
- Two DC-DC converters, efficiency 95%, programmable output voltage from 0.6 V to 3.3 V by 12.5 mV steps, 800 mA output current capability

Benefits

- · Save battery life
- · Offer design flexibility
- · Offer design flexibility

Applications

- · Battery powered applications power management
- · Power supply for processor with low core voltage
- · Camera modules
- · Peripheral sub-systems
- · USB powered devices

End Products

- Gaming systems
- · Digital still cameras
- · Set-top box
- GPS
- · Car infotainment

Part Electrical Specifications
