2x4 Wire Ohms Technique

FLUKE®

- 4 Wire measurement method is used for precision lo-ohms measurements, typically < 100 Ohms
- **Why:** Eliminates including the test lead resistance in measurement, typical 0.5 Ohm without 4 wire
- **What does 2x4 Wire Ohms do:**
 - 1) Combines 4 wire Source & Sense leads into two test leads,
 - 2) Simplifies connecting to the device under test, eliminating setup errors.
 - 3) Allows probing into tight or small components

Patented Split Contacts provide 4 wire measurements in a single pair of test leads

Applications

- Relay contact resistance
- Coil resistance
- Terminators (Lo-Ohms)
- Connector contacts
- Reference Dividers

TrendPlot™

FLUKE®

- Trendplot is used to understand signal dynamics like drift, glitches etc.
- **Why:** A numeric based DMM cannot display signal historic trends.
- **What does the 8845A and 8846A offer:**
 - 1) Graphical display that plots measurements over time.
 - 2) Quickly display signal issues like drift, glitches, surges and drop-outs.
 - 3) Real time analysis, no need to transfer data to a PC.
 - 4) Vertical resolution up to 1 ppm, unheralded for graphical trend plotting

Applications

- Temperature Monitoring
- Monitoring reference test points through temperature cycle
- Verify circuit designs.
- Temp Controlled Crystal Oscillator circuit tests
- Capture Intermittent Events
- Power Supply Stability Tests

Statistical Analysis

FLUKE®

- Easily determine standard deviation (noise) of a set of measurements
- **Why:** Quantify measurements with real data. Determine statistical distribution of measurements relative to DUT specifications
- **What does the 8845A and 8846A offer:**
 - 1) Automatic calculation of Min, Max, Ave and Standard Deviation
 - 2) For convenience, present results in one screen. Eliminate having to switch functions and re-take measurements
 - 3) Graphically plot Histogram, providing an easy to use visual analysis tool.

And... It's easy to use!

- Dot Matrix display with context sensitive menus and soft keys
- Direct access to measurement parameters and instrument settings

Current Input Fuses

- The 100 mA and 10 A inputs are protected by user-replaceable fuses.
 - 100 mA input, fuse rated at 440 mA, 1000 V (fast blow)
 - 10 A input, fuse rated at 11 A, 1000 V (fast blow),

- Gain easy access without breaking cal seal
- Safety Rated CAT I 1000V, CAT II 600V
- **Warning:** For protection against fire or arc flash, replace a blown fuse only with one of the identical rating.
