1.8V / 2.5V / 3.3V Differential 2:1 Clock/Data Multiplexer / Translator with CML Outputs

w/ Selectable Input Equalizer

Multi-Level Inputs w/ Internal Termination

Description

The NB7VQ58M is a high performance differential 2-to-1 Clock or Data multiplexer with a selectable Equalizer receiver. When placed in series with a Clock /Data path operating up to 7 GHz or 10.7 Gb/s, respectively, the NB7VQ58M inputs will compensate the degraded signal transmitted across an FR4 PCB backplane or cable interconnect. Therefore, the serial data rate is increased by reducing Inter-Symbol Interference (ISI) caused by losses in copper interconnect or long cables.

The EQualizer ENable pin (EQEN) allows the IN_n/\overline{IN}_n inputs to either flow through or bypass the Equalizer section. Control of the Equalizer function is realized by setting EQEN; When EQEN is set Low, the IN_n / \overline{IN}_n inputs bypass the Equalizer. When EQEN is set High, the IN_n / \overline{IN}_n inputs flow through the Equalizer. The default state at startup is LOW. As such, the NB7VQ58M is ideal for SONET, GigE, Fiber Channel, Backplane and other Clock/Data distribution applications.

The differential inputs incorporate internal 50 Ω termination resistors that are accessed through the VT pin. This feature allows the NB7VQ58M to accept various logic level standards, such as LVPECL, CML or LVDS.

The NB7VQ58M produces minimal Clock or Data jitter operating up to 7 GHz or 10.7 Gb/s, respectively.

The 16 mA differential CML outputs provide matching internal 50 Ω terminations and 400 mV output swings when externally terminated with a 50 Ω resistor to V_{CC} .

The NB7VQ58M is offered in a low profile 3mm x 3 mm 16-pin QFN package and is a member of the GigaComm™ family of high performance Clock / Data products. Application notes, models, and support documentation are available at www.onsemi.com.

Features

- Maximum Input Data Rate > 10.7 Gb/s
- Data Dependent Jitter < 15 ps
- Maximum Input Clock Frequency > 7 GHz
- Random Clock Jitter < 0.8 ps RMS
- Selectable Input Equalization
- 180 ps Typical Propagation Delay
- 35 ps Typical Rise and Fall Times
- Differential CML Outputs, 400 mV Peak-to-Peak, Typical
- Operating Range: $V_{CC} = 1.71 \text{ V to } 3.6 \text{ V}$ with $GND = 0 \text{ V}$
- Internal 50 Ω Input Termination Resistors
- This is a Pb-Free Device

-	EP	-	The Exposed Pad (EP) on the QFN-16 package bottom is thermally connected to the die for improved heat transfer out of package. The exposed pad must be attached to a heat-sinking conduit. The pad is electrically connected to the die, and must be electrically and thermally connected to GND on the PC board.

1. In the differential configuration when the input termination pins (VT0, VT1) are connected to a common termination voltage or left open, and if no signal is applied on IN0/ $\overline{IN0}$, IN1/ $\overline{IN1}$ inputs, then the device will be susceptible to self-oscillation. Q/ \overline{Q} outputs have internal 50 Ω source termination resistors.
2. All VCC and GND pins must be externally connected to a power supply for proper operation.

NOTE: Device will meet the specifications after thermal equilibrium has been established when mounted in a test socket or printed circuit board with maintained transverse airflow greater than 500 lfm. Electrical parameters are guaranteed only over the declared operating temperature range. Functional operation of the device exceeding these conditions is not implied. Device specification limit values are applied individually under normal operating conditions and not valid simultaneously.

5. Input and output parameters vary 1:1 with V_{CC} .

6. CML outputs loaded with $50\ \Omega$ to V_{CC} for proper operation.

7. V_{th} , V_{IH} , V_{IL} and V_{ISE} parameters must be complied with simultaneously.

8. V_{th} is applied to the complementary input when operating in single-ended mode.

9. V_{IHD} , V_{ILD} , V_{ID} and V_{CMR} parameters must be complied with simultaneously.

10. V_{CMR} min varies 1:1 with GND, V_{CMR} max varies 1:1 with V_{CC} . The V_{CMR} range is referenced to the most positive side of the differential input signal.
