ISL43140, ISL43141, ISL43142

Low-Voltage, Single and Dual Supply, High Performance, Quad SPST, Analog Switches

FN6032
Rev 2.00
Aug 24, 2015

The Intersil ISL43140–ISL43142 devices are CMOS, precision, quad analog switches designed to operate from a single +2V to +12V supply or from a ±2V to ±6V supply. Targeted applications include battery powered equipment that benefit from the devices' low power consumption (1µW), low leakage currents (1nA max), and fast switching speeds (t_{ON} = 30ns, t_{OFF} = 18ns). A 12Ω maximum R_{ON} flatness ensures signal fidelity, while channel-to-channel mismatch is guaranteed to be less than 2.5Ω. The 3mm x 3mm Quad No-Lead Flatpack (QFN) package alleviates board space limitations, making this newest line of low-voltage switches an ideal solution.

The ISL43140/ISL43141/ISL43142 are quad single-pole/single-throw (SPST) devices. The ISL43140 has four normally closed (NC) switches; the ISL43141 has four normally open (NO) switches; the ISL43142 has two NO and two NC switches and can be used as a dual SPDT, or a dual 2:1 multiplexer.

Table 1 summarizes the performance of this family.

TABLE 1. FEATURES AT A GLANCE

	ISL43140	ISL43141	ISL43142 (No longer available or supported)
Number of Switches	4	4	4
Configuration	All NC	All NO	2 NC / 2 NO
10.8V R_{ON}	50Ω	50Ω	50Ω
10.8V t_{ON} / t_{OFF}	30ns / 18ns	30ns / 18ns	30ns / 18ns
±4.5V R_{ON}	50Ω	50Ω	50Ω
±4.5V t_{ON} / t_{OFF}	40ns / 15ns	40ns / 15ns	40ns / 15ns
4.5V R_{ON}	110Ω	110Ω	110Ω
4.5V t_{ON} / t_{OFF}	50ns / 20ns	50ns / 20ns	50ns / 20ns
2.7V R_{ON}	200Ω	200Ω	200Ω
2.7V t_{ON} / t_{OFF}	120ns / 25ns	120ns / 25ns	120ns / 25ns
Packages	16 Ld SOIC (N), 16 Ld 3x3 QFN, 16 Ld TSSOP		

Features

- Fully Specified at ±5V, 12V, 5V, and 3V Supplies for 10% Tolerances
- Four Separately Controlled SPST Switches
- Pin Compatible with DG411/DG412/DG413
- ON Resistance (R_{ON}) 50Ω
- R_{ON} Matching Between Channels. 2Ω
- Low Charge Injection . . . . . 5pC (Max)
- Low Power Consumption (P_D) . . . . . <1µW
- Low Leakage Current (Max at 85°C) 5nA
- Fast Switching Action
  - t_{ON} 30ns
  - t_{OFF} 18ns
- Guaranteed Break-Before-Make (ISL43142 only)
- Minimum 2000V ESD Protection per Method 3015.7
- TTL, CMOS Compatible
- Pb-free Available

Applications

- Battery Powered, Handheld, and Portable Equipment
  - Cellular/Mobile Phones
  - Pagers
  - Laptops, Notebooks, Palmtops
- Communications Systems
  - Military Radios
  - RF "Tee" Switches
- Test Equipment
  - Ultrasound
  - Electrocardiograph
- Heads-Up Displays
- Audio and Video Switching
- General Purpose Circuits
  - +3V/+5V DACs and ADCs
  - Digital Filters
  - Operational Amplifier Gain Switching Networks
  - High Frequency Analog Switching
  - High Speed Multiplexing

Truth Table

LOGIC	ISL43140	ISL43141	ISL43142	
	SW 1, 2, 3, 4	SW 1, 2, 3, 4	SW 1, 4	SW 2, 3
0	ON	OFF	OFF	ON
1	OFF	ON	ON	OFF

NOTE: Logic “0” ≤ 0.8V. Logic “1” ≥ 2.4V.

Pin Descriptions

PIN	FUNCTION
V+	Positive Power Supply Input
V-	Negative Power Supply Input. Connect to GND for Single Supply Configurations.
GND	Ground Connection
IN	Digital Control Input
COM	Analog Switch Common Pin
NO	Analog Switch Normally Open Pin
NC	Analog Switch Normally Closed Pin
N.C.	No Internal Connection

Ordering Information

PART NUMBER (BRAND) (NOTES 2, 3)	TEMP. RANGE (°C)	PACKAGE RoHS Compliant	PKG. DWG. #
ISL43140IBZ	-40 to 85	16 Ld SOIC (N)	M16.15

ISL43142IVZ **(No longer available, recommended replacement: ISL43120IHZ-T**)	-40 to 85	16 Ld TSSOP	M16.173

NOTES:

2. Most surface mount devices are available on tape and reel; add “-T” to suffix.
3. Intersil Pb-free products employ special Pb-free material sets; molding compounds/die attach materials and 100% matte tin plate termination finish, which is compatible with both SnPb and Pb-free soldering operations. Intersil Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J Std-020B.

Absolute Maximum Ratings

V+ to V- . . . . . -0.3 to15V
V+ to GND . . . . . -0.3 to15V
V- to GND . . . . . -15 to 0.3V
All Other Pins (Note 4) . . . . . ((V-) - 0.3V) to ((V+) + 0.3V)
Continuous Current (Any Terminal) 10mA
Peak Current, IN, NO, NC, or COM
(Pulsed 1ms, 10% Duty Cycle, Max) 20mA
ESD Rating (Per MIL-STD-883 Method 3015). . . . . >2kV

Operating Conditions

Temperature Range
ISL4314XIX . . . . . -40°C to 85°C

Thermal Information

Thermal Resistance (Typical, Note 5)	θ_{JA} (°C/W)
16 Ld SOIC Package	115
16 Ld QFN Package	75
16 Ld TSSOP Package	150

Maximum Junction Temperature (Plastic Package) . . . . . 150°C
Moisture Sensitivity (See Technical Brief TB363)
All Other Packages . . . . . Level 1
QFN Package. . . . . Level 2
Maximum Storage Temperature Range. . . . . -65°C to 150°C
Maximum Lead Temperature (Soldering 10s) . . . . . 300°C
(SOIC and TSSOP - Lead Tips Only)

CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

NOTES:

4. Signals on NC, NO, COM, or IN exceeding V+ or V- are clamped by internal diodes. Limit forward diode current to maximum current ratings.
5. θ_{JA} is measured with the component mounted on a low effective thermal conductivity test board in free air. See Tech Brief TB379 for details.

Electrical Specifications: ±5V Supply

NOTES:

6. V_{IN} = Input voltage to perform proper function.
7. The algebraic convention, whereby the most negative value is a minimum and the most positive a maximum, is used in this data sheet.
8. Leakage parameter is 100% tested at high temp, and guaranteed by correlation at 25°C.
9. Flatness is defined as the delta between the maximum and minimum R_{ON} values over the specified voltage range.
10. Between any two switches.

Electrical Specifications: 12V Supply Test Conditions: V+ = +10.8V to +13.2V, V- = GND = 0V, V_{INH} = 5V, V_{INL} = 0.8V (Note 6), Unless Otherwise Specified

Detailed Description

The ISL43140–ISL43142 quad analog switches offer precise switching capability from a bipolar ±2V to ±6V or a single 2V to 12V supply with low on-resistance (50Ω) and high speed switching (t_{ON} = 40ns, t_{OFF} = 15ns). The devices are especially well suited to portable battery powered equipment thanks to the low operating supply voltage (2V), low power consumption (1µW), low leakage currents (1nA max), and the tiny QFN packaging. High frequency applications also benefit from the wide bandwidth, and the very high off isolation and crosstalk rejection.

Supply Sequencing And Overvoltage Protection

With any CMOS device, proper power supply sequencing is required to protect the device from excessive input currents which might permanently damage the IC. All I/O pins contain ESD protection diodes from the pin to V+ and to V- (see Figure 8). To prevent forward biasing these diodes, V+ and V- must be applied before any input signals, and input signal voltages must remain between V+ and V-. If these conditions cannot be guaranteed, then one of the following two protection methods should be employed.

Logic inputs can easily be protected by adding a 1kΩ resistor in series with the input (see Figure 8). The resistor limits the input current below the threshold that produces permanent damage, and the sub-microamp input current produces an insignificant voltage drop during normal operation.

Adding a series resistor to the switch input defeats the purpose of using a low R_{ON} switch, so two small signal diodes can be added in series with the supply pins to provide overvoltage protection for all pins (see Figure 8). These additional diodes limit the analog signal from 1V below V+ to 1V above V-. The low leakage current performance is unaffected by this approach, but the switch resistance may increase, especially at low supply voltages.

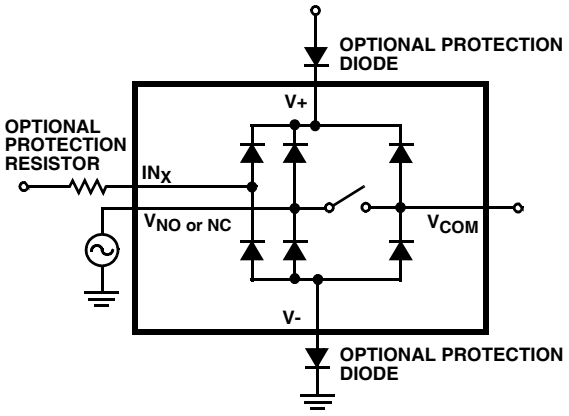

FIGURE 8. OVERVOLTAGE PROTECTION

Power-Supply Considerations

The ISL4314X construction is typical of most CMOS analog switches, in that they have three supply pins: V+, V-, and GND. V+ and V- drive the internal CMOS switches and set their analog voltage limits, so there are no connections between the analog signal path and GND. Unlike switches with a 13V maximum supply voltage, the ISL4314X 15V maximum supply voltage provides plenty of room for the 10% tolerance of 12V supplies (±6V or 12V single supply), as well as room for overshoot and noise spikes.

This family of switches performs equally well when operated with bipolar or single voltage supplies. The addition of the GND pin allows for asymmetrical bipolar supplies (e.g. +5V and -3V). The minimum recommended supply voltage is 2V or ±2V. It is important to note that the input signal range, switching times, and on-resistance degrade at lower supply voltages. Refer to the electrical specification tables and *Typical Performance Curves* for details.

V+ and GND power the internal logic (thus setting the digital switching point) and level shifters. The level shifters convert the logic levels to switched V+ and V- signals to drive the analog switch gate terminals, so switch parameters - especially R_{ON} - are strongly influenced by V-.

Logic-Level Thresholds

V+ and GND power the internal logic stages, so V- has no affect on logic thresholds. This switch family is TTL compatible (0.8V and 2.4V) over a V+ supply range of 2.5V to 10V (see Figure 17). At 12V the V_{IH} level is about 2.7V, so for best results use a logic family the provides a V_{OH} greater than 3V.

The digital input stages draw supply current whenever the digital input voltage is not at one of the supply rails. Driving the digital input signals from GND to V+ with a fast transition time minimizes power dissipation.

High-Frequency Performance

In 50Ω systems, signal response is reasonably flat even past 100MHz (see Figure 18). Figure 18 also illustrates that the frequency response is very consistent over a wide V+ range, and for varying analog signal levels.

An off switch acts like a capacitor and passes higher frequencies with less attenuation, resulting in signal feedthrough from a switch's input to its output. Off Isolation is the resistance to this feedthrough, while Crosstalk indicates the amount of feedthrough from one switch to another. Figure 19 details the high Off Isolation and Crosstalk rejection provided by this family. At 10MHz, off isolation is about 50dB in 50Ω systems, decreasing approximately 20dB per decade as frequency increases. Higher load impedances decrease Off Isolation and Crosstalk rejection due to the voltage divider action of the switch OFF impedance and the load impedance.

Leakage Considerations

Reverse ESD protection diodes are internally connected between each analog-signal pin and both V+ and V-. One of these diodes conducts if any analog signal exceeds V+ or V-.

Virtually all the analog leakage current comes from the ESD diodes to V+ or V-. Although the ESD diodes on a given signal pin are identical and therefore fairly well balanced, they are reverse biased differently. Each is biased by either V+ or V- and the analog signal. This means their leakages will vary as the signal varies. The difference in the two diode leakages to the V+ and V- pins constitutes the analog-signal-path leakage current. All analog leakage current flows between each pin and one of the supply terminals, not to the other switch terminal. This is why both sides of a given switch can show leakage currents of the same or opposite polarity. There is no connection between the analog signal paths and GND.

Revision History

The revision history provided is for informational purposes only and is believed to be accurate, but not warranted. Please go to the web to make sure that you have the latest revision.

DATE	REVISION	CHANGE
August 24, 2015	FN6032.2	Updated Ordering Information table on page 3. Added Revision History and About Intersil sections. Updated Package Outline Drawing (POD) M16.173 to the latest revision. -Revision 1 to Revision 2 changes - Converted to new POD format by moving dimensions from table onto drawing and adding land pattern. No dimension changes. Updated POD L16.3X3 to the latest revision. -Revision 1 to Revision 2 changes - Converted to new QFN template.

About Intersil

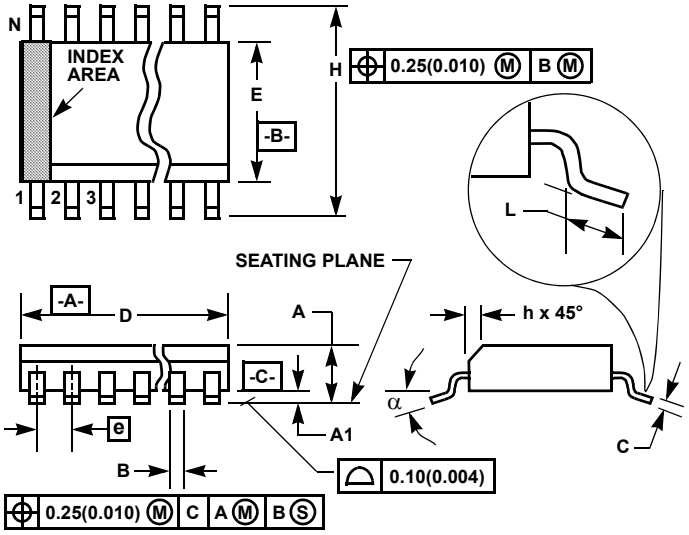
Intersil Corporation is a leading provider of innovative power management and precision analog solutions. The company's products address some of the largest markets within the industrial and infrastructure, mobile computing and high-end consumer markets.

For the most updated datasheet, application notes, related documentation and related parts, please see the respective product information page found at www.intersil.com.

You may report errors or suggestions for improving this datasheet by visiting www.intersil.com/ask.

Reliability reports are also available from our website at www.intersil.com/support

Small Outline Plastic Packages (SOIC)



NOTES:

1. Symbols are defined in the “MO Series Symbol List” in Section 2.2 of Publication Number 95.
2. Dimensioning and tolerancing per ANSI Y14.5M-1982.
3. Dimension “D” does not include mold flash, protrusions or gate burrs. Mold flash, protrusion and gate burrs shall not exceed 0.15mm (0.006 inch) per side.
4. Dimension “E” does not include interlead flash or protrusions. Interlead flash and protrusions shall not exceed 0.25mm (0.010 inch) per side.
5. The chamfer on the body is optional. If it is not present, a visual index feature must be located within the crosshatched area.
6. “L” is the length of terminal for soldering to a substrate.
7. “N” is the number of terminal positions.
8. Terminal numbers are shown for reference only.
9. The lead width “B”, as measured 0.36mm (0.014 inch) or greater above the seating plane, shall not exceed a maximum value of 0.61mm (0.024 inch).
10. Controlling dimension: MILLIMETER. Converted inch dimensions are not necessarily exact.

TYPICAL RECOMMENDED LAND PATTERN

NOTES:

1. Dimension does not include mold flash, protrusions or gate burrs. Mold flash, protrusions or gate burrs shall not exceed 0.15 per side.
2. Dimension does not include interlead flash or protrusion. Interlead flash or protrusion shall not exceed 0.25 per side.
3. Dimensions are measured at datum plane H.
4. Dimensioning and tolerancing per ASME Y14.5M-1994.
5. Dimension does not include dambar protrusion. Allowable protrusion shall be 0.08mm total in excess of dimension at maximum material condition. Minimum space between protrusion and adjacent lead is 0.07mm.
6. Dimension in ( ) are for reference only.
7. Conforms to JEDEC MO-153.
