## 8-Bit Parallel-Input Protected Latched Driver

## General Description

The MIC58P01 parallel-input latched driver is a highvoltage ( 80 V ), high-current ( 500 mA ) integrated circuit comprised of eight CMOS data latches, a bipolar Darlington transistor driver for each latch, and CMOS control circuitry for the common CLEAR, STROBE, and OUTPUT ENABLE functions. Similar to the MIC5801, additional protection circuitry supplied on this device includes thermal shutdown, under voltage lockout (UVLO), and overcurrent shutdown.

The bipolar/CMOS combination provides an extremely low-power latch with maximum interface flexibility. The MIC58P01 has open-collector outputs capable of sinking 500 mA and integral diodes for inductive load transient suppression with a minimum output breakdown voltage rating of 80 V ( 50 V sustaining). The drivers may be paralleled for higher load current capability.

With a 5V logic supply, the MIC58P01 will typically operate at better than 5 MHz . With a 12 V logic supply, significantly higher speeds are obtained. The CMOS inputs are compatible with standard CMOS, PMOS, and NMOS circuits. TTL circuits may require pull-up resistors.

Each of these eight outputs has an independent overcurrent shutdown of 500 mA . Upon current shutdown, the affected channel will turn OFF until $V_{D D}$ is cycled or the ENABLE/RESET pin is pulsed high. Current pulses less than $2 \mu \mathrm{~s}$ will not activate current shutdown. Temperatures above $165^{\circ} \mathrm{C}$ will shut down all outputs. The UVLO circuit disables the outputs at low $V_{D D}$; hysteresis of 0.5 V is provided.

Datasheets and support documentation are available on Micrel's web site at: www.micrel.com.

## Features

- 4.4MHz Minimum Data Input Rate
- High-Voltage, High-Current Outputs
- Per-Output Overcurrent Shutdown ( 500 mA typical)
- Under Voltage Lockout
- Thermal Shutdown
- Output Transient Protection Diodes
- CMOS, PMOS, NMOS, and TTL Compatible Inputs
- Internal Pull-Down Resistors
- Low-Power CMOS Latches

## Typical Application

Micrel Inc. • 2180 Fortune Drive •San Jose, CA 95131•USA• tel +1 (408) 944-0800• fax + 1 (408) 474-1000• http://www.micrel.com

## Ordering Information

| Part Number | Junction Temperature Range | Package | Pb-Free |
| :--- | :---: | :---: | :---: |
| MIC58P01YV | $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ | 28 -Pin PLCC | $\sqrt{ }$ |
| MIC58P01YWM | $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ | 28 -Pin Wide SOIC | $\sqrt{ }$ |

## Pin Configuration

28-Pin PLLC (V) (Top View)

24-Pin SOIC (WM)
(not pin compatible with MIC5801YWM)

## Typical Input

## Pin Description

| Pin Number (PLCC) | Pin Number (SOIC) | Pin Name | Pin Function |
| :---: | :---: | :---: | :---: |
| 1 | 2 | CLEAR | Resets all Latches and turns all outputs OFF (open). |
| 3 | 3 | STROBE | Input Strobe Pin. Loads output latches when High. |
| 5-12 | 4-11 | $\mathrm{IN}_{\mathrm{N}}$ | Parallel Inputs, 1 through 8. |
| 15 | 1,12 | GROUND | Logic and Output Ground pin. |
| 17 | 13 | COMMON | Transient suppression diode common cathode pin. |
| 18-25 | 14-21 | OUT $_{\text {N }}$ | Parallel Outputs, 8 through 1. |
| 27 | 22 | $V_{\text {DD }}$ | Logic Supply voltage. |
| 28 | 23 | $\begin{aligned} & \overline{\text { OUTPUT }} \\ & \text { ENABLE / } \\ & \text { RESET } \end{aligned}$ | When Low, Outputs are active. When High, outputs are inactive and device is reset from a fault condition. An undervoltage condition emulates a high OE output. |

## Notes:

1. Exceeding the absolute maximum ratings may damage the device.
2. The device is not guaranteed to function outside its operating ratings.
3. Micrel CMOS devices have input-static protection but are susceptible to damage when exposed to extremely high static electrical charges.
4. Specification for packaged product only.
5. Operation of these devices with standard TTL or DTL may require the use of appropriate pull-up resistors to insure a minimum logic "1".
6. Under-Voltage Lockout is guaranteed to release device at no more than 4.5 V , and disable the device at no less than 3.0 V .

## Electrical Characteristics ${ }^{(4)}$ (Continued)

$V_{D D}=5 \mathrm{~V}, \mathrm{~T}_{\mathrm{A}}=25^{\circ} \mathrm{C}$, unless otherwise noted.

## Truth Table

| $I N_{N}$ | Strobe | Clear | Output <br> Enable | OUT $_{N}$ |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | t |  |
| 0 | 1 | 0 | 0 | X | OFF |
| 1 | 1 | 0 | 0 | X | ON |
| X | X | 1 | X | X | OFF |
| X | X | X | 1 | X | OFF |
| X | 0 | 0 | 0 | ON | ON |
| X | 0 | 0 | 0 | OFF | OFF |

X = Irrelevant
$t-1=$ Previous output state
$t=$ Present output state

Information present at an input is transferred to its latch when the STROBE is high. A high CLEAR input will set all latches to the output OFF condition regardless of the Data or STROBE input levels. A high OUTPUT ENABLE will set all outputs to the OFF condition, regardless of any other input conditions. When the OUTPUT ENABLE is low, the outputs depend on the state of their respective latches. If current shutdown is activated, the OUTPUT ENABLE must be pulsed high to restore operation. Over temperature faults are not latched and require no reset pulse.

## Timing

## Timing Conditions

( $\mathrm{T}_{\mathrm{A}}=+25^{\circ} \mathrm{C}$, Logic Levels are $\mathrm{V}_{\mathrm{DD}}$ and Ground, $\mathrm{V}_{\mathrm{DD}}=5 \mathrm{~V}$ )
A. Minimum data active time before strobe enabled (data set-up time) .................................................................... 50ns
B. Minimum data active time after strobe disabled (data hold time).......................................................................... 50ns
C. Minimum strobe pulse width ................................................................................................................................ 125ns
D. Typical time between strobe activation and output on to off transition .................................................................. 500ns
E. Typical time between strobe activation and output off to on transition.................................................................. 500ns
F. Minimum clear pulse width ................................................................................................................................. 300ns
G. Minimum data pulse width ................................................................................................................................. 225ns

NOTES:

1. DIMENSIONS ARE IN INCHES [MM] CONTROLLING DIMENSION: INCHES.
2. DIMENSION DOES NOT INCLUDE MOLD FLASH OR PROTRUSIONS, EITHER OF WHICH SHALL NOT EXCEED 0.008 [0.203].
3. LEAD DIMENSION DOES NOT INCLUDE DAMBAR PROTRUSION.
4. MAXIMUM AND MINIMUM SPECIFICATIONS ARE INDICATED AS FOLLOWS : MAX/MIN 5. PACKAGE TOP DIMENSION MAY BE SLIGHTLY SMALLER THAN BOTTOM DIMENSION.

## MICREL, INC. 2180 FORTUNE DRIVE SAN JOSE, CA 95131 USA

TEL +1 (408) 944-0800 FAX +1 (408) 474-1000 WEB http://www.micrel.com
Micrel, Inc. is a leading global manufacturer of IC solutions for the worldwide high performance linear and power, LAN, and timing \& communications markets. The Company's products include advanced mixed-signal, analog \& power semiconductors; high-performance communication, clock management, MEMs-based clock oscillators \& crystal-less clock generators, Ethernet switches, and physical layer transceiver ICs. Company customers include leading manufacturers of enterprise, consumer, industrial, mobile, telecommunications, automotive, and computer products. Corporation headquarters and state-of-the-art wafer fabrication facilities are located in San Jose, CA, with regional sales and support offices and advanced technology design centers situated throughout the Americas, Europe, and Asia. Additionally, the Company maintains an extensive network of distributors and reps worldwide.

Micrel makes no representations or warranties with respect to the accuracy or completeness of the information furnished in this datasheet.
