## Multi- Aperture cores (2861000302)

Part Number: 2861000302

67 MULTI- APERTURE CORE

Explanation of Part Numbers: – Digits 1 & 2 = Product Class – Digits 3 & 4 = Material Grade

-Last digit 2 = Burnished

## Multi- aperture cores are used in suppression applications and in balun (balance- unbalance) and other broadband transformers. They are also employed in airbag designs to prevent accidental activation.

All multi- aperture cores are supplied burnished.

Our "Multi- Aperture Core Kit" (part number 0199000036) is available for prototype evaluation.

For any multi- aperture requirement not listed here, feel free to contact our customer service group for availability and pricing.

## Catalog Drawing 3D Model

## Weight: 2.6 (g)

Dim	mm	mm tol	nominal inch	inch misc.	1	
А	13.3	±0.60	0.525		0	, 2222
В	10.3	±0.30	0.407			E 7////
С	7.5	±0.35	0.295		-(0)-	T TITT
Е	5.7	±0.25	0.225			
Н	3.8	±0.25	0.15			- B -
Н	3.8	±0.25	0.15		- c -	

Figure 1

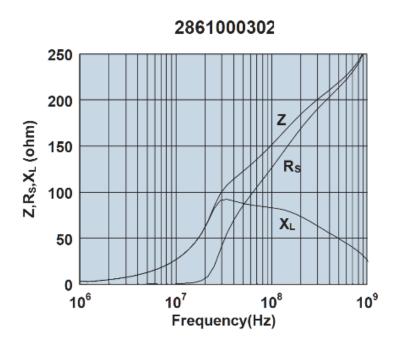

<b>Chart Legend</b> + Test frequency			
Typical Impedance (O)			

Typical I	mpedance	(Ω)
100 MHz		150
250 MHz	+	200
Electrical	Propertie	s
A <sub>L</sub> (nH)	230 Min	

Multi- aperture cores in 73 and 43 materials are controlled for impedance only. The 61 NiZn material is controlled for both impedance and  $A_L$  value. The high frequency 67 material is controlled for  $A_L$  value. Minimum impedance values are specified for the + marked frequencies. The minimum impedance is typically the listed impedance less 20%.

Multi- aperture cores in 73 and 43 material are measured for impedance on the 4193A Vector Impedance Analyzer. The 61 and 67 multi- aperture cores are tested on the 4291A Impedance Analyzer. All impedance measurements are performed with a single turn to both holes, using the shortest practical wire length.

The 61 and 67 material multi- hole beads are tested for  $A_L$  value. The test frequency is 10 kHz at < 10 gauss. The test winding is five turns wound through both holes.

Impedance, reactance, and resistance vs. frequency.
