# VISHAY. www.vishay.com

## 489D, 499D

**Vishay Sprague** 

## **Resin-Coated, Radial-Lead Solid Tantalum Capacitors**

#### **ELECTRICAL CHARACTERISTICS**

**Operating Temperature:** -55 °C to +85 °C: type 489D -55 °C to +125 °C (above 85 °C, voltage derating is required): type 499D

#### FEATURES

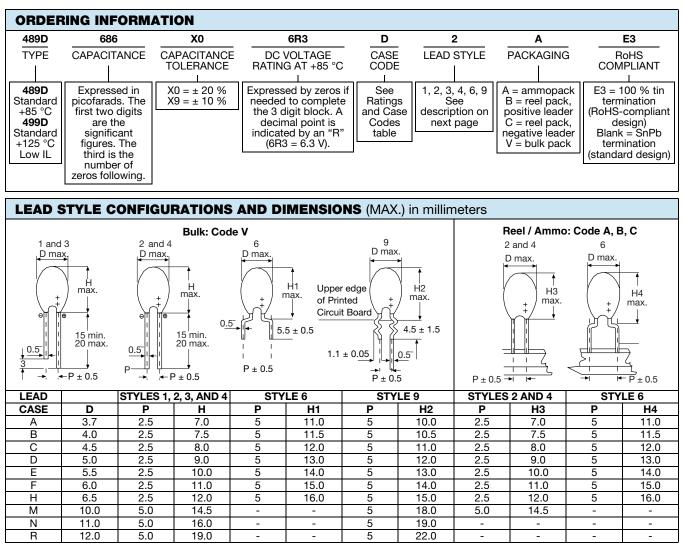

- Terminations: standard SnPb, 100 % tin available
- Large capacitance range
- Encapsulated in a hard orange epoxy resin
- Large variety of lead styles available
- Supplied on tape and reel or ammopack
- · Low impedance and ESR at high frequencies
- Material categorization: for definitions of compliance please see <u>www.vishav.com/doc?99912</u>

#### Note

\* This datasheet provides information about parts that are RoHS-compliant and / or parts that are non RoHS-compliant. For example, parts with lead (Pb) terminations are not RoHS-compliant. Please see the information / tables in this datasheet for details

#### **APPLICATIONS**

Offer a very cost effective solution in the consumer, industrial and professional electronics markets. The capacitors are intended for high volume applications.

Revision: 21-Feb-18

Document Number: 42070

Document Number: 42070

### PERFORMANCE CHARACTERISTICS

- 1. **Operating Temperature:** -55 °C to +85 °C with rated DC voltage U<sub>R</sub> applied. +85 °C to +125° C with linear voltage derating to category voltage UC for 499D only (see general information)
- Capacitance and Tolerance: capacitance measured at 100 Hz and +25 °C shall be within the specified tolerance limits of the nominal rating. Capacitance measurement shall be made by means of a polarized capacitance bridge. No polarizing voltage is required. The maximum voltage applied during measurements shall be 0.5 V<sub>RMS</sub> at 100 Hz and +25 °C.
- 3. Reverse Voltage: these capacitors are capable of withstanding peak voltage in the reverse direction equal to: 15 % of the rated DC voltage at +20 °C 10 % of the rated DC voltage at +25 °C 5 % of the rated DC voltage at +85 °C

#### 4. Surge Voltage:

| DC rated voltage<br>at +85 °C (V)                 | 3   | 6.3 | 10  | 16 | 20 | 25 | 35 | 50 |
|---|-----|-----|-----|----|----|----|----|----|
| DC surge voltage<br>at +85 °C (V)                 | 4   | 8   | 13  | 20 | 26 | 32 | 46 | 65 |
| DC rated voltage at +125 °C (V) <sup>(1)</sup>    | 2   | 4   | 7   | 10 | 13 | 17 | 23 | 33 |
| DC surge voltage<br>at +125 °C (V) <sup>(1)</sup> | 2.6 | 5.2 | 8.6 | 13 | 16 | 21 | 28 | 40 |

Note

(1) For 499D

Capacitors shall withstand the surge voltage applied in series with a 1000  $\Omega$  (± 5 %) resistor, at the rate of 1.5 min on, 5.5 min off for 1000 successive test cycles at +85 °C.

#### 5. Stability at low and high temperatures:

#### 489D - Table 2A

After test, capacitance change shall not exceed 10 % of initial value, dissipation factor and DC leakage current shall meet initial requirements at +25  $^\circ$ C - Table 2.

6. Life Test: after 2000 h at +85 °C with rated DC voltage applied, or after 1000 h at +125 °C. With derated DC voltage (only for 499D), capacitors shall meet the requirements in table below.

| Capacitance change | Within ± 10 % of initial value        |
|--------------------|---------------------------------------|
| DC leakage current | Within initial requirements at +25 °C |
| Dissipation factor | Within initial requirements at +25 °C |

7. **Humidity Test:** after 21 days (504 h) <sup>(1)</sup> at +40 °C, 90 % to 95 % of relative humidity (per IEC 68-2-3) with no voltage applied, capacitors shall meet the requirements in table below.

| Capacitance change | Within $\pm$ 5 % of initial value                  |
|--------------------|--|
| DC leakage current | Within initial requirements<br>at +25 °C - Table 2 |
| Dissipation factor | Within initial requirements<br>at +25 °C - Table 2 |

#### Note

<sup>(1)</sup> Humidity test is 56 days (1350 hours) for 499D

8. **Marking:** the capacitors shall be marked with the rated capacitance and the rated DC working voltage. A code may be used for both capacitance and voltage. Units rated at 6.3 volts are usually marked as 6 volts. The package shall be marked with full Vishay part number, date code, and quantity.

| TEMP.  | CAPACITANCE CHANGE     | DC LEAKAGE CURRENT <sup>(1)</sup>                                      | <b>DISSIPATION FACTOR AT 100 Hz</b>                                |                      |  |
|--------|------------------------|--|--|----------------------|--|
| -55 °C | -10 % of initial value |  | C <sub>B</sub> ≤ 1.5 µF  | 4 % max              |  |

#### Notes

<sup>(1)</sup> Rated voltage applied for 5 min with a series resistor of 1000  $\Omega$ 

<sup>(2)</sup> Only for 499 D

**Vishay Sprague** 

#### **GUIDE TO APPLICATION**

1. **AC Ripple Current:** the maximum allowable ripple current shall be determined from the formula:

$$I_{RMS} = \sqrt{\frac{P}{R_{ESR}}}$$

where,

P = power dissipation in W at +25 °C as given below

- R<sub>ESR</sub> = the capacitor Equivalent Series Resistance at the specified frequency
- 2. AC Ripple Voltage: the maximum allowable ripple voltage shall be determined from the formula:

$$V_{RMS} = \sqrt{\frac{P}{R_{ESR}}} \times Z$$

where,

Z = the capacitor impedance at the specified frequency

3. AC Ripple Current or Voltage Derating Factor: if these capacitors are to be operated at temperatures above +25 °C, the permissible RMS ripple current or voltage shall be calculated using the derating factors in the table below:

| TEMPERATURE | DERATING FACTOR |
|-------------|-----------------|
| +25 °C      | 1.0             |
| +55 °C      | 0.9             |
| +85 °C      | 0.8             |
| +125 °C     | 0.4             |

4. **Power Dissipation:** power dissipation will be affected by the heat sinking capability of the mounting surface. Non-sinusoidal ripple current may produce heating effects which differ from those shown in the following table. It is important that the equivalent I<sub>RMS</sub> value be established when calculating permissible operating levels.

| CASE CODE | POWER DISSIPATION AT +25 °C (W) |
|-----------|---------------------------------|
| A         | 0.080                           |
| В         | 0.090                           |
| С         | 0.100                           |
| D         | 0.110                           |
| E         | 0.120                           |
| F         | 0.130                           |
| Н         | 0.140                           |
| М         | 0.150                           |
| N         | 0.160                           |
| R         | 0.180                           |

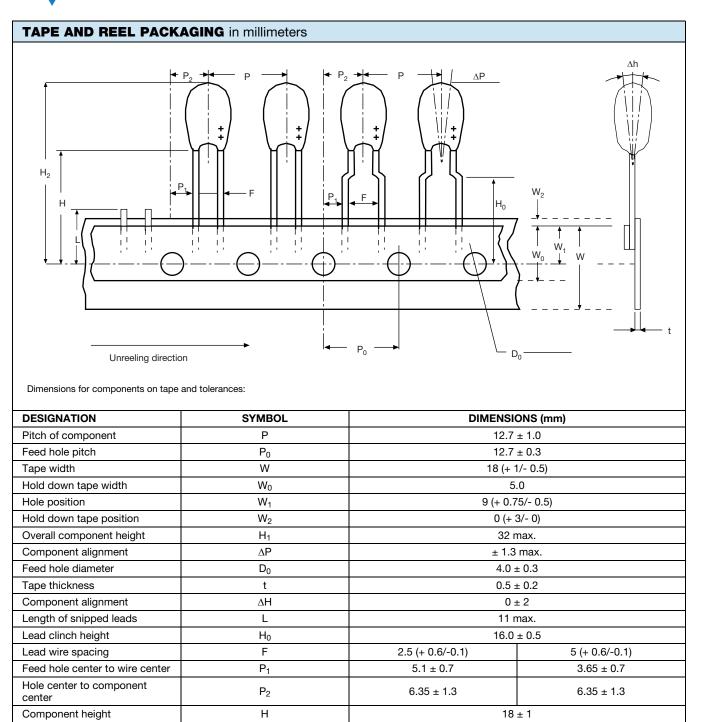

5. **Cleaning:** these capacitors are compatible with all commonly used solvents, such as TES, TMS, Prelete and Chloretane. Solvents containing methylene chloride or other epoxy solvents should be avoided since these will attack the epoxy encapsulation material.
