⚠ REMINDERS
On not use or store in locations where there are conditions such as gas corrosion (salt, acid, alkali, etc.).
<ul> <li>Before soldering, be sure to preheat components.</li> <li>The preheating temperature should be set so that the temperature difference between the solder temperature and product temperature does not exceed 150°C.</li> </ul>
<ul> <li>Soldering corrections after mounting should be within the range of the conditions determined in the specifications.</li> <li>If overheated, a short circuit, performance deterioration, or lifespan shortening may occur.</li> </ul>
Self heating (temperature increase) occurs when the power is turned ON, so the tolerance should be sufficient for the set thermal design.
On on tuse for a purpose outside of the contents regulated in the delivery specifications.
