INNOVATOR IN ELECTRONICS

EMI Suppression Filters (for DC)/ Chip Inductors for Automotive

Explanation of category in this catalog

Infotainment

Info-tainment

The product for entertainment equipment like car navigations, car audios, and body control equipment like wipers, power windows.

Powertrain, Safety

Power-train

The product for high reliability applications like powertrain and safety, in addition to infotainment applications.

EU RoHS Compliant

- All the products in this catalog comply with EU RoHS.
- EU RoHS is "the European Directive 2011/65/EU on the Restriction of the Use of Certain Hazardous Substances in Electrical and Electronic Equipment."
- For more details, please refer to our web page, "Murata's Approach for EU RoHS" (https://www.murata.com/en-eu/support/compliance/rohs).

Because of the difference of measurement condition, electrical characteristics plots on this catalog may have some difference to official specification value.

Contents

Product specifications are as of November 2017.

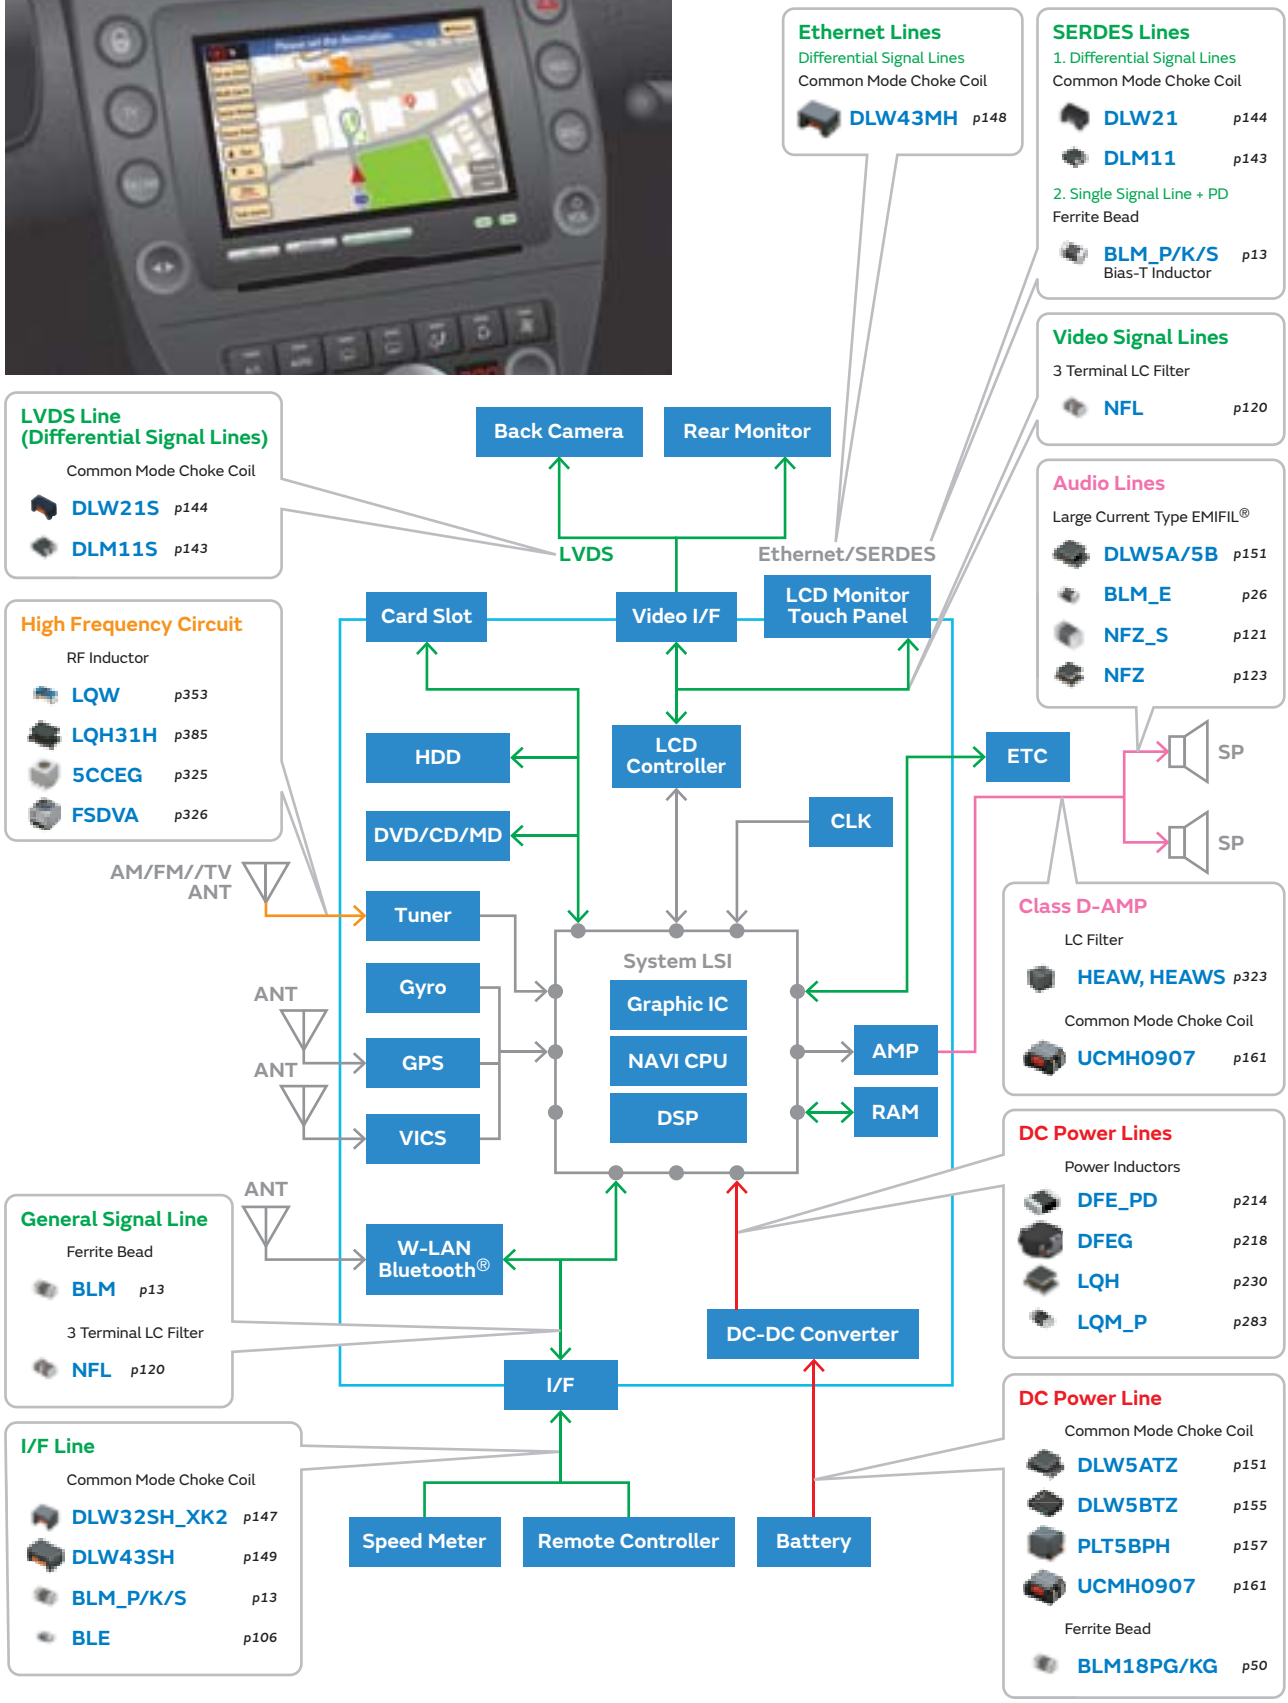
EMI Suppression Filters (for DC)

Chip Inductors

Please check the MURATA website (**https://www.murata.com/**) if you cannot find a part number in this catalog.

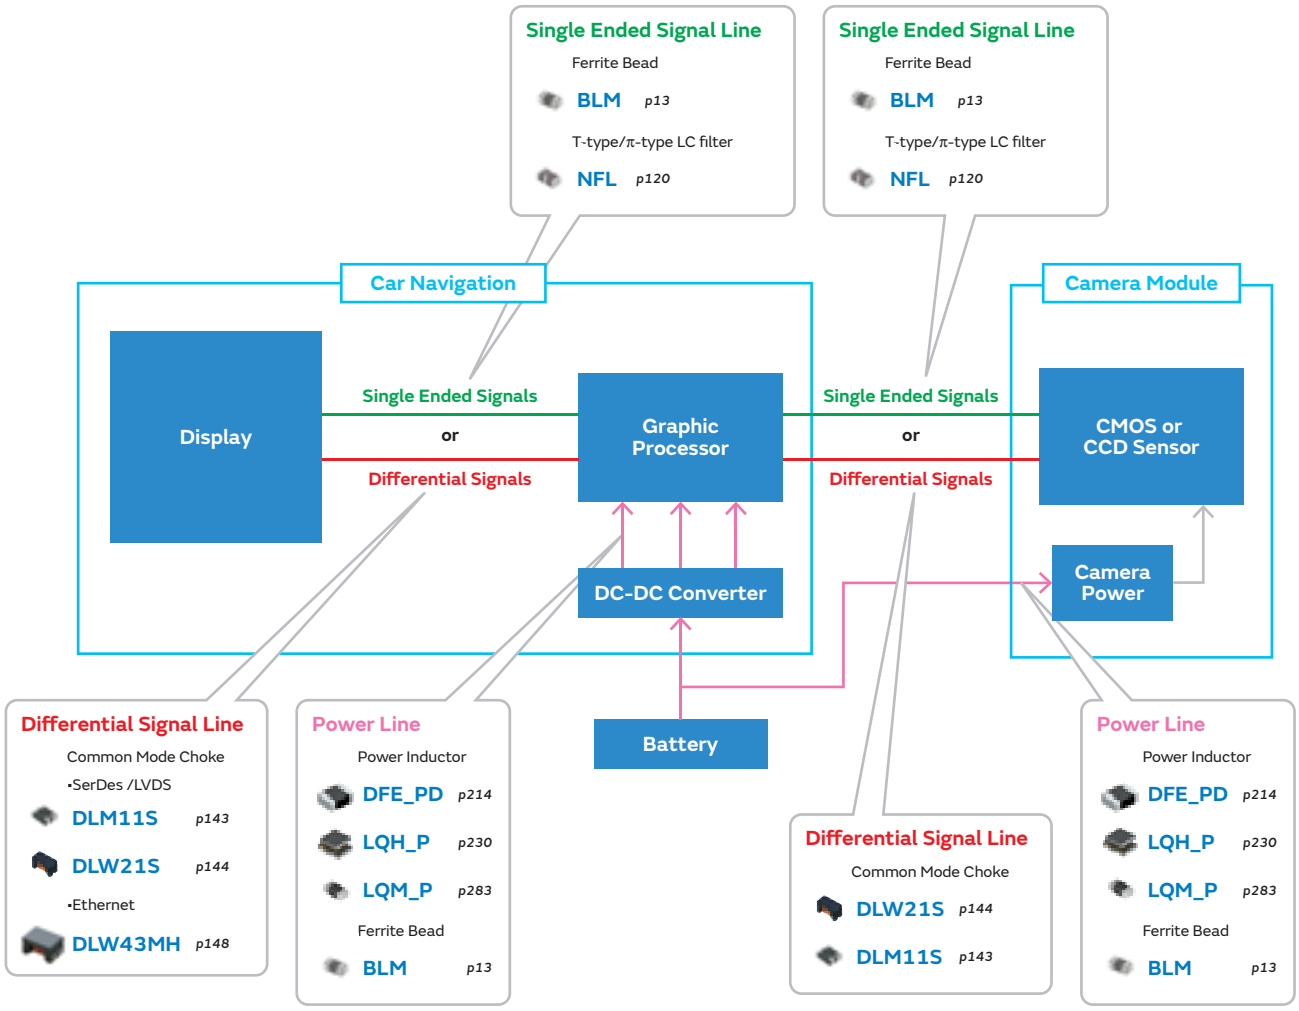
Application Examples

Car Navigation System



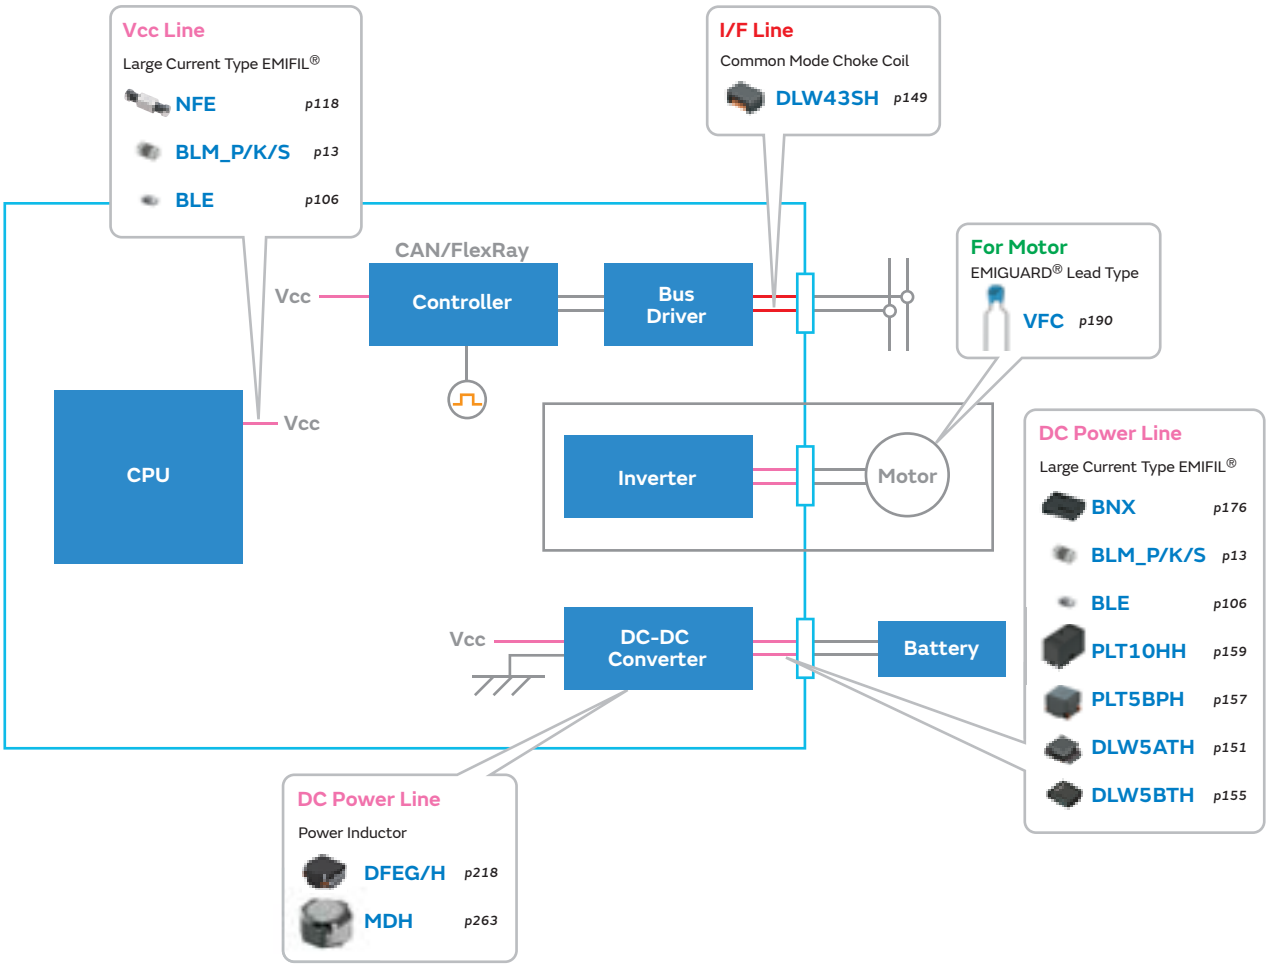
Application Examples

Car Camera System



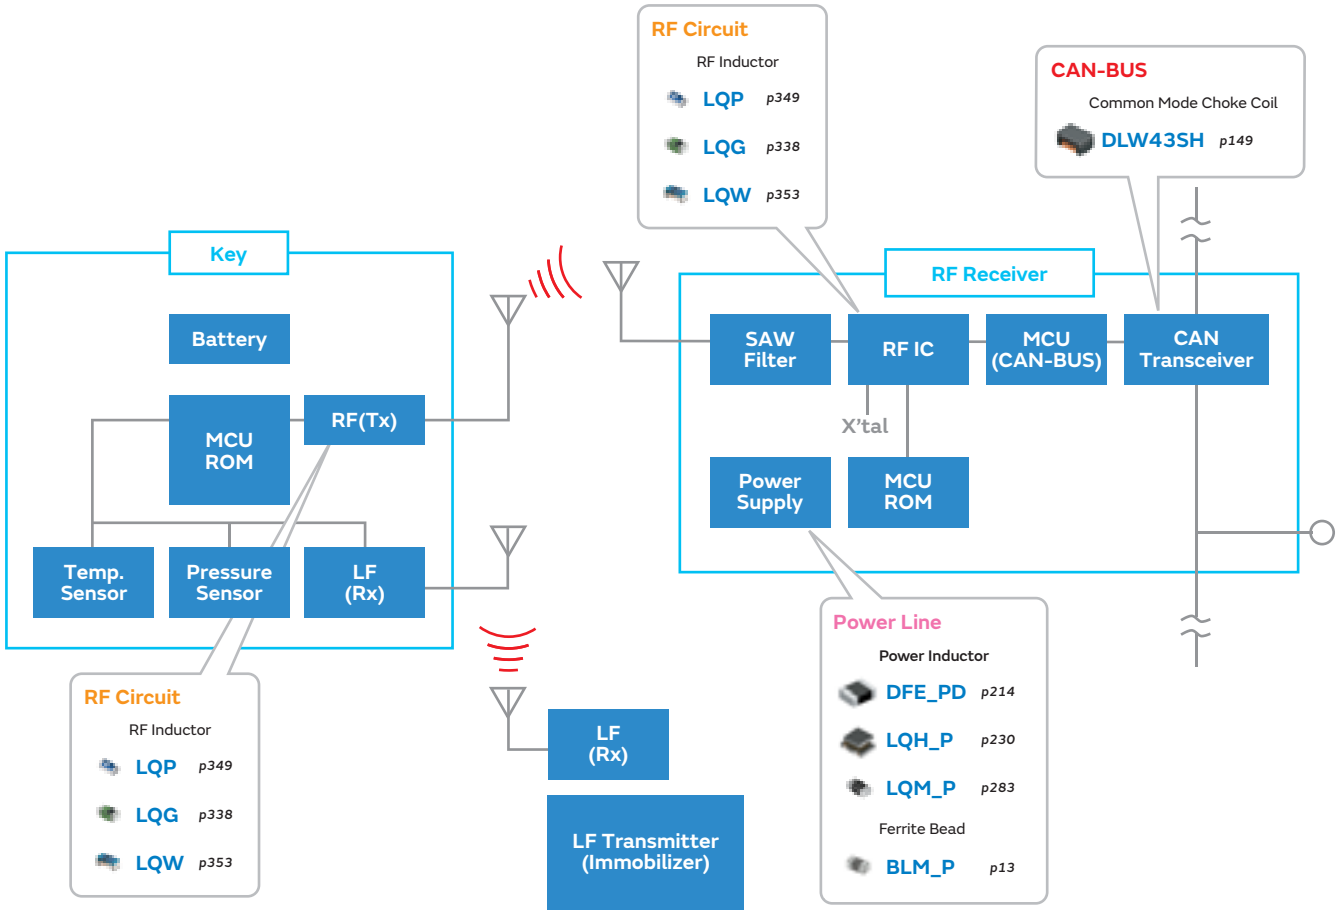
Application Examples

Electronic Control Unit



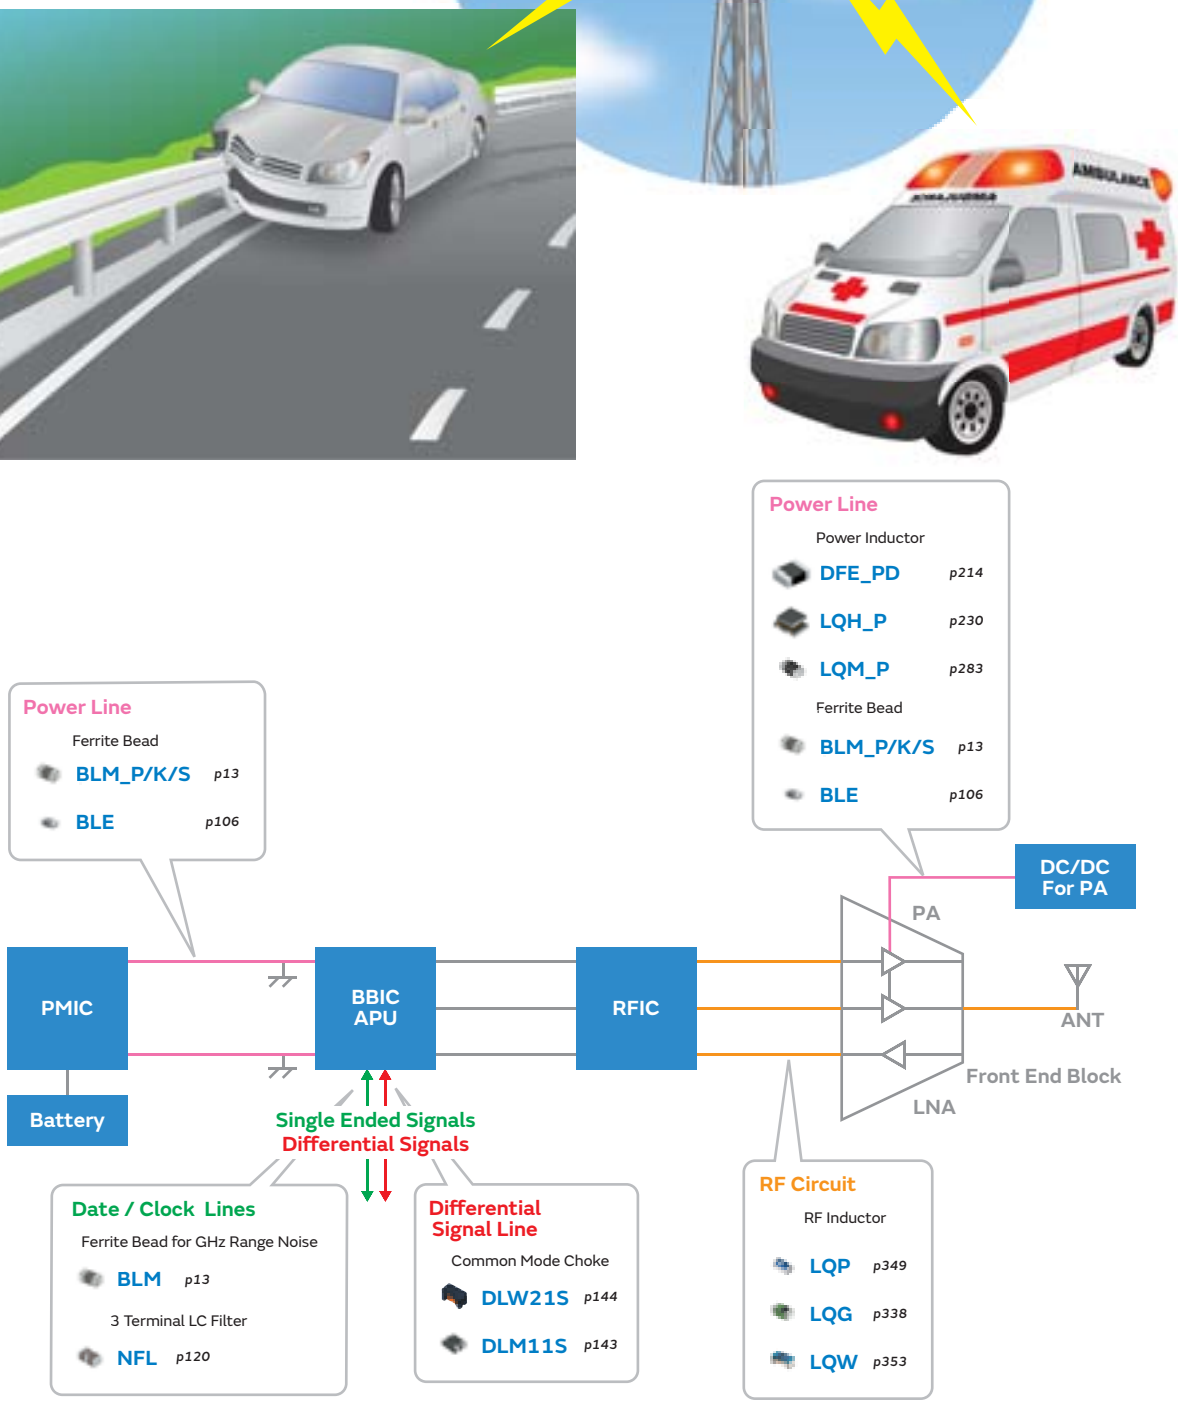
Application Examples

Smart Keyless Entry



Application Examples

Telematics Circuit



Product Guide

BL□
Inductor Type

			Series		Applications	Size Code in inch (in mm)	Impedance at 100MHz
For General Band Noise	Signal Lines Type	For General Signal Lines	BLM03AX	p16	Info-tainment	0201 (0603)	10Ω to 1000Ω
			BLM15AX	p32	Info-tainment	0402 (1005)	10Ω to 1000Ω
			BLM03AG	p18	Info-tainment	0201 (0603)	10Ω to 1000Ω
			BLM15AG	p34	Info-tainment, Power-train	0402 (1005)	10Ω to 1000Ω
			BLM18AG	p61	Info-tainment, Power-train	0603 (1608)	120Ω to 1000Ω
			BLM18AG* (150°C available)	p65	Power-train	0603 (1608)	120Ω to 1000Ω
			BLM18AG* (Conductive glue)	p63	Power-train	0603 (1608)	470Ω to 1000Ω
			BLM21AG	p88	Info-tainment, Power-train	0805 (2012)	120Ω to 1000Ω
			BLM21AG* (150°C available)	p90	Power-train	0805 (2012)	120Ω to 1000Ω
			BLM31AJ	p103	Power-train	1206 (3216)	600Ω
		For High Speed Signal Lines	BLM03B	p20	Info-tainment	0201 (0603)	10Ω to 600Ω
			BLM15B	p36	Info-tainment, Power-train	0402 (1005)	5Ω to 1800Ω
			BLM18B	p67	Info-tainment, Power-train	0603 (1608)	5Ω to 2500Ω
			BLM18B* (150°C available)	p72	Power-train	0603 (1608)	47Ω to 2500Ω
			BLM21B	p92	Info-tainment, Power-train	0805 (2012)	5Ω to 2700Ω
	Power Lines Type		BLM03PX*	p13	Info-tainment	0201 (0603)	22Ω to 80Ω
			BLM03PG	p15	Info-tainment	0201 (0603)	22Ω to 33Ω
			BLM15PX*	p28	Info-tainment	0402 (1005)	33Ω to 600Ω
			BLM15PG/PD*	p30	Info-tainment	0402 (1005)	10Ω to 120Ω
			BLM18PG*	p50	Info-tainment, Power-train	0603 (1608)	30Ω to 470Ω
			BLM21PG*	p83	Info-tainment, Power-train	0805 (2012)	22Ω to 330Ω
			BLM21PG* (150°C available)	p85	Power-train	0805 (2012)	22Ω to 330Ω
			BLM31PG*	p96	Info-tainment, Power-train	1206 (3216)	33Ω to 600Ω
			BLM41PG*	p104	Info-tainment, Power-train	1806 (4516)	60Ω to 1000Ω
			BLM18KG* (Low DC Resistance Type)	p55	Info-tainment, Power-train	0603 (1608)	26Ω to 1000Ω
			BLM18KG* (150°C available)	p58	Power-train	0603 (1608)	26Ω to 1000Ω
			BLM31KN*	p98	Info-tainment, Power-train	1206 (3216)	120Ω to 1000Ω
			BLM31KN* (150°C available)	p100	Power-train	1206 (3216)	120Ω to 1000Ω
			BLM18SG* (Low DC Resistance Type)	p52	Info-tainment	0603 (1608)	26Ω to 330Ω
			BLM18SN*	p54	Info-tainment, Power-train	0603 (1608)	22Ω
			BLM21SN*	p87	Info-tainment, Power-train	0805 (2012)	30Ω
			BLM31SN*	p102	Info-tainment, Power-train	1206 (3216)	50Ω
			BLE18PS*	p106	Info-tainment	0603 (1608)	8.5Ω
			BLE32PN	p107	Info-tainment, Power-train	1210 (3225)	26Ω to 30Ω
For GHz Band Noise	Universal Type [Power Lines / Signal Lines]		BLM03EB*	p26	Info-tainment	0201 (0603)	25Ω to 50Ω
			BLM15EG*	p47	Info-tainment, Power-train	0402 (1005)	120Ω to 220Ω
			BLM18EG*	p79	Info-tainment, Power-train	0603 (1608)	100Ω to 600Ω
			BLM18HE*	p75	Info-tainment, Power-train	0603 (1608)	600Ω to 1500Ω
	Signal Lines Type		BLM03HG	p23	Info-tainment, Power-train	0201 (0603)	600Ω to 1200Ω
			BLM03HD	p23	Info-tainment	0201 (0603)	330Ω to 1800Ω
			BLM03HB	p23	Info-tainment	0201 (0603)	190Ω to 400Ω
			BLM15HG	p42	Info-tainment, Power-train	0402 (1005)	600Ω to 1000Ω
			BLM15HG* (150°C available)	p45	Power-train	0402 (1005)	600Ω to 1000Ω
			BLM15HD	p42	Info-tainment, Power-train	0402 (1005)	600Ω to 1800Ω
			BLM15HB	p42	Info-tainment, Power-train	0402 (1005)	120Ω to 220Ω
			BLM18HG	p75	Info-tainment, Power-train	0603 (1608)	470Ω to 1000Ω
			BLM18HD	p75	Info-tainment, Power-train	0603 (1608)	470Ω to 1000Ω
			BLM18HB	p75	Info-tainment	0603 (1608)	120Ω to 330Ω
For High-GHz Band Noise	Signal Lines Type		BLM15GG	p49	Info-tainment	0402 (1005)	220Ω to 470Ω
			BLM15GA	p49	Info-tainment	0402 (1005)	75Ω
			BLM18GG	p82	Info-tainment	0603 (1608)	470Ω

* The derating of rated current is required for some items according to the operating temperature on each product page.

NF□

Combined Type

	Series	Applications	Size Code in inch (in mm)	Cut-off Frequency
Signal Lines Type	**NFL18ZT** p120	Info-tainment	0603 (1608)	50MHz to 500MHz

Combined Type

	Series	Applications	Size Code in inch (in mm)	Capacitance
Universal Type [Power Lines / Signal Lines]	**NFE31ZT** p118	Info-tainment	1206 (3216)	22pF to 2200pF
	NFE61HT p119	Power-train	2706 (6816)	33pF to 3300pF

Inductor Type

	Series	Applications	Size Code in inch (in mm)	Impedance at 1MHz
For LED Lines	**NFZ32BW*** p123	Info-tainment	1210 (3225)	3.3Ω to 880Ω
	NFZ5BBW* p129	Info-tainment	2020 (5050)	2.9Ω to 140Ω

* The derating of rated current is required for some items according to the operating temperature on each product page.

Inductor Type

	Series	Applications	Size Code in inch (in mm)	Impedance at 100MHz
For Audio Lines	**NFZ18SM*** p121	Info-tainment	0603 (1608)	120Ω to 700Ω

* The derating of rated current is required for some items according to the operating temperature on each product page.

DL□

Common Mode Choke Coils

		Series	Applications	Size Code in inch (in mm)	Common Mode Impedance at 100MHz
Signal Lines Type	For Differential Signal Lines	**DLM11S** p143	Info-tainment	0504 (1210)	45Ω to 90Ω
		DLW21S p144	Info-tainment	0805 (2012)	67Ω to 490Ω
		DLW31S p146	Power-train	1206 (3216)	2200Ω
Universal Type [Power Lines / Signal Lines]		**DLW5BS** p154	Info-tainment	2020 (5050)	500Ω to 800Ω
		DLW5AT*/DLW5BT* p151	Info-tainment Power-train	2014 (5036)/2020 (5050)	45Ω to 1400Ω
Power Lines Type		**UCMH0907** p161	Info-tainment	3527 (9070)	700Ω

* The derating of rated current is required for some items according to the operating temperature on each product page.

Common Mode Choke Coils

	Series	Applications	Size Code in inch (in mm)	Common Mode Inductance at 0.1MHz
For CAN/CAN FD/FlexRay	**DLW32SH** p147	Power-train	1210 (3225)	11μH to 100μH
	DLW43MH p148	Power-train	1812 (4532)	200μH

Common Mode Choke Coils

		Series	Applications	Size Code in inch (in mm)	Common Mode Inductance at 0.1MHz
Signal Lines Type	For Differential Signal Lines	**DLW43S** p149	Power-train	1812 (4532)	11μH to 100μH

Common Mode Choke Coils

		Series	Applications	Size Code in inch (in mm)	Common Mode Inductance at 1MHz
Signal Lines Type	For Differential Signal Lines	**DLW43S** p149	Power-train	1812 (4532)	51μH to 100μH

PL□

Large Current Common Mode Choke Coil for Automotive Available

	Series	Applications	Size Code in inch (in mm)	Common Mode Impedance at 10MHz
Power Lines Type	**PLT10H*** p159	Power-train	-	45Ω to 1000Ω
	PLT5BP* p157	Power-train	2020 (5050)	100Ω to 500Ω

* The derating of rated current is required for some items according to the operating temperature on each product page.

BNX

Block EMIFIL®

		Series	Applications	Height (mm)	Rated Voltage (Vdc)	Rated Current (A)
Power Lines Type	SMD Type	**BNX024H01*** p176	Power-train	3.5	50	20
		BNX025H01* p176	Power-train	3.5	25	20
		BNX026H01* p176	Power-train	3.5	50	20
		BNX027H01* p176	Power-train	3.5	16	20
	Lead Type	**BNX012H01*** p191	Power-train	8.5 max.	50	15

* The derating of rated current is required for some items according to the operating temperature on each product page.

BLL

Leaded Multilayer Ferrite Beads

	Series	Applications	Height (mm)	Impedance at 100MHz
Signal Lines Type	**BLL18AG** p185	Power-train	4.0 max.	120Ω to 1000Ω

DS□

3-Terminal Capacitor Lead Type

	Series	Applications	Height (mm)	Capacitance
Universal Type [Power Lines / Signal Lines]	**DSS1** p187	Info-tainment	7.5 max.	22pF to 100nF

VF□

Lead Type Capacitor with Varistor Function

	Series	Applications	Height (mm)	Capacitance	Varistor Voltage
Power Lines Type	**VFC2** p190	Power-train	6.0 max.	1.0μF	27V

Part Numbering

Chip Ferrite Bead for Automotive

(Part Number)

BL	M	18	AG	102	S	Z	1	D
❶	❷	❸	❹	❺	❻	❼	❽	❾

❶Product ID

Product ID	
BL	Chip Ferrite Beads

❷Type

Code	Type
E	DC Bias Characteristics Improved Type
M	Ferrite Bead Single Type

❸Dimensions (LxW)

Code	Dimensions (LxW)	Size Code (inch)
03	0.6x0.3mm	0201
15	1.0x0.5mm	0402
18	1.6x0.8mm	0603
21	2.0x1.25mm	0805
31	3.2x1.6mm	1206
32	3.2x2.5mm	1210
41	4.5x1.6mm	1806

❹Characteristics/Applications

Code *1	Characteristics/Applications	Series
AG	For General Use	BLM03/15/18/21
AJ		BLM31
AX		BLM03/15
BA	For High-speed Signal Lines	BLM15/18
BB		BLM03/15/18/21
BC		BLM03/15
BD		BLM03/15/18/21
BX		BLM15
KG	For Power Lines	BLM18
KN		BLM31
PD		BLM15
PG		BLM03/15/18/21/31/41
PN		BLE32
PS		BLE18
PX		BLM03/15
SG		BLM18
SN		BLM18/21/31
HG	For GHz Band General Use	BLM03/15/18
EB	For GHz Band High-speed Signal Lines (Low Direct Current Type)	BLM03
EG	For GHz Band General Use (Low DC Resistance Type)	BLM15/18
HB	For GHz Band High-speed Signal Lines	BLM03/15/18
HD		BLM03/15/18
HE		BLM18
GA	For High-GHz Band High-speed Signal Lines	BLM15
GG	For High-GHz Band General Use	BLM15/18

*1 Frequency characteristics vary with each code.

❺Impedance

Expressed by three figures. The unit is in ohm (Ω) at 100MHz. The first and second figures are significant digits, and the third figure expresses the number of zeros that follow the two figures.

❻Electrode

Expressed by a letter.

Ex.)

Code	Electrode
S/F/T/B/J	Sn Plating
A	Au Plating
W	Ag/Pd

❼Category

Code	Category	
Z	For Automotive	Infotainment
H		Powertrain, Safety

❽Number of Circuits

Code	Number of Circuits
1	1 Circuit

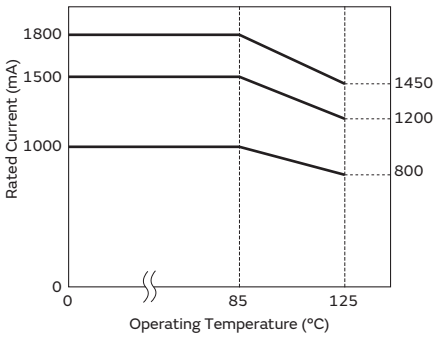
Derating of Rated Current

In operating temperature exceeding +85°C, derating of current is necessary for BLM03PX_S□1 series.
Please apply the derating curve shown in chart according to the operating temperature.

Derating of Rated Current



Chip Ferrite Bead SMD Type

BLM03PG Series 0201/0603(inch/mm)

Chip Ferrite Bead (BL□ Series) ⚠Caution/Notice

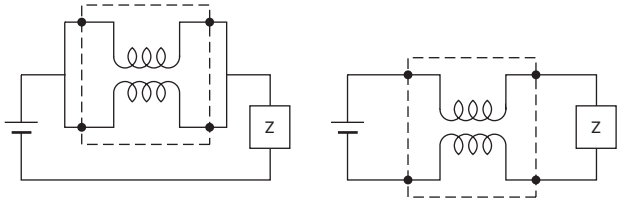
⚠Caution

Rating

1. About the Rated Current
   Do not use products beyond the rated current as this may create excessive heat and deteriorate the insulation resistance.
2. About the Excessive Surge Current
   Excessive surge current (pulse current or rush current) than specified rated current applied to the product may cause a critical failure, such as an open circuit, burnout caused by excessive temperature rise. Please contact us in advance in case of applying the surge current.

Soldering and Mounting

1. Self-heating
   Please pay special attention when mounting chip ferrite beads BLM□□AX/P/K/S series chip power beads BLE series in close proximity to other products that radiate heat. The heat generated by other products may deteriorate the insulation resistance and cause excessive heat in this component.
2. Terminal Connection (BLT)
   The terminations shall be connected correctly.
   The product consists of two coils.
   In order to provide the appropriate performance, two terminations shall be connected to the single power line and used as one coil.
   If the terminations are connected to the power line and ground line separately, serious problems such as open circuit, short circuit, or flames might be caused due to extreme heat generation.



right connection　　wrong connection

Notice

Storage and Operating Conditions

<Operating Environment>
Do not use products in the corrodible atmosphere such as acidic gases, alkaline gases, chlorine, sulfur gases, organic gases. (the sea breeze, Cl_2, H_2S, NH_3, SO_2, NO_2,etc)
Do not use products in the environment close to the organic solvent.
<Storage and Handling Requirements>
1. Storage Period
   BLM15E/15H/15G series should be used within 12 months, the other series should be used within 6 months. Solderability should be checked if this period is exceeded.
2. Storage Conditions
   (1) Storage temperature: -10 to +40˚C
   Relative humidity: 15 to 85%
   Avoid sudden changes in temperature and humidity.
   (2) Do not store products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.

Notice (Soldering and Mounting)

1. Cleaning
   Failure and degradation of a product are caused by the cleaning method. When you clean in conditions that are not in mounting information, please contact Murata engineering.
2. Soldering
   Reliability decreases with improper soldering methods. Please solder by the standard soldering conditions shown in mounting information.
3. Mounting on-boad with Conductive Glue
   BLM18AG□□□WH is designed for conductive glue mounting method. Please refer to Mounting infomation.
4. Other
   Noise suppression levels resulting from Murata's EMI suppression filters EMIFIL® may vary, depending on the circuits and ICs used, type of noise, mounting pattern, mounting location, and other operating conditions. Be sure to check and confirm in advance the noise suppression effect of each filter, in actual circuits, etc. before applying the filter in a commercial-purpose equipment design.

Continued on the following page.↗

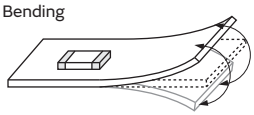
Chip Ferrite Bead (BL□ Series) ⚠Caution/Notice

Continued from the preceding page.↘

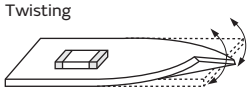
Handling

1. Resin Coating
   Using resin for coating/molding products may affect the products performance.
   So please pay careful attention in selecting resin.
   Prior to use, please make the reliability evaluation with the product mounted in your application set.
2. Handling of a Substrate
   After mounting products on a substrate, do not apply any stress to the product caused by bending or twisting to the substrate when cropping the substrate, inserting and removing a connector from the substrate or tightening screw to the substrate.
   Excessive mechanical stress may cause cracking in the Product.

Bending



Twisting



3. Mounting Density
   Add special attention to radiating heat of products when mounting the inductor near the products with heating.
   The excessive heat by other products may cause deterioration at joint of this product with substrate.

- About land pad thickness of BLE32PN, please note the upper limit of the temperature.
- Do not apply narrower pattern than listed above to BLMppAX/P/K/S. Narrow pattern can cause excessive heat or open circuit.

Continued on the following page.↗

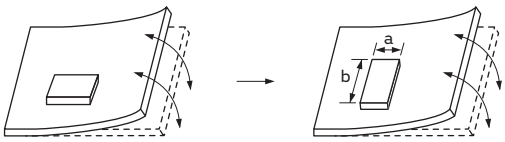
Chip Ferrite Bead (BL□ Series) Soldering and Mounting

Continued from the preceding page.↘

● PCB Warping

PCB should be designed so that products are not subjected to the mechanical stress caused by warping the board.

Products should be located in the sideways direction (Length: a<b) to the mechanical stress.



Poor example　　Good example

2. Solder Paste Printing and Adhesive Application

When reflow soldering the chip ferrite beads and bead inductor the printing must be conducted in accordance with the following cream solder printing conditions.
If too much solder is applied, the chip will be prone to damage by mechanical and thermal stress from the PCB and may crack.
Standard land dimensions should be used for resist and copper foil patterns.

(in mm)

Series	Solder Paste Printing
BLM **BLE**	●Ensure that solder is applied smoothly to a minimum height of 0.2mm to 0.3mm at the end surface of the part. ●Guideline of solder paste thickness: 100-150μm: BLM03 100-200μm: BLM15/18/21/31/41/BLE18/32 
3. Standard Soldering Conditions

(1) Soldering Methods

Use flow and reflow soldering methods only.
Use standard soldering conditions when soldering chip ferrite beads and bead inductor.
In cases where several different parts are soldered, each having different soldering conditions, use those conditions requiring the least heat and minimum time.

Solder: Use Sn-3.0Ag-0.5Cu solder. Use of Sn-Zn based solder will deteriorate performance of products. If using BLA series with Sn-Zn based solder, please contact Murata in advance.

Flux:

● Use Rosin-based flux.
In case of using RA type solder, products should be cleaned completely with no residual flux.
● Do not use strong acidic flux (with chlorine content exceeding 0.20wt%)
● Do not use water-soluble flux.

For additional mounting methods, please contact Murata.

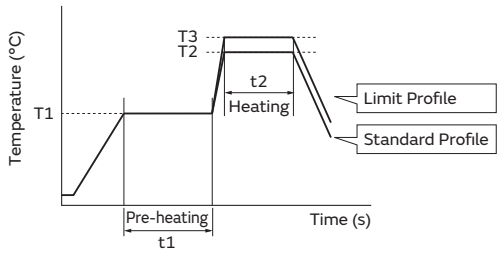
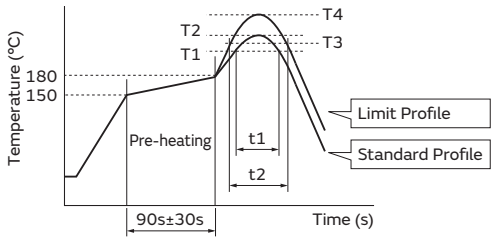
(2) Soldering Profile

●Flow Soldering Profile
(Sn-3.0Ag-0.5Cu Solder)



Series	Pre-heating		Standard Profile			Limit Profile		
			Heating		Cycle of Flow	Heating		Cycle of Flow
	Temp. (T1)	Time. (t1)	Temp. (T2)	Time. (t2)		Temp. (T3)	Time. (t2)	
BLM (Except for BLM03/15/18G/18AG_W/31KN) **BLE**	150°C	60s min.	250°C	4 to 6s	2 times max.	265±3°C	5s max.	2 times max.

●Reflow Soldering Profile
(Sn-3.0Ag-0.5Cu Solder)



Series	Standard Profile				Limit Profile			
	Heating		Peak Temperature (T2)	Cycle of Reflow	Heating		Peak Temperature (T4)	Cycle of Reflow
	Temp. (T1)	Time. (t1)			Temp. (T3)	Time. (t2)		
BLM (Except for BLM18AG_W) BLE	220°C min.	30 to 60s	245±3°C	2 times max.	230°C min.	60s max.	260°C/10s	2 times max.

(3) Reworking with Solder Iron

The following conditions must be strictly followed when using a soldering iron.
Pre-heating: 150°C 60s min.
Soldering iron power output / Tip diameter:
80W max. / ø3mm max.
Temperature of soldering iron tip / Soldering time / Times:
350°C max. / 3-4s / 2 times
Do not allow the tip of the soldering iron to directly contact the chip.
For additional methods of reworking with a soldering iron, please contact Murata engineering.

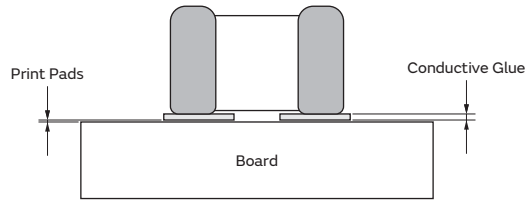
4. Mounting on-board with Conductive Glue of BLM18AG□□□WH1

Please adhere rigidly to the condition below which shows the method of mounting with conductive glue.
Please coat print pads with conductive glue using metal mask and metal squeegee, and then mount our products on the substrates with a mount machine or human hand.
Please put the substrates into an oven (140 to 150°C) for 30 minutes in order to cure the adhesive.
Please check whether the chips and the substrates are connected with the conductive glue or not and there is no electrical short of the conductive glue.



1. Board	Ceramic Board or Alumina Board
2. Thickness of Glue	30 to 50μm
3. Recommended Conductive Glue	PC3000 (Manufactured by Heraeus)

5. Cleaning

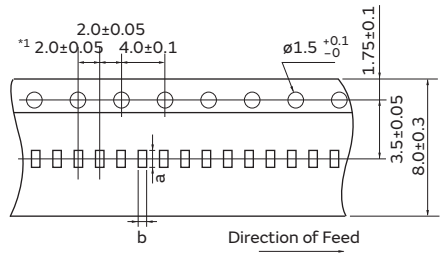
Following conditions should be observed when cleaning chip ferrite beads.

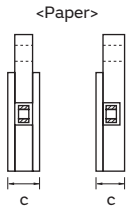
(1) Cleaning Temperature: 60°C max. (40°C max. for alcohol type cleaner)
(2) Ultrasonic
Output: 20W/liter max.
Duration: 5 minutes max.
Frequency: 28 to 40kHz
(3) Cleaning Agent
The following list of cleaning agents have been tested on the individual components. Evaluation of final assembly should be completed prior to production.
Do not clean BLM18AG□□□WH1 series. Before cleaning, please contact Murata engineering.
(a) Alcohol cleaning agent
Isopropyl alcohol (IPA)
(b) Aqueous cleaning agent
Pine Alpha ST-100S
(4) Ensure that flux residue is completely removed. Component should be thoroughly dried after aqueous agent has been removed with deionized water.
(5) BLM□□G type is processed with resin. On rinsing the product, using water for ultrasonic cleaning may affect the resin quality used for the product by water element. In case of set cleaning conditions, please make sure the reliability according to the cleaning conditions.

For additional cleaning methods, please contact Murata engineering.

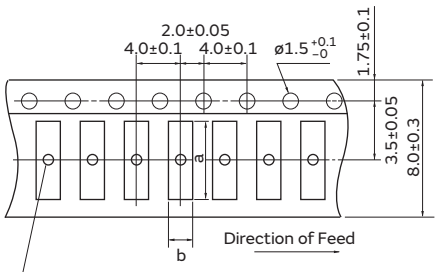
Chip Ferrite Bead (BL□ Series) Packaging

Minimum Quantity and Dimensions of 8mm Width Paper / Embossed Tape





*1 BLM18S/18T/BLA2A: 2.0±0.1



There are holes in the cavities of the BLM21BD222S□1/BD272S□1 and BLM31 only. ø1.0 +0.3 -0.

Please apply the derating curve shown in chart according to the operating temperature.

Derating of Rated Current

Chip EMIFIL® (NF□ Series) ⚠Caution/Notice

⚠Caution

Rating

1. About the Rated Current
   Do not use products beyond the rated current and rated voltage as this may create excessive heat and deteriorate the insulation resistance.
2. About the Excessive Surge Current (NFZ Series)
   Excessive surge current (pulse current or rush current) than specified rated current applied to the product may cause a critical failure, such as an open circuit, burnout caused by excessive temperature rise. Please contact us in advance in case of applying the surge current.

Soldering and Mounting

1. Be sure to provide an appropriate fail-safe function on your product to prevent a second damage that may be caused by the abnormal function or the failure our product.

Notice

Storage and Operating Condition

<Operating Environment>
Do not use products in the corrodible atmosphere such as acidic gases, alkaline gases, chlorine, sulfur gases, organic gases. (the sea breeze, Cl_2, H_2S, NH_3, SO_2, NO_2,etc)
Do not use products in the environment close to the organic solvent.
<Storage and Handling Requirements>
1. Storage Period
   The NF series should be used within 12 months. Products to be used after this period should be checked for solderability or bondability with glue.
2. Storage Conditions
   (1) Storage temperature: -10 to +40˚C
   Relative humidity: 15 to 85%
   Avoid sudden changes in temperature and humidity.
   (2) Do not store products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.

Notice (Soldering and Mounting)

1. Cleaning
   Failure and degradation of a product are caused by the cleaning method. When you clean in conditions that are not in mounting information, please contact Murata engineering.
2. Soldering
   Reliability decreases with improper soldering methods. Please solder by the standard soldering conditions shown in mounting information.
3. Other
   Noise suppression levels resulting from Murata's EMI suppression filters EMIFIL® may vary, depending on the circuits and ICs used, type of noise, mounting pattern, mounting location, and other operating conditions. Be sure to check and confirm in advance the noise suppression effect of each filter, in actual circuits, etc. before applying the filter in a commercial-purpose equipment design.

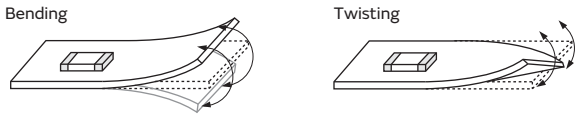
Chip EMIFIL® (NF□ Series) ⚠Caution/Notice

Continued from the preceding page.↘

Handling

1. Resin Coating (Except for NFZ Series)
   Using resin for coating/molding products may affect the products performance.
   So please pay careful attention in selecting resin.
   Prior to use, please make the reliability evaluation with the product mounted in your application set.
   Resin Coating (NFZ_W Series)
   To prevent breaking the wire, avoid touching with sharp material, such as tweezers or other material such as bristles of cleaning brush, to the wire wound portion of this product. To prevent breaking the core, avoid applying excessive mechanical shock to products mounted on the board. An open circuit issue may occur by mechanical stress caused by the resin, amount/cured shape of resin, or operating condition etc. Some resins containing impurities or chloride may possibly.

2. Handling of a Substrate
   After mounting products on a substrate, do not apply any stress to the product caused by bending or twisting to the substrate when cropping the substrate, inserting and removing a connector from the substrate or tightening screw to the substrate.
   Excessive mechanical stress may cause cracking in the Product.



Chip EMIFIL® (NF□ Series) Soldering and Mounting

1. Standard Land Pattern Dimensions

NF□ series suppress noise by conducting the high-frequency noise element to ground. Therefore, to obtain maximum performance from these filters, the ground pattern should be made as large as possible during the PCB design stage. As shown below, one side of the PCB is used for chip mounting, and the other is used for grounding.
Small diameter feedthrough holes are then used to connect the grounds on each side of the PCB. This reduces the high-frequency impedance of the grounding and maximizes the filter's performance.

Land Pattern + Solder Resist
Land Pattern
Solder Resist
(in mm)

Series	Standard Land Dimensions
NFL18ZT	● Reflow Soldering NFL18ZT NFE31ZT	● Reflow Soldering NFE31ZT NFE61HT	● Reflow Soldering  ● Flow Soldering (Except for NFE61HT332) NFZ18SM	● Reflow Soldering

Land Pattern
Solder Resist

(in mm)

Series	Standard Land Dimensions
NFZ32BW	● Reflow Soldering  ●Flow Soldering NFZ5BBW	●Reflow Soldering  ●Flow Soldering 
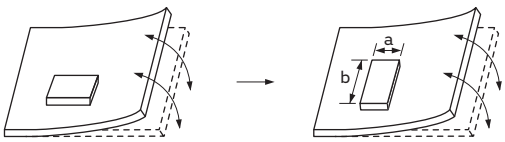
(1) PCB Warping

PCB should be designed so that products are not subjected to the mechanical stress caused by warping the board.

Products should be located in the sideways direction (Length: a<b) to the mechanical stress.



Poor example　　Good example

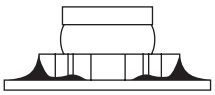
(2) Amount of Solder Paste

Excessive solder causes electrode corrosion, while insufficient solder causes low electrode bonding strength. Adjust the amount of solder paste as shown on the right so that solder is applied.

●Guideline of solder paste thickness

· NFZ32BW / 5BBW: 100 to 150μm

· NFZ18SM: 100 to 200μm



NFZ32BW

Continued on the following page.↗

Chip EMIFIL® (NF□ Series) Soldering and Mounting

Continued from the preceding page.↘

2. Solder Paste Printing and Adhesive Application

When reflow soldering the chip EMI suppression filter, the printing must be conducted in accordance with the following cream solder printing conditions.
If too much solder is applied, the chip will be prone to damage by mechanical and thermal stress from the PCB and may crack.
Standard land dimensions should be used for resist and copper foil patterns.

When flow soldering the EMI suppression filter, apply the adhesive in accordance with the following conditions.
If too much adhesive is applied, then it may overflow into the land or termination areas and yield poor solderability.
In contrast, if insufficient adhesive is applied, or if the adhesive is not sufficiently hardened, then the chip may become detached during flow soldering process.

(in mm)

Series	Solder Paste Printing	Adhesive Application
NFL18ZT	●Guideline of solder paste thickness: 100-150μm 	
NFE31ZT	●Guideline of solder paste thickness: 150-200μm 	
NFE61HT	●Guideline of solder paste thickness: 150-200μm 	Apply 1.0mg of bonding agent at each chip.  * Except for NFE61HT332
NFZ5BBW		Amount of adhesive applied is a standard 1/2 to 2/3 of the bottom flange thickness.  Adhesive application is recommended the 3-point application. (prevent the drop of products) 
Continued on the following page.↗

Chip EMIFIL® (NF□ Series) Soldering and Mounting

Continued from the preceding page.↘

3. Standard Soldering Conditions

(1) Soldering Methods

Use flow and reflow soldering methods only.
Use standard soldering conditions when soldering chip EMI suppression filters.
In cases where several different parts are soldered, each having different soldering conditions, use those conditions requiring the least heat and minimum time.

Solder: Use Sn-3.0Ag-0.5Cu solder. Use of Sn-Zn based solder will deteriorate performance of products. If using NFM series with Sn-Zn based solder, please contact Murata in advance.

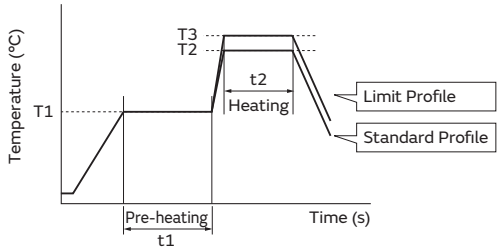
Flux:

- Use Rosin-based flux.
  In case of using RA type solder, products should be cleaned completely with no residual flux.
- Do not use strong acidic flux (with chlorine content exceeding 0.20wt%)
- Do not use water-soluble flux.

For additional mounting methods, please contact Murata.

(2) Soldering Profile

●Flow Soldering Profile
(Sn-3.0Ag-0.5Cu Solder)



Series	Pre-heating		Standard Profile			Limit Profile		
			Heating		Cycle of Flow	Heating		Cycle of Flow
	Temp. (T1)	Time. (t1)	Temp. (T2)	Time. (t2)		Temp. (T3)	Time. (t2)

Chip EMIFIL® (NF□ Series) Soldering and Mounting

Continued from the preceding page.↘

(3) Reworking with Solder Iron

The following conditions must be strictly followed when using a soldering iron.

Pre-heating: 150°C 60s min.

Soldering iron power output / Tip diameter:

30W max. / ø3mm max.*1

*1 NFZ18SM/32/5BBW: 80W max. / ø3mm max.

Temperature of soldering iron tip / Soldering time / Times:

350°C max. / 3-4s / 2 times*2

*2 NFE31ZT152Z1E9□: 280°C max. / 10s max.
NFZ5BBW: 380°C max. /3-4s

Do not allow the tip of the soldering iron to directly contact the chip.

For additional methods of reworking with a soldering iron, please contact Murata engineering.

4. Cleaning

Following conditions should be observed when cleaning chip EMI filter.

(1) Cleaning Temperature: 60°C max. (40°C max. for alcohol type cleaner)

(2) Ultrasonic

Output: 20W/liter max.

Duration: 5 minutes max.

Frequency: 28 to 40kHz

Care should be taken not to cause resonance of the PCB and mounted products.

(3) Cleaning Agent

The following list of cleaning agents have been tested on the individual components. Evaluation of final assembly should be completed prior to production.

(a) Alcohol cleaning agent

Isopropyl alcohol (IPA)

(b) Aqueous cleaning agent

Pine Alpha ST-100S

(4) Ensure that flux residue is completely removed.

Component should be thoroughly dried after aqueous agent has been removed with deionized water.

Chip Common Mode Choke Coil (DL□ Series) ⚠Caution/Notice

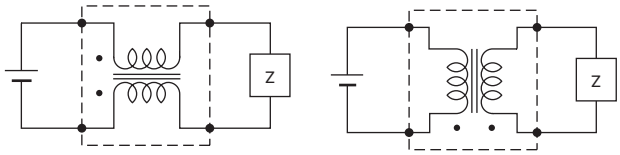
⚠Caution

Rating

Do not use products beyond the rated current and rated voltage as this may create excessive heat and deteriorate the insulation resistance. Be sure to provide an appropriate fail-safe function on your product to prevent a second damage that may be caused by the abnormal function or the failure our product.

Soldering and Mounting

1. Self-heating
   Please provide special attention when mounting chip common mode choke coils DLW5 series in close proximity to other products that radiate heat.
   The heat generated by other products may deteriorate the insulation resistance and cause excessive heat in this component.
2. Mounting Direction
   Mount Chip Common Mode Choke Coils in right direction.
   Wrong direction, which is 90 degrees rotated from right direction, causes not only open or short circuit but also flames or other serious trouble.



right direction　　wrong direction

Notice

Storage and Operating Condition

<Operating Environment>
Do not use products in the corrodible atmosphere such as acidic gases, alkaline gases, chlorine, sulfur gases, organic gases. (the sea breeze, Cl_2, H_2S, NH_3, SO_2, NO_2,etc)
Do not use products in the environment close to the organic solvent.
<Storage and Handling Requirements>
1. Storage Period
   The DL series should be used within 12 months. Solderability should be checked if this period is exceeded.
2. Storage Conditions
   (1) Storage temperature: -10 to +40˚C
   Relative humidity: 15 to 85%
   Avoid sudden changes in temperature and humidity.
   (2) Do not store products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.

Notice (Soldering and Mounting)

1. Cleaning
   Failure and degradation of a product are caused by the cleaning method. When you clean in conditions that are not in mounting information, please contact Murata engineering.
2. Soldering
   Reliability decreases with improper soldering methods. Please solder by the standard soldering conditions shown in mounting information.
3. Other
   Noise suppression levels resulting from Murata's EMI suppression filters EMIFIL® may vary, depending on the circuits and ICs used, type of noise, mounting pattern, mounting location, and other operating conditions. Be sure to check and confirm in advance the noise suppression effect of each filter, in actual circuits, etc. before applying the filter in a commercial-purpose equipment design.

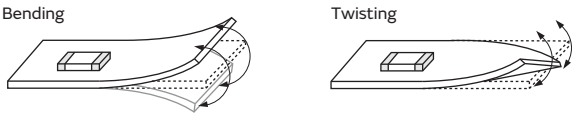
Chip Common Mode Choke Coil (DL□ Series) ⚠Caution/Notice

Continued from the preceding page.↘

Handling

1. Resin Coating (Except for DLW Series.)
   Using resin for coating/molding products may affect the products performance.
   So please pay careful attention in selecting resin.
   Prior to use, please make the reliability evaluation with the product mounted in your application set.
2. Resin Coating (DLW31S Series)
   Do not make any resin coating DLW31S series.
   The impedance value may change due to high cure-stress of resin to be used for coating/molding products.
   An open circuit issue may occur by mechanical stress caused by the resin, amount/cured shape of resin, or operating condition etc. Some resin contains some impurities or chloride possible to generate chlorine by hydrolysis under some operating condition may cause corrosion of wire of coil, leading to open circuit.
   So, please pay your careful attention in selecting resin in case of coating/molding the products with the resin.
3. Resin Coating (Except DLW31S Series)
   The impedance value may change due to high cure-stress of resin to be used for coating/molding products. An open circuit issue may occur by mechanical stress caused by the resin, amount/cured shape of resin, or operating condition etc. Some resin contains some impurities or chloride possible to generate chlorine by hydrolysis under some operating condition may cause corrosion of wire of coil, leading to open circuit.
   So, please pay your careful attention in selecting resin in case of coating/molding the products with the resin. Prior to use the coating resin, please make sure no reliability issue is observed by evaluating products mounted on your board.
4. Caution for Use (DLW Series)
   When you hold products with a tweezer, please hold by the sides. Sharp materials, such as a pair of tweezers, should not touch the winding portion to prevent breaking the wire. Mechanical shock should not be applied to the products mounted on the board to prevent breaking the core.
5. Brushing (DLW21S/31S/32S/43S/43M Series)
   When you clean the neighborhood of products such as connector pins, bristles of cleaning brush shall not be touched to the winding portion of this product to prevent the breaking of wire.
6. Handling of a Substrate
   After mounting products on a substrate, do not apply any stress to the product caused by bending or twisting to the substrate when cropping the substrate, inserting and removing a connector from the substrate or tightening screw to the substrate. Excessive mechanical stress may cause cracking in the Product.



Chip Common Mode Choke Coil (PL□ Series) ⚠Caution/Notice

⚠Caution

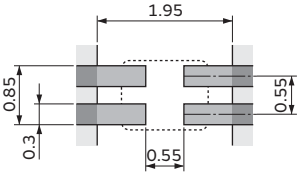
Chip Common Mode Choke Coil (DL□ Series) Soldering and Mounting

1. Standard Land Pattern Dimensions

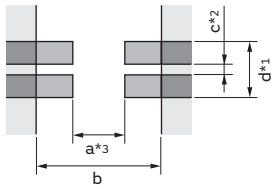
Land Pattern + Solder Resist
Land Pattern Solder Resist
(in mm)

Series	Standard Land Dimensions
DLM11S **DLW21S** **DLW31S** **DLW32S** **DLW43S** **DLW43M** **DLW5A** **DLW5B**	●Reflow Soldering

DLM11S



DLW21S/31S/32S/43S



Series	a	b	c	d
DLW21S/H	0.8	2.6	0.4	1.2
DLW31S	1.6	3.7	0.4	1.6
DLW32S	2.0	4.1	0.4	1.6
DLW43SH110/220/510	3.0	5.9	1.6	3.4
DLW43SH101	3.2	5.9	1.6	3.4
DLW43MH	3.5	5.9	0.7	2.1

*1: If the pattern is made with wider than 1.2mm (DLW21) / 1.6mm (DLW31S) it may result in components turning around, because melting speed is different. In the worst case, short circuit between lines may occur.
*2: If the pattern is made with less than specified dimensions, in the worst case, short circuit between lines may occur due to spread of soldering paste or mount placing accuracy.
*3: If the pattern is made with wider than 0.8mm (DLW21) / 1.6mm (DLW31SN), the bending strength will be reduced. Moreover, if the pattern is made with less than "a" dimension, in the worst case short circuit may be occurred. (DLW43S)
Do not use gild pattern; excess soldering heat may dissolve metal of a copper wire.

Chip Common Mode Choke Coil (DL☐ Series) Soldering and Mounting

Continued from the preceding page.↘

2. Solder Paste Printing and Adhesive Application

When reflow soldering the chip common mode choke coils, the printing must be conducted in accordance with the following cream solder printing conditions.
If too much solder is applied, the chip will be prone to damage by mechanical and thermal stress from the PCB and may crack.
Standard land dimensions should be used for resist and copper foil patterns.

When flow soldering the chip common mode choke coils, apply the adhesive in accordance with the following conditions.
If too much adhesive is applied, then it may overflow into the land or termination areas and yield poor solderability. In contrast, if insufficient adhesive is applied, or if the adhesive is not sufficiently hardened, then the chip may become detached during flow soldering process.

(in mm)

Series	Solder Paste Printing	Adhesive Application

3. Standard Soldering Conditions

(1) Soldering Methods

Use flow and reflow soldering methods only.
Use standard soldering conditions when soldering chip common mode choke coils.
In cases where several different parts are soldered, each having different soldering conditions, use those conditions requiring the least heat and minimum time.

Solder: Use Sn-3.0Ag-0.5Cu solder. Use of Sn-Zn based solder will deteriorate performance of products.
If using DLM series with Sn-Zn based solder, please contact Murata in advance.

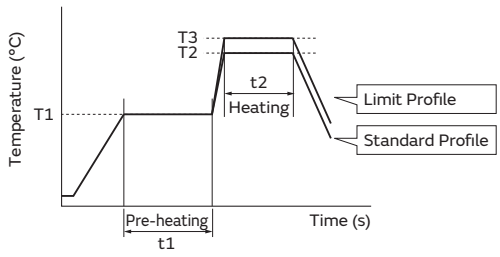
Flux:

- Use Rosin-based flux.
  In case of DLW21/31/43 series, use Rosin-based flux with converting chlorine content of 0.06 to 0.1wt%.
  In case of using RA type solder, products should be cleaned completely with no residual flux.
- Do not use strong acidic flux (with chlorine content exceeding 0.20wt%)
- Do not use water-soluble flux.

For additional mounting methods, please contact Murata.

(2) Soldering Profile

●Flow Soldering Profile
(Sn-3.0Ag-0.5Cu Solder)



Series	Pre-heating		Standard Profile			Limit Profile		
			Heating		Cycle of Flow	Heating		Cycle of Flow
	Temp. (T1)	Time. (t1)	Temp. (T2)	Time. (t2)		Temp. (T3)	Time. (t2)

Chip Common Mode Choke Coil (DL□ Series) Soldering and Mounting

Continued from the preceding page.↘

(3) Reworking with Solder Iron

The following conditions must be strictly followed when using a soldering iron.

Pre-heating: 150°C 60s min.

Soldering iron power output / Tip diameter:

30W max. / ø3mm max.

Temperature of soldering iron tip / Soldering time / Times:

350°C max. / 3-4s / 2 times*1

*1 DLW31S/DLW43S: 350°C max. / 3s / 2 times

Do not allow the tip of the soldering iron to directly contact the chip.

For additional methods of reworking with a soldering iron, please contact Murata engineering.

4. Cleaning

Following conditions should be observed when cleaning chip EMI filter.

Do not clean DLW series.

(1) Cleaning Temperature: 60°C max. (40°C max. for alcohol type cleaner)

(2) Ultrasonic

Output: 20W/liter max.

Duration: 5 minutes max.

Frequency: 28 to 40kHz

(3) Cleaning agent

The following list of cleaning agents have been tested on the individual components. Evaluation of final assembly should be completed prior to production.

Before cleaning, please contact Murata engineering.

(a) Alcohol cleaning agent

Isopropyl alcohol (IPA)

(b) Aqueous cleaning agent

Pine Alpha ST-100S

(4) Ensure that flux residue is completely removed.

Component should be thoroughly dried after aqueous agent has been removed with deionized water.

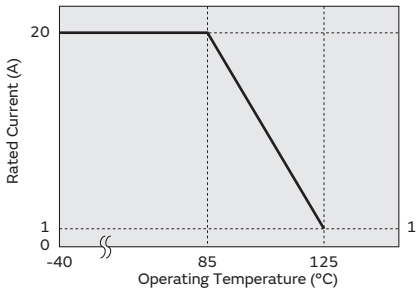
Derating of Rated Current

In operating temperature exceeding +85°C, derating of current is necessary for BNX024H/025H/026H/027H series. Please apply the derating curve shown in chart according to the operating temperature.

Derating of Rated Current



Block Type EMIFIL® SMD Type (BNX Series) ⚠Caution/Notice

⚠Caution

Rating

Do not use products beyond the rated current and rated voltage as this may create excessive heat and deteriorate the insulation resistance.

Fail-safe

Be sure to provide an appropriate fail-safe function on your product to prevent a second damage that may be caused by the abnormal function or the failure of our product.

ESD

ESD to this product, exceeding condition of IEC61000-4-2 with 30kV, may cause short circuit and fuming or firing.

Notice

Storage and Operating Conditions

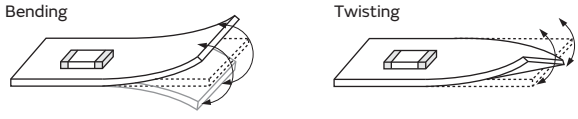
<Operating Environment>
Do not use products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.
Do not use products in the environment close to the organic solvent.
<Storage and Handling Requirements>
1. Storage Period
BNX series should be used within 12 months. Solderability should be checked if this period is exceeded.
2. Storage Conditions
(1) Storage temperature: -10 to +40°C
Relative humidity: 15 to 85%
Avoid sudden changes in temperature and humidity.
(2) Do not store products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.

Notice (Soldering and Mounting)

1. Cleaning
Do not clean BNX series (SMD Type).
2. Soldering
Reliability decreases with improper soldering methods. Please solder by the standard soldering conditions shown in mounting information.
3. Other
Noise suppression levels resulting from Murata's EMI suppression filters EMIFIL® may vary, depending on the circuits and ICs used, type of noise, mounting pattern, mounting location, and other operating conditions. Be sure to check and confirm in advance the noise suppression effect of each filter, in actual circuits, etc. before applying the filter in a commercial-purpose equipment design.

Handling

1. Resin Coating
Using resin for coating/molding products may affect the products performance.
So please pay careful attention in selecting resin.
Prior to use, please make the reliability evaluation with the product mounted in your application set.
2. Handling of a Substrate (for BNX02□)
After mounting products on a substrate, do not apply any stress to the product caused by bending or twisting to the substrate when cropping the substrate, inserting and removing a connector from the substrate or tightening screw to the substrate.
Excessive mechanical stress may cause cracking in the Product.



Block Type EMIFIL® SMD Type (BNX Series) Soldering and Mounting

1. Standard Land Pattern Dimensions

Land Pattern + Solder Resist
Land Pattern
Solder Resist
Through Hole

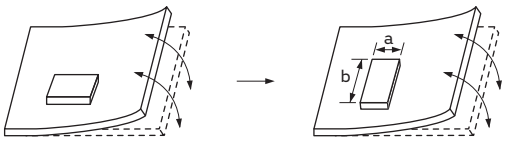
(in mm)

Series	Standard Land Dimensions
BNX02□	
(1) A double-sided print board (or multilayer board) as shown in the left figure is designed, and please apply a soldering Cu electrode with a product electrode to a "Land Pattern", apply resist to a "Land Pattern + Solder Resist" at Cu electrode.
(2) This product is designed to meet large current. Please design PCB pattern which is connected to this product not to become too hot by applied large current.
(3) Please drop CG on a ground electrode on the back layer (the same also in a multilayer case) by the through hole. And a surface to ground electrode layer may also take a large area as much as possible.
(4) It is recommended to use a double-sided printed circuit board with BNX mounting on one side and the ground pattern on the other in order to maximize filtering performance, multiple feed through holes are required to maximize the BNX's connection to ground.
(5) The ground pattern should be designed to be as large as possible to achieve maximum filtering performance.

● PCB Warping (for BNX02□)

PCB should be designed so that products are not subjected to the mechanical stress caused by warping the board.

Products should be located in the sideways direction (Length: a<b) to the mechanical stress.



Poor example　　Good example

2. Solder Paste Printing and Adhesive Application

When reflow soldering the block type EMIFIL®, the printing must be conducted in accordance with the following cream solder printing conditions.
If too much solder is applied, the chip will be prone to damage by mechanical and thermal stress from the PCB and may crack.

Standard land dimensions should be used for resist and copper foil patterns.

Series	Solder Paste Printing	Adhesive Application
BNX02□	●Guideline of solder paste thickness: 150-200μm 	
Continued on the following page.↗

Block Type EMIFIL® SMD Type (BNX Series) Soldering and Mounting

Continued from the preceding page.↘

3. Standard Soldering Conditions

(1) Soldering Methods

Use reflow soldering methods only.
Use standard soldering conditions when soldering block type EMIFIL® SMD type.
In cases where several different parts are soldered, each having different soldering conditions, use those conditions requiring the least heat and minimum time.

Solder: Use Sn-3.0Ag-0.5Cu solder. Use of Sn-Zn based solder will deteriorate performance of products.

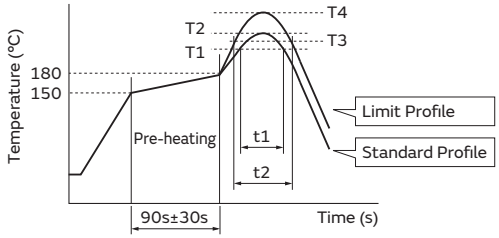
Flux:

- Use Rosin-based flux.
  In case of using RA type solder, products should be cleaned completely with no residual flux.
- Do not use strong acidic flux (with chlorine content exceeding 0.20wt%)
- Do not use water-soluble flux.

For additional mounting methods, please contact Murata.

(2) Soldering Profile

●Reflow Soldering Profile
(Sn-3.0Ag-0.5Cu solder)



Series	Standard Profile				Limit Profile			
	Heating		Peak Temperature (T2)	Cycle of Reflow	Heating		Peak Temperature (T4)	Cycle of Reflow
	Temp. (T1)	Time. (t1)			Temp. (T3)	Time. (t2)		
BNX02□	220°C min.	30 to 60s	250±3°C	2 times max.	230°C min.	60s max.	260°C/10s	2 times max.

(3) Reworking with Solder Iron

The following conditions must be strictly followed when using a soldering iron.
Pre-heating: 150°C 60s min.
Soldering iron power output: 100W max.
Temperature of soldering iron tip / Soldering time / Times:
450°C max. / 5s max. / 2 time

Do not allow the tip of the soldering iron to directly contact the chip.
For additional methods of reworking with a soldering iron, please contact Murata engineering.

4. Cleaning

Do not clean BNX02□ series, or inner humidity protect material will be damaged, results product's insulation resistance getting worse.

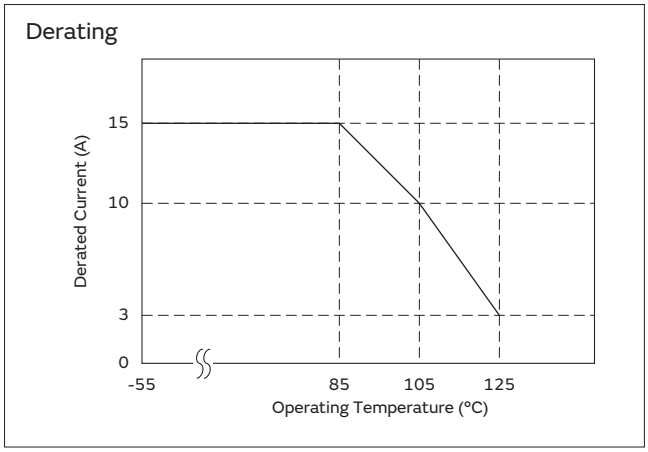
Derating of Rated current

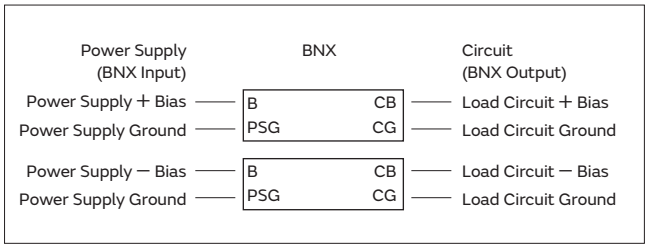
● Rating

In operating temperatures exceeding +85°C, derating of current is necessary for BNX012H series. Please apply the derating curve shown in chart according to the operating temperature.



● Connecting ± Power Line

In case of using ± power line, please connect to each terminal as shown.



Leaded Multilayer Ferrite Beads (BLL□ Series) ⚠Caution/Notice

⚠Caution

Rating

Do not use products beyond the rated current as this may create excessive heat and deteriorate the insulation resistance.

Soldering and Mounting

1. Bonding, resin molding and coating
In case of bonding, molding or coating this product, verify that these processes do not affect the quality of the capacitor by testing the performance of the bonded, molded or coated product in the intended equipment.
In case the amount of application, dryness / hardening conditions of adhesives and molding resins containing organic solvents (ethyl acetate, methyl ethyl ketone, toluene, etc.) are unsuitable, the outer coating resin of a capacitor may be damaged by the organic solvents and may result, worst case, in a short circuit.
The variation in thickness of adhesive or molding resin or coating may cause an outer coating resins cracking and / or ceramic element cracking of this product in a temperature cycling.

2. Treatment after bonding, resin molding and coating
When the outer coating is hot (over 100 degrees centigrade) after soldering, it becomes soft san fragile, so please be careful not to give it mechanical stress.

3. Mounting holes
Mounting holes should be designed as specified in this specifications.
Or different design from this specifications may cause cracks in ceramics which may lead to smoking / firing.

4. Caution for the product angle adjust work
Take care not to apply any mechanical stress to product body at the lead terminal bending process for product angle adjustment after insertion.

Notice

Storage and Operating Condition

1. Operating Environment
(1) Do not use products in corrosive gases such as chlorine gas, acid or sulfide gas.
(2) Do not use products in the environment where water, oil or organic solvents may adhere to products.
(3) Do not adhere any resin to products, coat nor mold products with any resin (including adhesive) to prevent mechanical and chemical stress on products.

2. Storage period
Use the products within 12 months after delivered.
Solderability should be checked if this period is exceeded.

3. Storage Conditions
(1) Storage temperature: -10 to +40 degree C
Relative humidity: 15 to 85%
Avoid sudden changes in temperature and humidity.
(2) Do not store products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.

Soldering and Mounting

1. Washing
Failure and degradation of a product are causedby the washing method. When you wash in conditions that are not in the mounting information, please contact Murata engineering.

2. Soldering
Reliability decreases with improper soldering methods. Please solder by the standard soldering conditions shown in the mounting information.

EMIFIL® Lead Type (DS□/VF□ Series) ⚠Caution/Notice

⚠Caution

Rating

1. Do not use products beyond the rated current and rated voltage as this may create excessive heat and deteriorate the insulation resistance.
2. Products should not be applied for the absorption of surge which have large energy (ex. Included lighting surge, switching surges) because it is designed for the absorption of electrostatic surges, or it results cracks in ceramics which may lead to smoking / firing.

Soldering and Mounting

1. Mounting holes should be designed as specified in these specifications. Other designs than those shown in these specifications may cause cracks in ceramics that may lead to smoking or firing.
2. Take care not to apply any mechanical stress to product body at the lead terminal bending process for product angle adjustment after insertion.

Notice

Storage and Operating Conditions

<Operating Environment>
1. Do not use products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.
2. Do not use products near water, oil or organic solvents. Avoid environments where dust or dirt may adhere to the product.
3. Do not adhere any resin to products, coat nor mold products with any resin (including adhesive) to prevent mechanical and chemical stress on products.

<Storage and Handling Requirements>
1. Storage Period
Use the products within 12 months after delivery. Solderability should be checked if this period is exceeded.
2. Storage Conditions
(1) Storage temperature: -10 to 40 degrees C
Relative humidity: 15 to 85%
Avoid sudden changes in temperature and humidity.
(2) Do not store products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.

<Using EMIGUARD® effectively>
1. Products should be used at rated voltage or less and rated current or less.

Soldering and Mounting

1. Washing
Failure and degradation of a product are causedby the washing method. When you wash in conditions that are not in the mounting information, please contact Murata engineering.
2. Soldering
Reliability decreases with improper soldering methods. Please solder by the standard soldering conditions shown in the mounting information.
3. Other
Noise suppression levels resulting from Murata's EMI suppression filters EMIFIL® may vary, depending on the circuits and ICs used, type of noise, mounting pattern, lead wire length, mounting location, and other operating conditions. Be sure to check and confirm in advance the noise suppression effect of each filter, in actual circuits, etc. before applying the filter in a commercial-purpose equipment design.

Block Type EMIFIL® Lead Type (BNX Series) ⚠Caution/Notice

⚠Caution

Rating

Do not use products beyond the rated current and rated voltage as this may create excessive heat and deteriorate the insulation resistance.

Fail-safe

Be sure to provide an appropriate fail-safe function on your product to prevent a second damage that may be caused by the abnormal function or the failure of our product.

Notice

Storage and Operating Conditions

<Operating Environment>
1. Do not use products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.
2. Do not use products near water, oil or organic solvents.

<Storage and Handling Requirements>
1. Storage Period
BNX Series should be used within 12 months.
Solderability should be checked if this period is exceeded.

2. Storage Conditions
(1) Storage temperature: -10 to +40°C
Relative humidity: 15 to 85%
Avoid sudden changes in temperature and humidity.
(2) Do not store products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.

Notice (Soldering and Mounting)

1. Cleaning
Failure and degradation of a product are caused by the cleaning method. When you clean in conditions that are not in mounting information, please contact Murata engineering.
2. Soldering
Reliability decreases with improper soldering methods. Please solder by the standard soldering conditions shown in mounting information.
3. Other
Noise suppression levels resulting from Murata's EMI suppression filters "EMIFIL" may vary, depending on the circuits and ICs used, type of noise, mounting pattern, lead wire length, mounting location, and other operating conditions. Be sure to check and confirm in advance the noise suppression effect of each filter, in actual circuits, etc. before applying the filter in a commercial-purpose equipment design.

Notice (Appearance)

Although some part of the product surface seems to be white in some cases, do not care because it is the result of waxing process for humidity resistance improvement. This wax does not make bad affection to mechanical or electrical performance, reliability of the product.

Leaded Multilayer Ferrite Beads (BLL□ Series) Soldering and Mounting

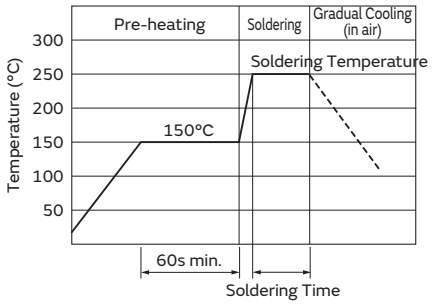
1. Mounting Hole

Mounting holes should be designed as specified below.

(in mm)

Part Number	Bulk Type	Taping Type
BLL		
2. Soldering

(1) Use Sn-3.0Ag-0.5Cu solder.
(2) Use Rosin-based flux. Do not use strong acidic flux with halide content exceeding 0.2wt% (chlorine conversion value).
(3) Products and the leads should not be subjected to any mechanical stress during the soldering process, or while subjected to the equivalent high temperatures.
(4) Standard flow soldering profile.



Solder	Soldering Temperature	Soldering Time
Sn-3.0Ag-0.5Cu solder	250 to 260°C	4 to 6s

3. Cleaning Conditions

(1) Do not clean after soldering. If cleaning, please contact us.

EMIFIL® Lead Type (DS□/VF□ Series) Soldering and Mounting

1. Mounting Hole

Mounting holes should be designed as specified below.

Part Number	Bulk Type (in mm)	Taping Type (in mm)
DSS1		VFC2H		
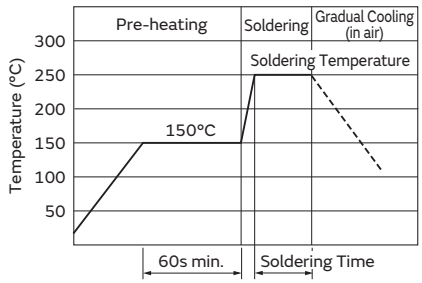
2. Soldering

(1) Use Sn-3.0Ag-0.5Cu solder.
(2) Use Rosin-based flux. Do not use strong acidic flux with halide content exceeding 0.2wt% (chlorine conversion value).
(3) Products and the leads should not be subjected to any mechanical stress during the soldering process, or while subjected to the equivalent high temperatures.
(4) Standard flow soldering profile.



Solder	Soldering Temperature	Soldering Time
Sn-3.0Ag-0.5Cu solder	250 to 260°C	4 to 6s

3. Cleaning Conditions

Clean other parts in the following conditions.
(1) Cleaning temperature should be limited to 60°C max. (40°C max for alcohol type cleaner).
(2) Ultrasonic cleaning should comply with the following conditions, avoiding the resonance phenomenon at the mounted products and PCB.
Power: 20 W / l max. Frequency: 28 to 40kHz
Time: 5 min. max.
(3) Cleaner
(a) Alcohol type cleaner
Isopropyl alcohol (IPA)
(b) Aqueous agent (VFC2 series cannot be cleaned)
PINE ALPHA ST-100S
(4) There should be no residual flux or residual cleaner left after cleaning.
In the case of using aqueous agent, products should be dried completely after rinsing with de-ionized water in order to remove the cleaner.
(5) The surface of products may become dirty after cleaning, but there is no deterioration on mechanical, electrical characteristics and reliability.
(6) Other cleaning: Please contact us.

Block Type EMIFIL® Lead Type (BNX Series) Soldering and Mounting

1. Mounting Hole

■ Mounting holes should be designed as specified below.

Series	Mounting Hole
BNX01□	Component Side  Terminal Layout (Bottom figure)  PSG: Power supply ground CG: Load circuit ground CB: Load circuit + Bias

2. Using the Block Type EMIFIL® (Lead Type) Effectively

(1) How to use effectively

This product effectively prevents undesired radiation and external noise from going out / entering the circuit by grounding the high frequency components which cause noise problems. Therefore, grounding conditions may affect the performance of the filter and attention should be paid to the following for effective use.

(a) Design maximized grounding area in the P.C. board, and grounding pattern for all the grounding terminals of the product to be connected. (Please follow the specified recommendations.)

(b) Minimize the distance between ground of the P.C. board and the ground plate of the product. (Recommend using the through hole connection between grounding area both of component side and bottom side.)

(c) Insert the terminals into the holes on P.C. board completely.

(d) Don't connect PSG terminal with CG terminal directly. (See the item 1. Terminal Layout)

(2) Self-heating

Though this product has a large rated current, localized selfheating may be caused depending on soldering conditions. To avoid this, attention should be paid to the following:

(a) Use P.C. board with our recommendation on hole diameter / land pattern dimensions, mentioned in the right hand drawing, especially for 4 terminals which pass current.

(b) Solder the terminals to the P.C. board with soldercover area at least 90%. Otherwise, excess self-heating at connection between terminals and P.C. board may lead to smoke and / or fire of the product even when operating at rated current.

(c) After installing this product in your product, please make sure the self-heating is within the rated current recommended.

P. C. Board Patterns

Use a bilateral P.C. board. Insert the BNX into the P.C.board until the root of the terminal is secured, then solder.

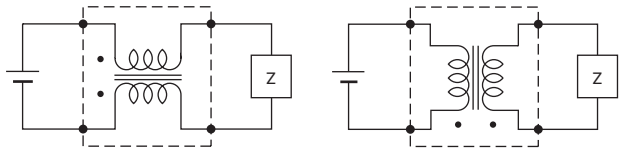
⚠Caution

Rating

Do not use products beyond the rated current and rated voltage as this may create excessive heat and deteriorate the insulation resistance.

Soldering and Mounting

1. Self-heating
   Please provide special attention when mounting chip Micro Chip Transformer (DXW) series in close proximity to other products that radiate heat.
   The heat generated by other products may deteriorate the insulation resistance and cause excessive heat in this component.
2. Mounting Direction
   Mount Micro Chip Transformer in right direction. Wrong direction, which is 90 degree rotated from right direction, the characteristics does not come out as Micro Chip Transformer or causes not only open or short circuit but also flames or other serious trouble.



right direction　　wrong direction

Notice

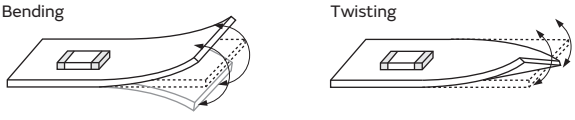
Storage and Operating Conditions

<Operating Environment>
Do not use products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.
<Storage and Handling Requirements>
1. Storage Period
   DXW series should be used within 12 months.
   Solderability should be checked if this period is exceeded.
2. Storage Conditions
   (1) Storage temperature: -10 to +40 degree C
   Relative humidity: 15 to 85%
   Avoid sudden changes in temperature and humidity.
   (2) Do not store products in a chemical atmosphere such as chlorine gas, acid or sulfide gas.

Handling

1. Resin Coating
   The impedance value may change due to high cure-stress of resin to be used for coating/molding products. An open circuit issue may occur by mechanical stress caused by the resin, amount/cured shape of resin, or operating condition etc. Some resin contains some impurities or chloride possible to generate chlorine by hydrolysis under some operating condition may cause corrosion of wire of coil, leading to open circuit.
   So, please pay your careful attention in selecting resin in case of coating/molding the products with the resin. Prior to use the coating resin, please make sure no reliability issue is observed by evaluating products mounted on your board.
2. Handling of a Substrate
   After mounting products on a substrate, do not apply any stress to the product caused by bending or twisting to the substrate when cropping the substrate, inserting and removing a connector from the substrate or tightening screw to the substrate.
   Excessive mechanical stress may cause cracking in the Product.

Bending　　Twisting



Microchip Transformer (Balun) (DX□ Series) Soldering and Mounting

1. Standard Land Pattern Dimensions

Land Pattern + Solder Resist
Land Pattern
Solder Resist

(in mm)

Series	Standard Land Pattern Dimensions
DXW21	●Reflow Soldering DXW21  * 1 : If the pattern is made with wider than 1.2mm (DXW21) it may result in components turning around, because melting speed is different. In the worst case, short circuit between lines may occur. * 2 : If the pattern is made with less than 0.4mm, in the worst case, short circuit between lines may occur due to spread of soldering paste or mount placing accuracy. * 3 : If the pattern is made with wider than 0.8mm (DXW21), the bending strength will be reduced. Do not use gild pattern; excess soldering heat may dissolve metal of a copper wire.

2. Solder Paste Printing and Adhesive Application

When reflow soldering the Micro Chip Transformer, the printing must be conducted in accordance with the following cream solder printing conditions.
If too much solder is applied, the chip will be prone to damage by mechanical and thermal stress from the PCB and may crack. In contrast, if too little solder is applied, there is the potential that the termination strength will be insufficient, creating the potential for detachment.
Standard land dimensions should be used for resist and copper foil patterns.

(in mm)

Series	Solder Paste Printing
DXW21	●Coat the solder paste a thickness: 100-150μm 
3. Standard Soldering Conditions

(1) Soldering Methods

Use reflow soldering methods only.
Use standard soldering conditions when soldering Micro Chip Transformer.
In cases where several different parts are soldered, each having different soldering conditions, use those conditions requiring the least heat and minimum time.

Solder: Use Sn-3.0Ag-0.5Cu solder.
Flux:

- Use Rosin-based flux, (with converting chlorine content 0.06 to 0.1(wt)%.), but not highly acidic flux (with Halogen content exceeding 0.2(wt)% conversion to chlorine).
- Do not use water-soluble flux.

(3) Reworking with Solder Iron

The following conditions must be strictly followed when using a soldering iron.

Pre-heating : 150°C 60s min.

Soldering iron power output : 30W max.

Temperature of soldering iron tip / Soldering time :
350°C max./3s max.

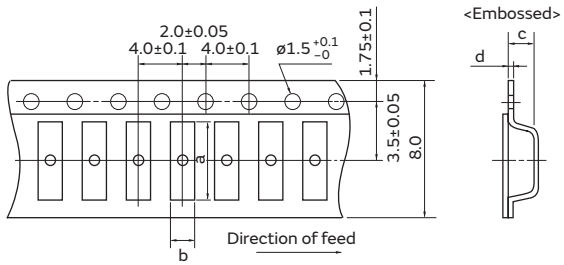
For additional methods of reworking with a soldering iron, please contact Murata engineering.

4. Cleaning

Do not clean.

Microchip Transformer (Balun) (DX□ Series) Packaging

Minimum Quantity and Dimensions of 8mm Width Embossed Tape



Dimension of the cavity is measured at the bottom side.

Part Number	Dimensions				Minimum Qty. (pcs.)

Part Numbering

Inductors for Power Lines for Automotive

(Part Number)

LQ	M	21	P	Z	R54	M	G	0	D
❶	❷	❸	❹	❺	❻	❼	❽	❾	❿

❶Product ID

Product ID	
LQ	Chip Inductors (Chip Coils)

❷Structure

Code	Structure
H	Wire Wound Type (Ferrite Core)
M	Multilayer Type (Ferrite Core)
W	Wire Wound Type (Ferrite Core)

❸Dimensions (LxW)

Code	Nominal Dimensions (LxW)	Size Code (in inch)
18	1.6x0.8mm	0603
21	2.0x1.25mm	0805
2M	2.0x1.6mm	0806
2H	2.5x2.0mm	1008
3N	3.0x3.0mm	1212
32	3.2x2.5mm	1210
43	4.5x3.2mm	1812
44	4.0x4.0mm	1515
5B	5.0x5.0mm	2020

❹Applications and Characteristics

Code	Series	Applications and Characteristics
D	LQH	for Choke
C		for Choke (Coating Type)
P	LQM/LQH	for Power Line
F	LQW	for Choke

❺Category

Code	Series	Category	
Z	LQH/LQM	Automotive	Infotainment
H			Powertrain/Safety
T	LQW	Standard Type	

❻Inductance

Expressed by three-digit alphanumerics. The unit is micro-henry (μH). The first and second figures are significant digits, and the third figure expresses the number of zeros that follow the two figures. If there is a decimal point, it is expressed by the capital letter "**R**." In this case, all figures are significant digits. If inductance is less than 0.1μH, the inductance code is expressed by a combination of two figures and the capital letter "**N**," and the unit of inductance is nano-henry (nH). The capital letter "**N**" indicates the unit of "nH," and also expresses a decimal point. In this case, all figures are significant digits. For those products whose inductance values are specified using three designated digits, these values may be indicated using the closest two digits instead.

❼Inductance Tolerance

Code	Inductance Tolerance
K	±10%
M	±20%
N	±30%

❽Features (Except for **LQH□□P/LQM□□P**)

Code	Features	Series
0	Standard Type	LQW
2	Standard Type	LQH32C/32D
3	Low DC Resistance	
5	Low Profile Type	

❽Thickness

(**LQH□□P/LQM□□P** Only • Except for **LQH43P**)

Code	Nominal Dimensions (T)
C	0.5mm
D	0.6mm
E	0.7mm
F	0.8mm
G	0.9mm
J	1.1mm
M	1.4mm
N	1.55mm
T	2.0mm

❾Electrode (Except for **LQH□□P/LQM□□P**)

•Lead (Pb) Free

Code	Electrode	Series
0	Sn	LQM
3	LF Solder	LQH
H	Automotive Powertrain/Safety	LQW

❾Specification

(**LQH□□P/LQM□□P** Only • Except for **LQH43P**)

Code	Specification
0/S	Standard Type
C	Good Bias Current Characteristics Type
H/E	High Spec Type (Low DC Resistance; Good Bias Current Characteristics Type)
R	Low DC Resistance Type

Continued on the following page.↗

Continued from the preceding page. ↘

❽❾Thickness (**LQH43P** Only)

Code	Dimensions (T)
26	2.6mm

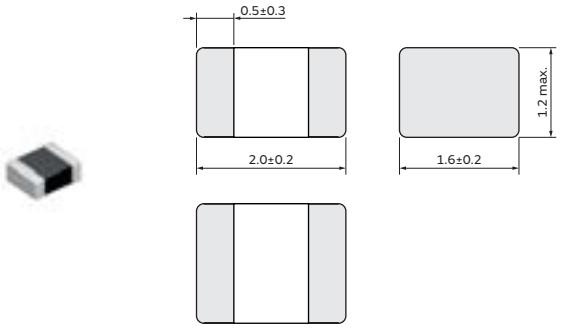
❿Packaging

Code	Packaging
K	Embossed Taping (ø330mm Reel)
L	Embossed Taping (ø180mm Reel)
B	Bulk
D	Paper Taping (ø180mm Reel)

Inductors for Power Lines

DFE201612P_D Series 0806 (2016) inch (mm)

Appearance/Dimensions



(in mm)

Packaging

Code	Packaging	Minimum Quantity
=P2	ø180mm Embossed Taping	3000

Rated Value (□: packaging code)

Part Number		Inductance	Inductance Test Frequency	Rated Current (Isat)*	Rated Current (Itemp)*	Max. of DC Resistance
Infotainment	Powertrain/Safety					
DFE201612PD-R15M□	—	0.15μH ±20%	1MHz	6200mA	5200mA	0.018Ω
DFE201612PD-R24M□	—	0.24μH ±20%	1MHz	5000mA	4000mA	0.022Ω
DFE201612PD-R33M□	—	0.33μH ±20%	1MHz	4500mA	3800mA	0.026Ω
DFE201612PD-R47M□	—	0.47μH ±20%	1MHz	3800mA	3200mA	0.032Ω
DFE201612PD-R68M□	—	0.68μH ±20%	1MHz	3100mA	2500mA	0.046Ω
DFE201612PD-1R0M□	—	1.0μH ±20%	1MHz	2700mA	2200mA	0.060Ω

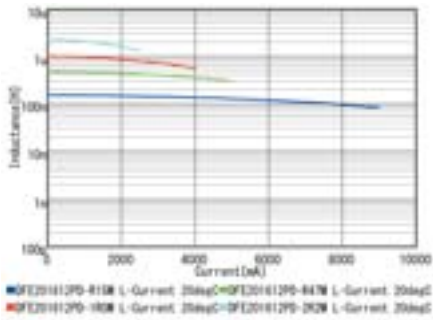
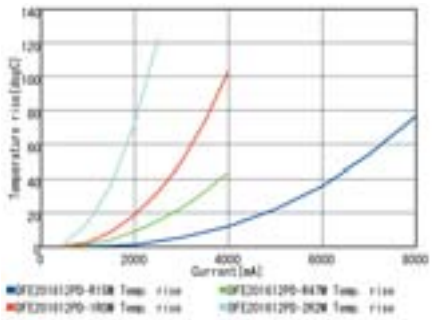
DFE201612PD-2R2M□	—	2.2μH ±20%	1MHz	1700mA	1200mA	0.172Ω

Operating temp.range (Self-temp.rise included): -40 to 125°C
Absolute maximum voltage: 10V DC
Inductance:
Measured with an LCR meter 4284A (Keysight) or equivalent.
RDC:
Measured with a Resistance Hitester 3541 (HIOKI) or equivalent.
Only for reflow soldering
*Isat: Rated Current based on Inductance change
*Itemp: Rated Current based on Temperature rise
Rated current (Isat) is specified when the decrease of the initial inductance value at 30%. (The ambient reference temperature is 20°C.)
Rated current (Itemp) is specified when temperature of inductor the is raised 40°C by DC current. (The ambient reference temperature is 20°C.)
Class of Magnetic Shield: Metal Alloy

Inductance-Current Characteristics (Typ.)



Temperature Rise Characteristics (Typ.)



Inductance-Frequency Characteristics (Typ.)

Operating temp.range (Self-temp.rise not included): -40 to 105°C
Class of Magnetic Shield: Magnetic Resin
Only for reflow soldering
*Isat: Rated Current based on Inductance change
*Itemp: Rated Current based on Temperature rise
*S.R.F: Self Resonant Frequency
When rated current is applied to the products, inductance will be within ±30% of initial inductance value range. Keep the temperature (ambient temperature plus self-generation of heat) under 125°C. When rated current is applied to the products, the self-temperature rise shall be limited to 40°C max. (ambient temperature 85°C). When rated current is applied to the products, the self-temperature rise shall be limited to 20°C max. (ambient temperature 85-105°C).

When rated current is applied to the products, the temperature rise caused by self-generated heat shall be limited to 40°C max. Keep the temperature (ambient temperature plus self-generation of heat) under 125°C.

Operating temp.range (Self-temp.rise included): -40 to 125°C
Operating temp.range (Self-temp.rise not included): -40 to 105°C
Class of Magnetic Shield: Magnetic Resin
Only for reflow soldering
*Isat: Rated Current based on Inductance change
*Itemp: Rated Current based on Temperature rise
*S.R.F: Self Resonant Frequency
When rated current is applied to the products, inductance will be within ±30% of initial inductance value. When rated current is applied to the products, self-temperature rise shall be limited to 40°C max. Keep the temperature (ambient temperature plus self-generation of heat) under 125°C.

—	MDH7045C-471MA□	470μH ±20%	0.1MHz	360mA	350mA	1.20Ω±30%

Operating temp.range (Self-temp.rise included): -55 to 150°C
Inductance:
Measured with an LCR meter 4284A (Keysight) or equivalent.
RDC:
Measured with a Digital Multimeter TR6871 (Advantest) or equivalent.
Only for reflow soldering
*Isat: Rated Current based on Inductance change
*Itemp: Rated Current based on Temperature rise
The saturation allowable DC current value is specified when the decrease of the nominal Inductance value at 30%.(The ambient reference temperature is 20°C)
Rated Current (Based on Temperature rise) is specified when temperature of the inductor on our PCB for test purpose is raised 40°C by DC current.(The ambient reference temperature is 20°C)
Class of Magnetic Shield: Ferrite Core

*S.R.F: Self Resonant Frequency
In operating temperatures exceeding +85°C, derating of current is necessary for the LQM18PZ_CH series. Please apply the derating curve shown in the chart according to the operating temperature. Please consider "Notice (Rating)." When rated current is applied to the products, Inductance will be within ±30% of initial Inductance value range. When rated current is applied to the products, the temperature rise caused by self-generated heat shall be limited to 40°Cmax.

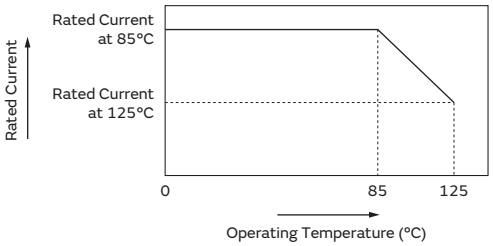
Notice (Rating)

In operating temperatures exceeding +85°C, derating of current is necessary for this series.
Please apply the derating curve shown in the chart according to the operating temperature.

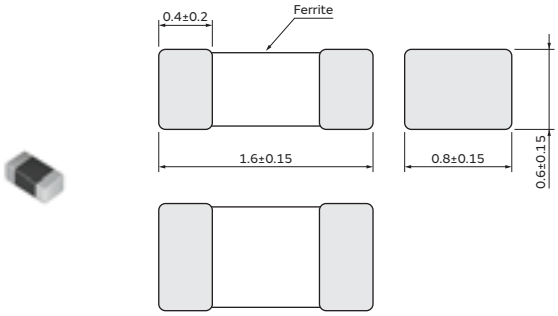
Derating of Rated Current



Inductors for Power Lines

LQM18PZ_DH Series 0603 (1608) inch (mm)

Appearance/Dimensions



(in mm)

Packaging

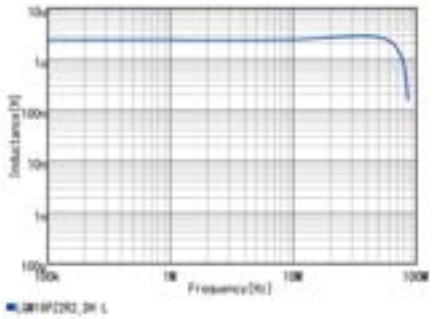
Code	Packaging	Minimum Quantity
D	ø180mm Paper Taping	4000
B	Packing in Bulk	1000

Rated Value (□: packaging code)

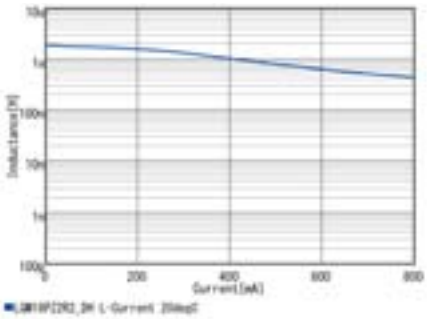
Part Number		Inductance	Inductance Test Frequency	Rated Current (Isat)*	Rated Current (Itemp)*	Max. of DC Resistance	S.R.F* (min.)
Infotainment	Powertrain/Safety						
LQM18PZ2R2MDH□	—	2.2µH ±20%	1MHz	250mA	650mA(Ambient temp.85°C) 450mA(Ambient temp.125°C)	0.47Ω	80MHz

Operating temp.range: -55 to 125°C
Class of Magnetic Shield: Ferrite Core
Only for reflow soldering
*Isat: Rated Current based on Inductance change
*Itemp: Rated Current based on Temperature rise
*S.R.F: Self Resonant Frequency
In operating temperatures exceeding +85°C, derating of current is necessary for the LQM18PZ_DH series. Please apply the derating curve shown in the chart according to the operating temperature. Please consider "Notice (Rating)." When rated current is applied to the products, Inductance will be within ±30% of initial Inductance value range. When rated current is applied to the products, the temperature rise caused by self-generated heat shall be limited to 40°Cmax.

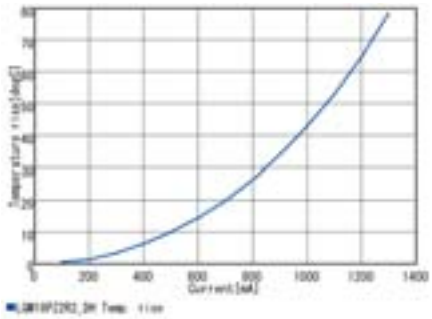
Inductance-Frequency Characteristics (Typ.)



Inductance-Current Characteristics (Typ.)



Temperature Rise Characteristics (Typ.)



Notice (Rating)

In operating temperatures exceeding +85°C, derating of current is necessary for this series.

Derating of Rated Current

Inductors for Power Lines (LQ Series) ⚠Caution/Notice

⚠Caution

Rating

1. About the Rated Current
Do not use products beyond the rated current as this may create excessive heat and deteriorate the insulation resistance.
For the usage of powertrain and safety be sure to provide an appropriate fail-safe function on your product to prevent a second damage that may be caused by the abnormal function or the failure of our product.

2. About Excessive Surge Current
Surge current (pulse current or rush current) greater than the specified rated current applied to the product may cause a critical failure, such as an open circuit, burnout caused by excessive temperature rise.
Please contact us in advance in case of applying the surge current.

Notice

Storage and Operating Condition

<Operating Environment>
Do not use products in chemical atmosphere such as chlorine gas, acid or sulfide gas.
<Storage Requirements>
1. Storage Period
LQM series should be used within 6 months; the other products should be used within 12 months.
Check solderability if this period is exceeded.
2. Storage Conditions
(1) Store products in a warehouse in compliance with the following conditions:
Temperature: -10 to +40°C.
Humidity: 15 to 85% (relative humidity)
Do not subject products to rapid changes in temperature and humidity.
Do not store them in chemical atmosphere such as one containing sulfurous acid gas or alkaline gas.
This will prevent electrode oxidation, which causes poor solderability and possible corrosion of inductors.
(2) Do not store products in bulk packaging to prevent collision among inductors, which causes core chipping and wire breakage.
(3) Store products on pallets to protect from humidity, dust, etc.
(4) Avoid heat shock, vibration, direct sunlight, etc.

Handling

This item is designed to have sufficient strength, but handle with care to avoid chipping or breaking its ceramic structure.
LQH_C/D/P series
- To prevent breaking the wire, avoid touching with sharp material, such as tweezers or the bristles of a cleaning brush, to the wire wound portion of this product.
- To prevent breaking the core, avoid applying excessive mechanical shock to products mounted on the board.
- Temperature may rise up to max. 40°C when applying the rated current to Inductors for Power Lines. Be careful of the temperature rating of the circuit board and components around the chip Inductors.

LQM series
- There is the possibility that magnetism may change the inductance value. Do not use a magnet or tweezers with magnetism when handling chip inductors. (The tip of the tweezers should be molded with resin or pottery.)
- When the excessive current over rated current is applied, it may cause the inductance value to change due to magnetism.

<Transportation>
Do not apply excessive vibration or mechanical shock to products.
<Resin Coating>
When coating products with resin, the relatively high resin curing stress may change inductance values.
For exterior coating, select resin carefully so that electrical and mechanical performance of the product is not affected. Prior to use, please evaluate reliability with the product mounted in your application set.

Continued on the following page.↗

Inductors for Power Lines (LQ Series) ⚠Caution/Notice

Continued from the preceding page.↘

(LQH series)
An open circuit issue may occur by mechanical stress caused by the resin, amount/cured shape of resin, or operating conditions, etc. Some resins containing impurities or chloride may possibly generate chlorine by hydrolysis under some operating conditions, causing corrosion of the inductor wire and leading to an open circuit.

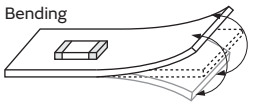
<Rated Current>

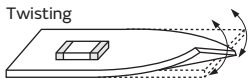
(LQH2HP_JR Series·LQH44P_GR Series)
Inductance will be more than the value, which is 30% down from minimum rated Inductance value.
(Other LQH_P Series)
Inductance will be within ±30% of nominal Inductance value.

▪ Based on Temperature Rise
For LQH_P series, rated current is set to keep temperature rise caused by self heating 40°C or less.
For other Inductors for Power Lines, please refer to individual specifications.

<Handling of a Substrate>

After mounting products on a substrate, do not apply any stress to the product caused by bending or twisting the substrate when cropping the substrate, inserting and removing a connector from the substrate, or tightening a screw to the substrate.
Excessive mechanical stress may cause cracking in the Product.





Inductors for Power Lines (except for LQ Series) ⚠Caution/Notice

⚠Caution

Rating

1. About the Rated Current
Do not use products beyond the rated current as this may create excessive heat and deteriorate the insulation resistance.
Be sure to provide an appropriate fail-safe function on your product to prevent a second damage that may be caused by the abnormal function or the failure of our product.

2. About Excessive Surge Current
Surge current (pulse current or rush current) greater than the specified rated current applied to the product may cause a critical failure, such as an open circuit, burnout caused by excessive temperature rise. Please contact us in advance in case of applying the surge current.

Notice

Precaution for Application

(1) The part must be pre-heated before soldering if reflow is applied.
The difference between pre-heat temperature and soldering temperature must be within 150°C.
(2) If a soldering iron is applied, the soldering process must be completed within 3 seconds at a soldering temperature lower than 350°C.
The tip of the soldering iron must not touch the terminal electrode in this process.
(3) Terminals should not be handled with fingers. This is to prevent deterioration in solderability.
(4) Soldering using a soldering iron must be done only once for each part.
(5) PPCB mount: this part must be handled with care to minimize any physical stress to the part at the board assembly process.
(6) To minimize the influence to the part, the thickness of PCB, land dimension, and the amount of solder must be evaluated carefully by individual application.
(7) If a washing process is applied, please make sure there is no problem with operating.
(8) Products should not be dropped on the floor. This is to prevent damage to the products.
(9) Although electrical performance is satisfactory, audible noises may be made if audio frequency ingredient is contained in current.
Before using, please make sure there aren't any problem with operating.

Handling

○Storage and Handling Requirements
(1) Storage period
Use the products within 6 months after delivered.
Solderability should be checked if this period is exceeded.
(2) Storage conditions
▪ Products should be stored in the warehouse on the following conditions.
Temperature: -10 to 40°C
Humidity: 15 to 85% relative humidity No rapid change on temperature and humidity
Don't keep products in corrosive gases such as sulfur, chlorine gas or acid, or it may cause oxidization of electrode, resulting in poor solderability.
▪ Products should not be stored on bulk packaging condition to prevent the chipping of the core and the breaking of winding wire caused by the collision between the products.
▪ Products should be stored on the palette for the prevention of the influence from humidity, dust and so on.
▪ Products should be stored in the warehouse without heat shock, vibration, direct sunlight and so on.
(3) Handling Condition
Care should be taken when transporting or handling product to avoid excessive vibration or mechanical shock.
○Resin coating
The inductance value may change and/or it may affect on the product's performance due to high cure-stress of resin to be used for coating / molding products. So please pay your careful attention when you select resin. In prior to use, please make the reliability evaluation with the product mounted in your application set.

Inductors for Power Lines (except for LQ Series) ⚠Caution/Notice

Continued from the preceding page.↘

○Metal alloy inductor product*

Metal alloy inductor product* employs a core with low insulation resistance, pay strict attention when use it

a) Do not make any through holes and copper pattern under the coil. except a copper pattern to the electrode.

b) Design/mount any components not to contact this product.

Metal alloy inductor product*...
DFE201612P_D, DFE252012P_D, DFEG7030D, DFEH7030D, DFEG10040D, DFEH10040D, DFEG12060D, DFEH12060D

○Temperature Rise

Temperature rise of power choke coil depends on the installation condition in end products.
It shall be confirmed in the actual end product that temperature rise of power choke coil is in the limit specified temperature class

Inductors for Power Lines Soldering and Mounting

1. Standard Land Pattern Dimensions

A high Q value is achieved when the PCB electrode land pattern is designed so that it does not project beyond the chip Inductors (chip coils) electrode.

2. Standard Soldering Conditions

(1) Soldering method

Chip Inductors (Chip coils) can be flow or reflow soldered.

Please contact Murata regarding other soldering methods.

As for LQM18P/ LQH2HP/2MP/32D/3NP/32P/43P/44P/5BP series, please use reflow soldering.

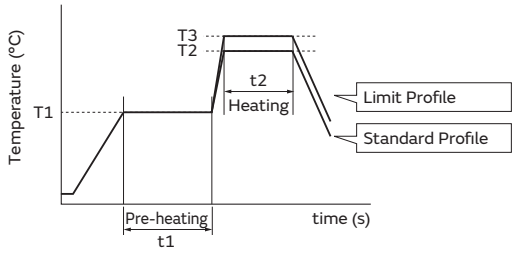
Solder: Use Sn-3.0Ag-0.5Cu solder.

Flux: Use rosin-based flux, but not strongly acidic flux (with chlorine content exceeding 0.2wt%).
Do not use water-soluble flux.

For additional mounting methods, please contact Murata.

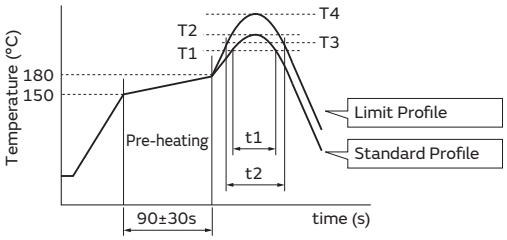
(2) Soldering profile

●Flow Soldering profile
(Sn-3.0Ag-0.5Cu solder)



Series	Pre-heating		Standard Profile			Limit Profile		
			Heating		Cycle of flow	Heating		Cycle of flow
	Temp. (T1)	Time. (t1)	Temp. (T2)	Time. (t2)		Temp. (T3)	Time. (t2)	
LQM21P/2MP/2HP	150°C	60s min.	250°C	4 to 6s	2 times max.	265±3°C	5s max.	2 times max.
LQH32C	150°C	60s min.	250°C	4 to 6s	2 times max.	265±3°C	5s max.	1 time

●Reflow Soldering profile (LQ Series)
(Sn-3.0Ag-0.5Cu solder)



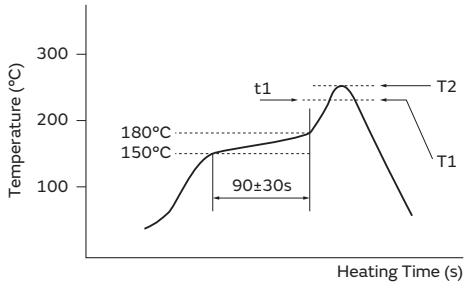
Series	Standard Profile				Limit Profile			
	Heating		Peak temperature (T2)	Cycle of reflow	Heating		Peak temperature (T4)	Cycle of reflow
	Temp. (T1)	Time. (t1)			Temp. (T3)	Time. (t2)		
LQM18P/21P/2MP/2HP LQH2HP/2MP LQH32D LQH3NP/32P/43P/44P/5BP	220°C	30 to 60s	245±3°C	2 times max.	230°C	60s max.	260°C/10s	2 times max.
LQH32C	220°C	30 to 60s	245±3°C	2 times max.	230°C	60s max.	260°C/10s	1 time

Continued on the following page.↗

Inductors for Power Lines Soldering and Mounting

Continued from the preceding page. ↘

●Reflow Soldering profile (except for LQ Series)
(Sn-3.0Ag-0.5Cu solder)



*Reflow Times: 2 times max.
*We recommend an infrared ray as the heat source of the reflow bath.
However halogen lamp should not be used; the side heat would be beyond the range of resistance heat, so we do not recommend it.

Series	Heating		Peak Temperature (T2)	Cycle of Flow
	Temp. (T1)	Time (t1)		
DFE252012P_D **MBH6045C** **MDH6045C** **MBH7045C** **MDH7045C** **MDH10060C** **MBH10145C** **MBH12282C** **MDH12577C** **MBH12575C**	230°C	20 to 40s	250+5/-0°C	2 times max.
DFEG7030D **DFEH7030D** **DFEG10040D** **DFEH10040D** **DFEG12060D** **DFEH12060D**	230°C	20 to 40s	255+5/-0°C	2 times max.

(3) Reworking with Soldering Iron

Preheating at 150°C for 1 minute is required. Do not directly touch the products with the tip of the soldering iron in order to prevent the crack on the products due to the thermal shock.

Soldering iron power output: 80W max.
Temperature of soldering iron tip
: 350°C (except for LQH5BP)
: 380°C (LQH5BP only)

Diameter of soldering iron end: 3.0mm max.
Soldering time: within 3 s

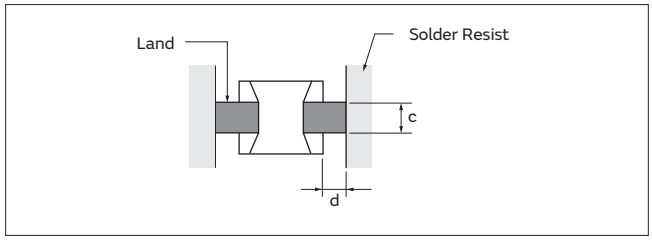
Please keep the fix time with the soldering iron within 2 times.
(except for LQH2HP_GR, LQH2MP)

Please keep the fix time with the soldering iron within only once. (LQH2HP_GR, LQH2MP only)

3. Mounting Instructions

(1) Land Pattern Dimensions

Large lands reduce Q of the mounted chip. Also, large protruding land areas (bordered by lines having dimensions 'c' and 'd' shown) cause floating and electrode leaching.



(2) Land Pattern Designing (LQH series)

Please follow the recommended patterns.
Otherwise, their performance, which includes electrical performance or solderability, may be affected, or result in “position shift” in the soldering process.

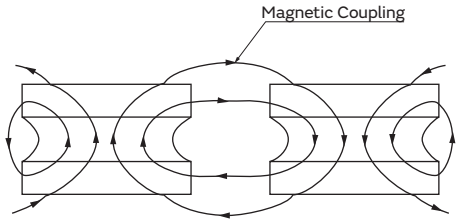
Continued on the following page. ↗

Inductors for Power Lines Soldering and Mounting

Continued from the preceding page. ↘

(3) Magnetic Coupling

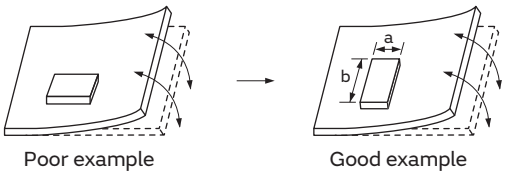
Since some chip inductors (chip coils) are constructed like an open magnetic circuit, narrow spacing between inductors (coils) may cause magnetic coupling.
LQM and LQH_P series have a magnetically shielded structure. The structure makes their coupling coefficient smaller than that of conventional chip inductors (chip coils).



(4) PCB Warping

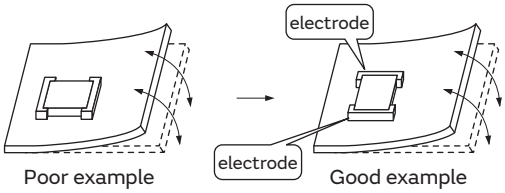
PCB should be designed so that products are not subjected to the mechanical stress caused by warping the board.

Products should be located in a sideways direction (Length: a<b) to the mechanical stress.



except LQH2HP_DR/JR, 3NP/44P/5BP

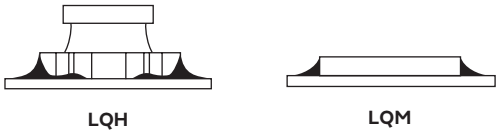
The electrode part of the product should be located as in the figure to avoid mechanical stress.



LQH2HP_DR/JR, 3NP/44P/5BP

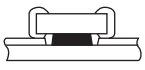
(5) Amount of Solder Paste

Excessive solder causes electrode corrosion, while insufficient solder causes low electrode bonding strength. Adjust the amount of solder paste as shown on the right so that solder is applied.
Guideline of solder paste thickness
· LQM, LQH2HP/2MP/3NP/32P/43P/44P/5BP: 100 to 150μm
· LQH31H/32C/32D, LQH43N: 200 to 300μm



(6) Amount of Adhesive

If too much adhesive is applied, then it may overflow into the land or termination areas and yield poor solderability. In contrast, if insufficient adhesive is applied, or if the adhesive is not sufficiently hardened, then the chip may become detached during flow soldering. Apply the adhesive in accordance with the conditions shown in the chart.



Part Number	Typical Application Amount (in: mg)
	IR-100
LQM2HP	0.25-0.30
LQM2MP	0.20-0.25

Continued on the following page. ↗

Inductors for Power Lines Soldering and Mounting

Continued from the preceding page.↘

4. Cleaning

The following conditions should be observed when cleaning chip inductors (chip coils):

(1) Cleaning Temperature: 60°C max. (40°C max. for alcohol cleaning agents)

(2) Ultrasonic
Output: 20W/l max.
Duration: 5 minutes max.
Frequency: 28 to 40kHz
Care should be taken not to cause resonance of the PCB and mounted products.

(3) Cleaning agent
The following cleaning agents have been tested on individual components. Evaluation in complete assembly should be done prior to production.
(a) Alcohol cleaning agents
Isopropyl alcohol (IPA)
(b) Aqueous cleaning agents
Pine Alpha ST-100S

(4) Ensure that flux residue is completely removed.
Component should be thoroughly dried after aqueous agents have been removed with deionized water.

For additional cleaning methods, please contact Murata.

❻Inductance

Expressed by three-digit alphanumerics. The unit is micro-henry (μH). The first and second figures are significant digits, and the third figure expresses the number of zeros that follow the two figures. If there is a decimal point, it is expressed by the capital letter "**R**". In this case, all figures are significant digits. If inductance is less than 0.1μH, the inductance code is expressed by a combination of two figures and the capital letter "**N**", and the unit of inductance is nano-henry (nH). The capital letter "**N**" indicates the unit of "nH", and also expresses a decimal point. In this case, all figures are significant digits. For those products whose inductance values are specified using three designated digits, these values may be indicated using the closest two digits instead.

❼Inductance Tolerance

Code	Inductance Tolerance
J	±5%
K	±10%
M	±20%

Inductors for General Circuits

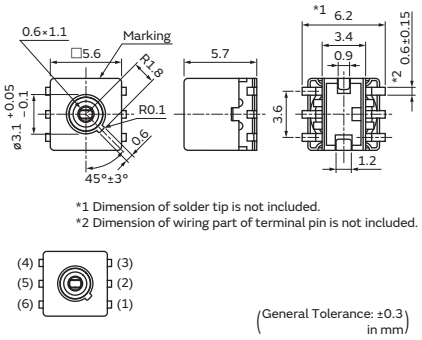
Surface mount variable coil 5CCEG Series 2222 (5656) inch (mm)

Appearance/Dimensions



*1 Dimension of solder tip is not included.
*2 Dimension of wiring part of terminal pin is not included.

(General Tolerance: ±0.3 in mm)

Packaging

Code	Packaging	Minimum Quantity
=P3	ø330mm Embossed Taping	750

Features

- 6.5×5.9×6.0(H) mm MAX.
- Supported inductance range: 0.05 to 2.7μH
- High reliability that conforms to automotive standards
- Operating temperature range: -40°C to +85°C

Applications

- Ideal for use as RF matching transformers for car tuners

Inductors for General Circuits (LQ Series) ⚠Caution/Notice

⚠Caution

Rating

1. About the Rated Current
Do not use products beyond the rated current as this may create excessive heat and deteriorate the insulation resistance.
For the usage of powertrain and safety be sure to provide an appropriate fail-safe function on your product to prevent a second damage that may be caused by the abnormal function or the failure of our product.

2. About Excessive Surge Current
Surge current (pulse current or rush current) greater than the specified rated current applied to the product may cause a critical failure, such as an open circuit, burnout caused by excessive temperature rise.
Please contact us in advance in case of applying the surge current.

Notice

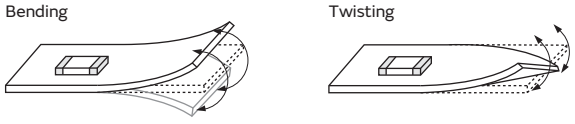
Storage and Operating Condition

<Operating Environment>
Do not use products in chemical atmosphere such as chlorine gas, acid or sulfide gas.
<Storage Requirements>
1. Storage Period
Products should be used within 12 months.
Check solderability if this period is exceeded.
2. Storage Conditions
(1) Store products in a warehouse in compliance with the following conditions:
Temperature: -10 to +40 degrees C.
Humidity: 15 to 85% (relative humidity)
Do not subject products to rapid changes in temperature and humidity.
Do not store them in chemical atmosphere such as one containing sulfurous acid gas or alkaline gas.
This will prevent electrode oxidation, which causes poor solderability and possible corrosion of inductors.
(2) Do not store products in bulk packaging to prevent collision among inductors, which causes core chipping and wire breakage.
(3) Store products on pallets to protect from humidity, dust, etc.
(4) Avoid heat shock, vibration, direct sunlight, etc.

Handling

This item is designed to have sufficient strength, but handle with care to avoid chipping or breaking its ceramic structure.
LQH series
- To prevent breaking the wire, avoid touching with sharp material, such as tweezers or the bristles of a cleaning brush, to the wire wound portion of this product.
- To prevent breaking the core, avoid applying excessive mechanical shock to products mounted on the board.

<Transportation>
Do not apply excessive vibration or mechanical shock to products.
<Resin Coating>
When coating products with resin, the relatively high resin curing stress may change inductance values.
For exterior coating, select resin carefully so that electrical and mechanical performance of the product is not affected. Prior to use, please evaluate reliability with the product mounted in your application set.
(LQH series)
An open circuit issue may occur by mechanical stress caused by the resin, amount/cured shape of resin, or operating conditions, etc. Some resins containing impurities or chloride may possibly generate chlorine by hydrolysis under some operating conditions, causing corrosion of the inductor wire and leading to an open circuit.
<Handling of a Substrate>
After mounting products on a substrate, do not apply any stress to the product caused by bending or twisting the substrate when cropping the substrate, inserting and removing a connector from the substrate, or tightening a screw to the substrate.
Excessive mechanical stress may cause cracking in the Product.



Inductors for General (except for LQ Series) ⚠Caution/Notice

Rating

1. About the Rated Current
Do not use products beyond the rated current as this may create excessive heat and deteriorate the insulation resistance.
Be sure to provide an appropriate fail-safe function on your product to prevent a second damage that may be caused by the abnormal function or the failure of our product.

2. About Excessive Surge Current
Surge current (pulse current or rush current) greater than the specified rated current applied to the product may cause a critical failure, such as an open circuit, burnout caused by excessive temperature rise. Please contact us in advance in case of applying the surge current.

Notice

Precaution for Application

(1) The part must be pre-heated before soldering if reflow is applied.
The difference between pre-heat temperature and soldering temperature must be within 150°C.
(2) If a soldering iron is applied, the soldering process must be completed within 3 seconds at a soldering temperature lower than 350°C.
The tip of the soldering iron must not touch the terminal electrode in this process.
(3) Terminals should not be handled with fingers. This is to prevent deterioration in solderability.
(4) Soldering using a soldering iron must be done only once for each part.
(5) PCB mount: this part must be handled with care to minimize any physical stress to the part at the board assembly process.
(6) To minimize the influence to the part, the thickness of PCB, land dimension, and the amount of solder must be evaluated carefully by individual application.
(7) If a washing process is applied, please make sure there is no problem with operating.
(8) Products should not be dropped on the floor. This is to prevent damage to the products.
(9) Although electrical performance is satisfactory, audible noises may be made if audio frequency ingredient is contained in current.
Before using, please make sure there aren't any problem with operating.

Handling

○Storage and Handling Requirements
(1) Storage period
Use the products within 6 months after delivered.
Solderability should be checked if this period is exceeded
(2) Storage conditions
▪ Products should be stored in the warehouse on the following conditions.
Temperature: -10 to 40°C
Humidity: 15 to 85% relative humidity No rapid change on temperature and humidity
Don't keep products in corrosive gases such as sulfur, chlorine gas or acid, or it may cause oxidization of electrode, resulting in poor solderability.
▪ Products should not be stored on bulk packaging condition to prevent the chipping of the core and the breaking of winding wire caused by the collision between the products.
▪ Products should be stored on the palette for the prevention of the influence from humidity, dust and so on.
▪ Products should be stored in the warehouse without heat shock, vibration, direct sunlight and so on.
(3) Handling Condition
Care should be taken when transporting or handling product to avoid excessive vibration or mechanical shock.

Inductors for General Circuits Soldering and Mounting

1. Standard Land Pattern Dimensions

A high Q value is achieved when the PCB electrode land pattern is designed so that it does not project beyond the chip Inductors (chip coils) electrode.

Land Pattern + Solder Resist Land Pattern Solder Resist

(in mm)

Series	Standard Land Dimensions
LQH32N	LQH43N	HEAWS	HEAW	5CCEG	FSDVA	
Attention should be paid to potential magnetic coupling effects when using the Inductors (coils) as a resonator.

Continued on the following page.↗

Inductors for General Circuits Soldering and Mounting

Continued from the preceding page.↘

2. Standard Soldering Conditions

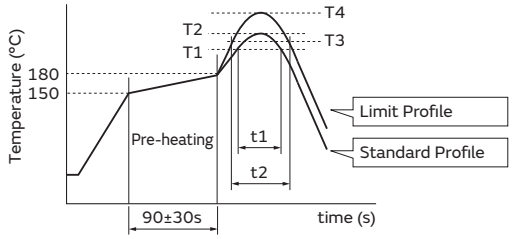
(1) Soldering method

Chip Inductors (Chip coils) can be reflow soldered.
Please contact Murata regarding other soldering methods.
Solder: Use Sn-3.0Ag-0.5Cu solder.
Flux: Use rosin-based flux, but not strongly acidic flux (with chlorine content exceeding 0.2wt%).
Do not use water-soluble flux.

For additional mounting methods, please contact Murata.

(2) Soldering profile

●Reflow Soldering profile (LQ Series)
(Sn-3.0Ag-0.5Cu solder)



Series	Standard Profile				Limit Profile			
	Heating		Peak temperature (T2)	Cycle of reflow	Heating		Peak temperature (T4)	Cycle of reflow
	Temp. (T1)	Time. (t1)			Temp. (T3)	Time. (t2)		
LQH32N/43N	220°C	30 to 60s	245±3°C	2 times max.	230°C	60s max.	260°C/10s	2 times max.

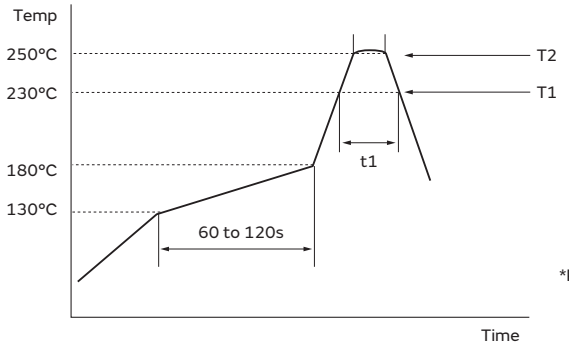
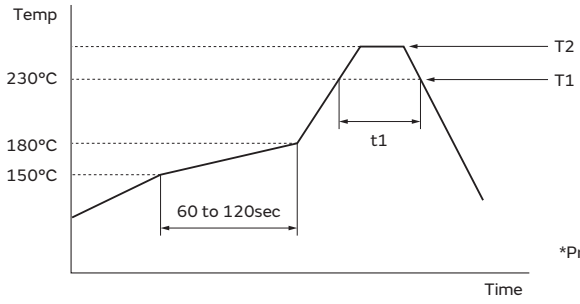
●Reflow Soldering profile (except for LQ Series)
(Sn-3.0Ag-0.5Cu solder)

HEAWS
HEAW



*Preheat: Temperature 130 to 180°C, Time60 to 120 sec

FSDVA
5CCEG



*Preheat: Temperature 150 to 180°C, Time60 to 120 sec

Series	Heating		Peak Temperature (T2)	Cycle of Reflow
	Temp. (T1)	Time (t1)		
HEAWS HEAW	230°C	60s	250 (+10/−0)°C/10s	2 times max.
FSDVA 5CCEG	230°C	40 to 60s	260°C/3s or 250°C/10s	2 times max.

(3) Reworking with Soldering Iron (LQ Series)

Preheating at 150°C for 1 minute is required. Do not directly touch the products with the tip of the soldering iron in order to prevent the crack on the products due to the thermal shock.

Soldering iron power output: 80W max.
Temperature of soldering iron tip: 350°C
Diameter of soldering iron end: 3.0mm max.
Soldering time: within 3 s
Please keep the fix time with the soldering iron within 2 times

Reworking with Soldering Iron (HEAWS/HEAW Series)

Temperature of soldering iron tip: 390°C
Soldering time: within 3±1 s

Reworking with Soldering Iron (FSDVA/5CCEG Series)

Apply reflow soldering conditions when using soldering iron and for rework.
Especially be careful not to overheat the tip of the soldering iron.

Temperature of soldering iron tip: 360°C
Soldering time: within 3±1 s
Please keep the fix time with the soldering iron within 1 times.

Continued on the following page.↗

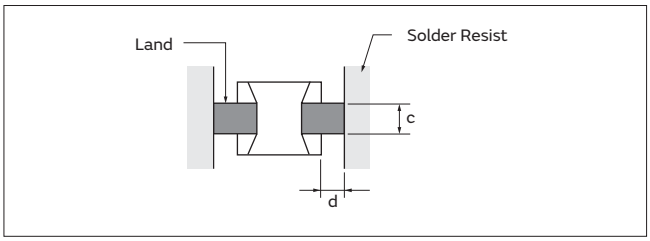
Inductors for General Circuits Soldering and Mounting

Continued from the preceding page. ↘

3. Mounting Instructions

(1) Land Pattern Dimensions

Large lands reduce Q of the mounted chip. Also, large protruding land areas (bordered by lines having dimensions 'c' and 'd' shown) cause floating and electrode leaching.

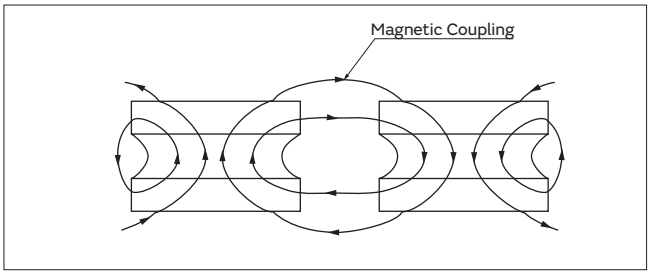


(2) Land Pattern Designing (LQH series)

Please follow the recommended patterns.
Otherwise, their performance, which includes electrical performance or solderability, may be affected, or result in “position shift” in the soldering process.

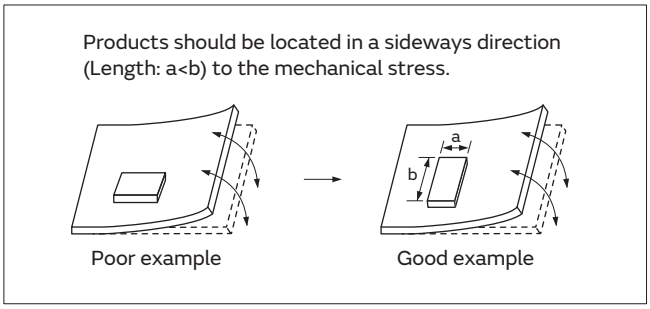
(3) Magnetic Coupling

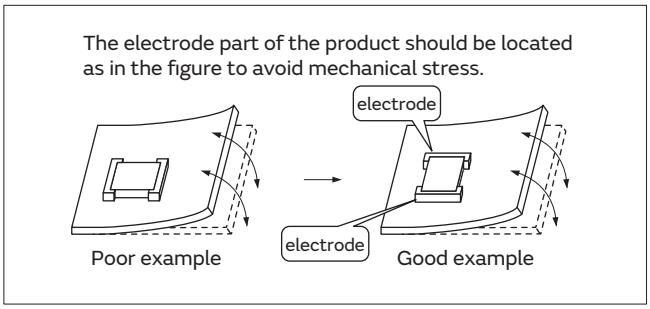
Since some chip inductors (chip coils) are constructed like an open magnetic circuit, narrow spacing between inductors (coils) may cause magnetic coupling.



(4) PCB Warping

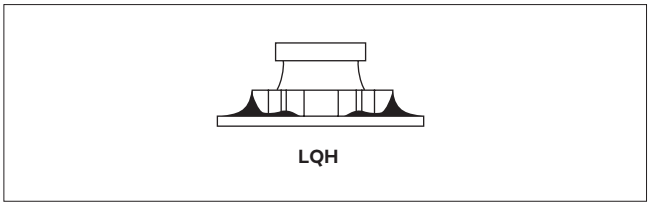
PCB should be designed so that products are not subjected to the mechanical stress caused by warping the board.





(5) Amount of Solder Paste

Excessive solder causes electrode corrosion, while insufficient solder causes low electrode bonding strength. Adjust the amount of solder paste as shown on the right so that solder is applied.
Guideline of solder paste thickness
LQH32N: 100 to 150µm
LQH43N: 200 to 300µm
5CCEG: 200µm
FSDVA: 150 to 200µm



Continued on the following page. ↗

Inductors for General Circuits Soldering and Mounting

Continued from the preceding page.↘

4. Cleaning

The following conditions should be observed when cleaning chip inductors (chip coils):

(1) Cleaning Temperature: 60°C max. (40°C max. for alcohol cleaning agents)

(2) Ultrasonic
Output: 20W/l max.
Duration: 5 minutes max.
Frequency: 28 to 40kHz
Care should be taken not to cause resonance of the PCB and mounted products.

(3) Cleaning agent
The following cleaning agents have been tested on individual components. Evaluation in complete assembly should be done prior to production.
(a) Alcohol cleaning agents
Isopropyl alcohol (IPA)
(b) Aqueous cleaning agents
Pine Alpha ST-100S

(4) Ensure that flux residue is completely removed.
Component should be thoroughly dried after aqueous agents have been removed with deionized water.

For additional cleaning methods, please contact Murata.

❻Inductance

Expressed by three-digit alphanumerics. The unit is micro-henry (μH). The first and second figures are significant digits, and the third figure expresses the number of zeros that follow the two figures. If there is a decimal point, it is expressed by the capital letter "**R**." In this case, all figures are significant digits. If inductance is less than 0.1μH, the inductance code is expressed by a combination of two figures and the capital letter "**N**," and the unit of inductance is nano-henry (nH). The capital letter "**N**" indicates the unit of "nH," and also expresses a decimal point. In this case, all figures are significant digits. For those products whose inductance values are specified using three designated digits, these values may be indicated using the closest two digits instead.

❼Inductance Tolerance

Operating temp.range (Self-temp.rise not included): -55 to 125°C
Only for reflow soldering
*S.R.F: Self Resonant Frequency
In operating temperatures exceeding +85°C, derating of current is necessary for the LQW15A_80 series. Please apply the derating curve shown in the chart according to the operating temperature. Please consider "Notice (Rating)."

Operating temp.range (Self-temp.rise not included): -55 to 125°C
Only for reflow soldering
*S.R.F: Self Resonant Frequency
In operating temperatures exceeding +85°C, derating of current is necessary for this series. Please apply the derating curve shown in the chart according to the operating temperature. Please consider "Notice (Rating)." When rated current is applied to the products, the temperature rise caused by self-generated heat shall be limited to 40°C max.

Rating

1. About the Rated Current
Do not use products beyond the rated current as this may create excessive heat and deteriorate the insulation resistance.
For the usage of powertrain and safety be sure to provide an appropriate fail-safe function on your product to prevent a second damage that may be caused by the abnormal function or the failure of our product.

2. About Excessive Surge Current
Surge current (pulse current or rush current) greater than the specified rated current applied to the product may cause a critical failure, such as an open circuit, burnout caused by excessive temperature rise.
Please contact us in advance in case of applying the surge current.

Notice

Storage and Operating Condition

<Operating Environment>
Do not use products in chemical atmosphere such as chlorine gas, acid or sulfide gas.
<Storage Requirements>
1. Storage Period
LQG series should be used within 6 months; the other products should be used within 12 months.
Check solderability if this period is exceeded.
2. Storage Conditions
(1) Store products in a warehouse in compliance with the following conditions:
Temperature: -10 to +40 degrees C.
Humidity: 15 to 85% (relative humidity)
Do not subject products to rapid changes in temperature and humidity.
Do not store them in chemical atmosphere such as one containing sulfurous acid gas or alkaline gas.
This will prevent electrode oxidation, which causes poor solderability and possible corrosion of inductors.
(2) Do not store products in bulk packaging to prevent collision among inductors, which causes core chipping and wire breakage.
(3) Store products on pallets to protect from humidity, dust, etc.
(4) Avoid heat shock, vibration, direct sunlight, etc.
(5) Products should be storaged under the airtight packaged condition. (LQG Series)

Handling

This item is designed to have sufficient strength, but handle with care to avoid chipping or breaking its ceramic structure.
LQW_A/C series
- To prevent breaking the wire, avoid touching with sharp material, such as tweezers or the bristles of a cleaning brush, to the wire wound portion.
- To prevent breaking the core, avoid applying excessive mechanical shock to products mounted on the board.
- In some mounting machines, when picking up components, a support pin pushes the components up from the bottom of the base tape. In this case, please remove the support pin. The support pin may damage the components and break the wire.
- In rare cases, the laser recognition cannot recognize this component. Please contact us when you use laser recognizion. (There is no problem with the permeation and reflection type.) (LQW15A Series only)

<Transportation>
Do not apply excessive vibration or mechanical shock to products.
<Resin Coating>
When coating products with resin, the relatively high resin curing stress may change inductance values.
For exterior coating, select resin carefully so that electrical and mechanical performance of the product is not affected. Prior to use, please evaluate reliability with the product mounted in your application set.

Continued on the following page.↗

RF Inductors ⚠Caution/Notice

Continued from the preceding page.↘

(LQW series)

An open circuit issue may occur by mechanical stress caused by the resin, amount/cured shape of resin, or operating conditions, etc. Some resins containing impurities or chloride may possibly generate chlorine by hydrolysis under some operating conditions, causing corrosion of the inductor wire and leading to an open circuit.

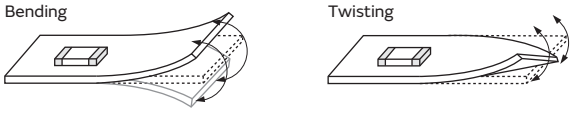
(LQP series)

When products are coated with resin, please contact us in advance.

<Handling of a Substrate>

After mounting products on a substrate, do not apply any stress to the product caused by bending or twisting the substrate when cropping the substrate, inserting and removing a connector from the substrate, or tightening a screw to the substrate.

Excessive mechanical stress may cause cracking in the Product.



Substrate restriction (LQP Series)

- Don't mount on FPC (Flexible printed circuits)
- When components are mounted on substrate of under 6-layers, please contact us in advance.
  To mount components on FPC or substrate of under 6-layers may cause of cracking issue by stress.

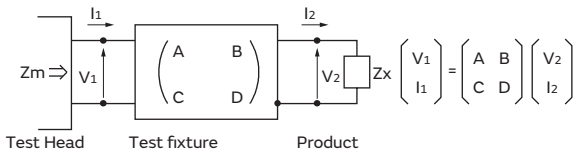
(1) There is a possibility of chip cracking caused by PCB expansion/contraction with heat, because stress on a chip is different depending on PCB material and structure.
When the thermal expansion coefficient greatly differs between the board used for mounting and the chip, it will cause cracking of the chip due to the thermal expansion and contraction.
The chip is assumed to be mounted on the PCB of glass-epoxy material, and we don't test with other PCB material which has different thermal expansion coefficient from Glass-epoxy.
When other PCB materials are considered, please be sure to evaluate by yourself.

(2) After mounting products on a substrate, do not apply any stress to the product caused by bending or twisting to the substrate when cropping the substrate, inserting and removing a connector from the substrate or tightening screw to the substrate.
Excessive mechanical stress may cause cracking in the product.
In case of the mounting on flexible PCB, there is a possibility of chip cracking caused by mechanical stress even from small bending or twisting.
When the flexible PCB is considered, please be sure to evaluate by yourself.

Measuring Method

Measuring Method of Inductance/Q

1. Residual elements and stray elements of test fixtures can be described by F-parameter as shown in the following:



2. The impedance of chip Inductors (chip coils) Zx and measured value Zm can be described by input/output current/voltage.

$$Zm = \frac{V_1}{I_1}, \quad Zx = \frac{V_2}{I_2}$$

3. Thus, the relation between Zx and Zm is shown in the following:

$$Zx = \alpha \frac{Zm - \beta}{1 - Zm\Gamma}$$

where, $\alpha = D / A = 1$
$\beta = B / D = Zsm - (1 - Yom\ Zsm)\ Zss$
$\Gamma = C / A = Yom$

Zsm: measured impedance of short chip
Zss: residual impedance of short chip*
Yom: measured admittance when opening the fixture

*Residual inductance of short chip

Residual Inductance	Series
0nH	**LQG15H, LQG18HH**
0.480nH	**LQP03TN**
0.556nH	**LQG15W, LQW15A/C**
0.771nH	**LQH31H, LQW18AN/C**

4. Lx and Qx should be calculated with the following equation.

$$Lx = \frac{Im(Zx)}{2\pi f}, \quad Qx = \frac{Im(Zx)}{Re(Zx)}$$

Lx: Inductance of chip Inductors (chip coils)
Qx: Q of chip Inductors (chip coils)
f: Measuring frequency

RF Inductors Soldering and Mounting

1. Standard Land Pattern Dimensions

A high Q value is achieved when the PCB electrode land pattern is designed so that it does not project beyond the chip Inductors (chip coils) electrode.

Land Pattern + Solder Resist
Land Pattern
Solder Resist
(in mm)

Series	Standard Land Dimensions
LQG15H **LQG18H** **LQG15W** **LQH31H** **LQP03** **LQW15A/C** **LQW18A**	
Part Number	a	b	c
LQG15H	0.4	1.4-1.5	0.5-0.6
LQG18H	0.6-0.8	1.8-2.2	0.6-0.8
LQH31H	1.0	4.5	1.5
LQP03	0.2-0.3	0.8-0.9	0.2-0.3
LQG15W, LQW15A (Except for **_8Z**)	0.5	1.2	0.65
LQW15A_8Z	0.6	1.42	0.66
LQW15C_0Z	0.4	1.4	0.6
LQW15C_1Z	0.4	1.4	0.66
LQW18A (Except for **_8Z**)	0.6-0.8	1.9-2.0	0.7-1.0
LQW18A_8Z	0.86	2.0	1.15
LQW18C	0.7	2.2	1.0

Attention should be paid to potential magnetic coupling effects when using the Inductors (coils) as a resonator.

2. Standard Soldering Conditions

(1) Soldering method

Chip Inductors (Chip coils) can be flow or reflow soldered. Please contact Murata regarding other soldering methods.

As for LQG, LQP, LQW series, please use reflow soldering.

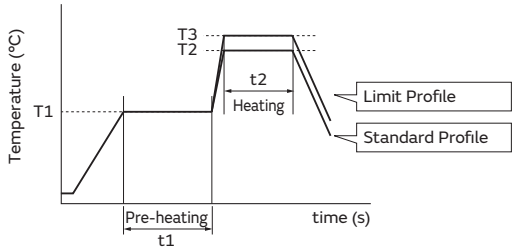
Solder: Use Sn-3.0Ag-0.5Cu solder.

Flux: Use rosin-based flux, but not strongly acidic flux (with chlorine content exceeding 0.2wt%).
Do not use water-soluble flux.
The flux used for LQW series should use the rosin-based flux that includes middle activator equivalent to 0.06wt% to 0.1wt% chlorine.

For additional mounting methods, please contact Murata.

(2) Soldering profile

●Reflow Soldering profile
(Sn-3.0Ag-0.5Cu solder)



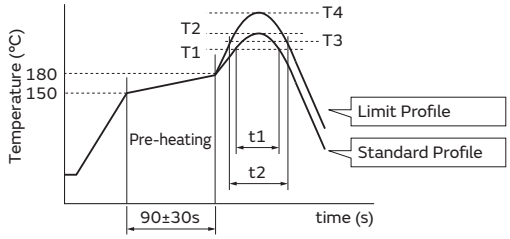
Series	Pre-heating		Standard Profile			Limit Profile		
			Heating		Cycle of flow	Heating		Cycle of flow
	Temp. (T1)	Time. (t1)	Temp. (T2)	Time. (t2)		Temp. (T3)	Time. (t2)	
LQH31H	150°C	60s min.	250°C	4 to 6s	2 times max.	265±3°C	5s max.	2 times max.

Continued on the following page. ↗

RF Inductors Soldering and Mounting

Continued from the preceding page.↘

●Reflow Soldering profile
(Sn-3.0Ag-0.5Cu solder)



Series	Standard Profile				Limit Profile			
	Heating		Peak temperature (T2)	Cycle of reflow	Heating		Peak temperature (T4)	Cycle of reflow
	Temp. (T1)	Time. (t1)			Temp. (T3)	Time. (t2)		
LQG15H/W, 18H LQH31H LQP03 LQW15A/C, 18A/C	220°C	30 to 60s	245±3°C	2 times max.	230°C	60s max.	260°C/10s	2 times max.

(3) Reworking with Soldering Iron

Preheating at 150°C for 1 minute is required. Do not directly touch the products with the tip of the soldering iron in order to prevent the crack on the products due to the thermal shock.

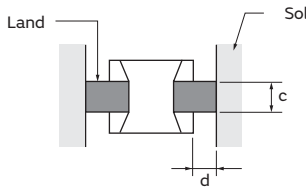
Soldering iron power output: 80W max.
Temperature of soldering iron tip: 350°C
Diameter of soldering iron end: 3.0mm max.
Soldering time: within 3 s

Please keep the fix time with the soldering iron within 2 times.

3. Mounting Instructions

(1) Land Pattern Dimensions

Large lands reduce Q of the mounted chip. Also, large protruding land areas (bordered by lines having dimensions 'c' and 'd' shown) cause floating and electrode leaching.



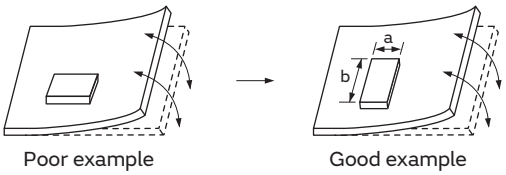
(2) Land Pattern Designing (LQW series)

Please follow the recommended patterns.
Otherwise, their performance, which includes electrical performance or solderability, may be affected, or result in “position shift” in the soldering process.

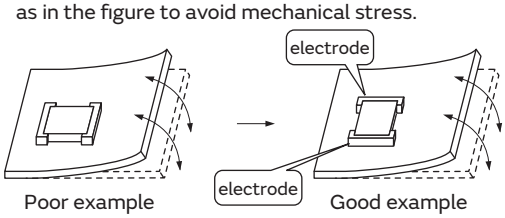
(3) PCB Warping

PCB should be designed so that products are not subjected to the mechanical stress caused by warping the board.

Products should be located in a sideways direction (Length: a<b) to the mechanical stress.



The electrode part of the product should be located as in the figure to avoid mechanical stress.



Continued on the following page.↗

RF Inductors Soldering and Mounting

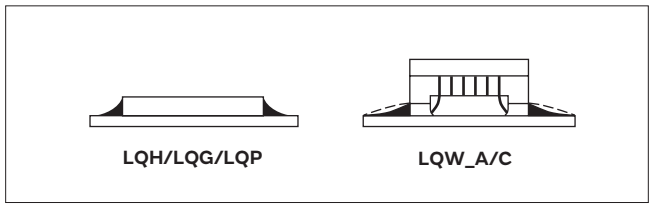
Continued from the preceding page.↘

(4) Amount of Solder Paste

Excessive solder causes electrode corrosion, while insufficient solder causes low electrode bonding strength. Adjust the amount of solder paste as shown on the right so that solder is applied.

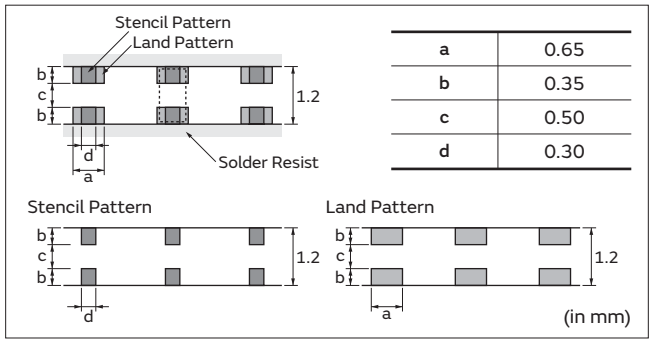
Guideline of solder paste thickness

· LQW15C: 50 to 100μm
· LQP03TN: 60 to 100μm
· LQG, LQW15A/LQW18A/C: 100 to 150μm
· LQH31H: 200 to 300μm



LQW15A Series:

Too much solder may cause slant or rotation of the chip at the time of solder melting. Please reduce the amount of solder by using a smaller solder area than the land pattern, as shown in the figure at right.



a	0.65
b	0.35
c	0.50
d	0.30

4. Cleaning

The following conditions should be observed when cleaning chip inductors (chip coils):

(1) Cleaning Temperature: 60°C max. (40°C max. for alcohol cleaning agents)

(2) Ultrasonic

Output: 20W/l max.
Duration: 5 minutes max.
Frequency: 28 to 40kHz
Care should be taken not to cause resonance of the PCB and mounted products.

(3) Cleaning agent

The following cleaning agents have been tested on individual components. Evaluation in complete assembly should be done prior to production.

(a) Alcohol cleaning agents

Isopropyl alcohol (IPA)

(b) Aqueous cleaning agents

Pine Alpha ST-100S

(4) Ensure that flux residue is completely removed.

Component should be thoroughly dried after aqueous agents have been removed with deionized water.

For additional cleaning methods, please contact Murata.

⚠Note

1 Export Control

For customers outside Japan:

No Murata products should be used or sold, through any channels, for use in the design, development, production, utilization, maintenance or operation of, or otherwise contribution to (1) any weapons (Weapons of Mass Destruction [nuclear, chemical or biological weapons or missiles] or conventional weapons) or (2) goods or systems specially designed or intended for military end-use or utilization by military end-users.

For customers in Japan:

For products which are controlled items subject to the "Foreign Exchange and Foreign Trade Law" of Japan, the export license specified by the law is required for export.

2 Please contact our sales representatives or product engineers before using the products in this catalog for the applications listed below, which require especially high reliability for the prevention of defects which might directly damage a third party's life, body or property, or when one of our products is intended for use in applications other than those specified in this catalog.

1. *Aircraft equipment*
2. *Aerospace equipment*
3. *Undersea equipment*
4. *Power plant equipment*
5. *Medical equipment*
6. *Transportation equipment (vehicles, trains, ships, etc.)*
7. *Traffic signal equipment*
8. *Disaster prevention / crime prevention equipment*
9. *Data-processing equipment*
10. *Application of similar complexity and/or reliability requirements to the applications listed above*

3 Product specifications in this catalog are as of November 2017. They are subject to change or our products in it may be discontinued without advance notice. Please check with our sales representatives or product engineers before ordering. If there are any questions, please contact our sales representatives or product engineers.

4 Please read rating and ⚠CAUTION (for storage, operating, rating, soldering, mounting and handling) in this catalog to prevent smoking and/or burning, etc.

5 This catalog has only typical specifications. Therefore, please approve our product specifications or transact the approval sheet for product specifications before ordering.

6 Please note that unless otherwise specified, we shall assume no responsibility whatsoever for any conflict or dispute that may occur in connection with the effect of our and/or a third party's intellectual property rights and other related rights in consideration of your use of our products and/or information described or contained in our catalogs. In this connection, no representation shall be made to the effect that any third parties are authorized to use the rights mentioned above under licenses without our consent.

7 No ozone depleting substances (ODS) under the Montreal Protocol are used in our manufacturing process.
