# JTAG Probes for ARM

## ADA-JET-ARM20 and ADA-JET-ARM14

Signum JTAG probes for ARM provide a physical interface between Signum emulators for the ARM processor and ARM target boards. These probes have 20-pin (ADA-JET-ARM20) and 14-pin (ADA-JET-ARM14) double-row, polarized, .100" × .100". (2.54 mm × 2.54 mm) female connectors. Signum JTAG probes come with a 30.5 cm (12 in.) cable. The layout and dimensions of the probes are shown in **Figure 1** through **Figure 10**.

FIGURE 1 The 20-pin JTAG ADA-JET-ARM20 probe for ARM.

FIGURE 2 The pinout of the ADA-JET-ARM20 probe. Top view.

FIGURE 3 The 14-pin JTAG ADA-JET-ARM14 probe for ARM.

FIGURE 4 The pinout of the 14-pin JTAG probe for ARM. Top view.

FIGURE 5 The dimensions of the ADA-JET-ARM14 probe with a cable extender. L = 63.0 mm (2.5 in.), C = 40.0 mm (1.55 in.) D = 6.0 mm (.24 in.), W = 22.5 mm (.9 in.), H = 11.5 mm (0.45 in.).

FIGURE 6 The dimensions of the ADA-JET-ARM20 probe. Top view. A = 19.3 mm (0.76 in.) [low-voltage: A = 24.3 mm (0.96 in.)] B = 30.5 mm (1.2 in.)

FIGURE 7 The dimensions of the ADA-JET-ARM20 probe. Side view. C = 22.7 mm (0.88 in.) D = 15.0 mm (0.59 in.) E = 11.0 mm (0.43 in.)

#### ADA-JET-ARM20-LV

Your emulator can also be ordered with a low-voltage variant of the JTAG probe (**Figure 8**), or with both standard and low-voltage variants. These two variants have identical pinouts, but slightly differ in dimensions (cf. the caption of **Figure 6**). The voltage range of the low-voltage probe is 1.8V – 3.3V ( $\pm 10\%$ ).

**Caution:** Voltages higher than 3.3V may permanently damage the low-voltage probe.

FIGURE 8 The 20-pin JTAG ADA-JET-ARM20-LV probe for ARM.

FIGURE 9 The pinout of the ADA-JET-ARM20-LV probe. Top view.

**Cable Extender**

In addition to its standard version shown on page 3, the 20-pin probe is offered in a version with a 1.55 in. ribbon cable extender that allows the probe to remain outside the target board by lowering the probe’s profile. (The 14-pin probe comes always with a ribbon cable extender.)

FIGURE 10 Top and side views of the 20-pin ARM probe with a cable extender. L = 69 mm (2.7 in.), C = 40.0 mm (1.55 in) D = 6.0 mm (.24), W = 30.0 mm (1.2 in.), H = 11.5 mm (0.45 in.).

**Target Board Header**

On the target board, we recommend using a polarized box header, such as:

14 - P I N	20 - P I N
14-Pin, Double-Row, Polarized Box Header-Straight, .100" × .100" (2.54 mm × 2.54 mm). Manufacturers: <ul style="list-style-type: none"><li>• 3M (Mouser Electronics, Part No. 517—2514-6002).</li><li>• tyco/AMP, Part No. 103308-2 – Digi-Key Part No A26269-ND.</li></ul>	20-Pin, Double-Row, Polarized Box Header-Straight, .100" × .100" (2.54 mm × 2.54 mm). Manufacturers: <ul style="list-style-type: none"><li>• 3M (Mouser Electronics, Part No. 517—2520-6002).</li><li>• tyco/AMP, Part No. 103308-5 – Digi-Key Part No. A26273-ND.</li></ul>

TABLE 3 Recommended target board headers.

## ADA-ARM-SWD

The ARM-SWD probe supports both ARM and Cortex boards at voltages 0.8V to 5.0V. It must be used when Cortex Serial Wire Debug or Cortex Serial Wire Output operation mode is required.

In addition to a standard 20-pin double-row female ARM connector, this probe has a 20-pin and 10-pin high-density Cortex connectors. Only one connector can be used at a time. The ARM connector, mounted underneath the probe, has the pinout of the ADA-JET-ARM20 probe (**Figure 12**). The pinouts of the 20-pin and 10-pin Cortex connectors are shown in **Figure 13** and **Figure 14**, respectively. The two high-density cables included with the probe provide a link between the Cortex connectors and the target board (**Figure 11**).

Figure 11 The ADA-ARM-SWD probe with the Cortex cables.

TABLE 4 ARM Cortex probe-mating headers by Samtec Inc.

## ARM Cortex Probe

### ADA-ARM20-Cortex

This passive adapter allows you to interface any Signum JTAGjet emulator that uses the 20-pin JTAG probe for ARM (ADA-JET-ARM20 or its low-voltage variant ADA-JET-ARM20-LV) with a Cortex-M target board. Both 20-pin and 10-pin high-density Cortex connectors are supported, but only one of them can be used at a time. The ARM connector of the probe has the pinout of the ADA-JET-ARM20 probe ([Figure 2](#)). The pinouts of the 20-pin and 10-pin Cortex connectors are shown in [Figure 13](#) and [Figure 14](#) (page 5), respectively.

FIGURE 15 The ADA-ARM20-SWD probe for the JTAGjet.

FIGURE 16 The dimensions of the ADA-ARM20-SWD probe.  $C = 23.6 \text{ mm}$  (0.93 in),  $D = 3.11 \text{ mm}$  (0.122 in),  $H = 5.1 \text{ mm}$  (0.2 in),  $L = 69.3 \text{ mm}$  (2.73 in),  $W = 15.73$  (0.62 in),  $W1 = 10.5 \text{ mm}$  (0.41 in),  $W2 = 16.9 \text{ mm}$  (0.67).

The mating JTAG headers for targets are the same as those for the ADA-ARM-SWD probe ([Table 4](#) on page 6).

# JTAG Probes for OMAP and TMS320 DSP

## ADA-JET-TI14

The Signum JTAG probe for OMAP devices, ADA-JET-TI14, provides a physical interface between Signum emulators for the OMAP processor and OMAP target boards. This probe is the same as that for the Texas Instruments TMS320 devices. It has 14-pin double-row, polarized, .100" × .100". (2.54 mm × 2.54 mm) female connectors. The pinout and dimensions of the probe are shown below (Figure 18 through Figure 20).

**Caution:** Voltages higher than 4.0V may permanently damage the low-voltage probe.

## ADA-JET-TI14-LV

Your emulator can also be ordered with a low-voltage, or—if so desired—with both standard and low-voltage—variants of the probe for OMAP devices. These two variants have slightly different dimensions (Figure 19). The voltage range of the low-voltage probe is 1.8 – 3.3V (± 10%).

FIGURE 17 The 14-pin JTAGjet probe for OMAP and TMS320 DSP.

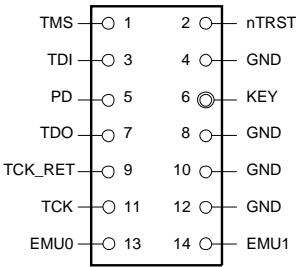

FIGURE 18 The TI14 pinout of the 14-pin JTAGjet probe for OMAP and TMS320 DSP.

FIGURE 19 The dimensions of the 14-pin JTAGjet probe for OMAP and TMS320 DSP. Top view. A = 18.5 mm (0.73 in.) [low-voltage: 23.0 mm (0.9 in.)], B = 18.3 mm (0.72 in.).

FIGURE 20 The dimensions of the 14-pin JTAGjet probe for OMAP and TMS320 DSP. Side view. C = 24 mm (.95 in.), D = 14.7 mm (0.58 in.), E = 8.5 mm (0.34 in.).

# JTAG TMS320 Isolation Probe

## ADA-ISO-TI14

The JTAG Isolation Probe for TMS320/470/570 Devices from Texas Instruments is a full isolation JTAG probe for JTAGjet emulators which reduces the chance of damage to the emulator associated with ground loops, voltage spikes, electrostatic discharge (ESD) and noise on power and ground lines generated by high-current motors and other machinery.

The probe fits between the JTAGjet emulator and the user's target board equipped with the Texas Instruments style 14-pin JTAG connector. The distinctive features of the ADA-ISO-TI14 include

- Support for all TMS320C2000, C5000, C6000, OMAP, DM and TMS470 / 570 devices
- Operating JTAG voltage from 3.0 V to 5.0 V ( $\pm 10\%$ )
- Galvanic isolation up to 1000 V (peak)\*
- 50kV/ $\mu$ s transient immunity (typical) on JTAG lines
- ESD protection of 8kV on contact and 15kV air discharge
- Maximum JTAG clock rate up to 15MHz

\* **Important Notice** The continuous normal operating voltage across the isolation barrier can be 0 – 60VDC. The isolation voltage only represents a measure of immunity to transient voltages—the probe should never be used as an element of a safety isolation system. This probe can be expected to function correctly with a few hundred volts offset applied continuously across the isolation barrier. However, the circuitry on both sides of the barrier is then regarded as operating at an unsafe voltage and additional isolation/insulation systems must be used in accordance with safety standard requirements.

**Signum Systems shall not be liable for any damages related to the use of this probe.**

FIGURE 21 The JTAGjet TMS320 ADA-ISO-TI14 isolation probe.

FIGURE 22 The TI14 pinout of the 14-pin JTAGjet TMS320 isolation probe.

FIGURE 23 The dimensions of the 14-pin JTAGjet isolation probe for TMS320 style devices. Top view. A = 32.0 mm (1.28 in), B = 20.8 mm (0.82 in), W = 29.0 mm (1.14 in).

FIGURE 24 The dimensions of the 14-pin JTAGjet isolation probe for TMS320 style devices. Side view. C = 20.5 mm (.81 in), D = 14.2 mm (0.56 in), E = 8.5 mm (0.33 in).

# Isolation Probe for TI-14 JTAG with an Optional External Power Input

## ADA-ISO-TI14-E

The isolation probe for TI-14 JTAG with an auxiliary power input ADA-ISO-TI14-E should be used in applications where the target board does not have enough current (about 150mA) to supply the isolation probe. When used with external power adapter, this probe reduces the current taken from the target board to approximately 1 mA.

The ADA-ISO-TI14-E probe requires a 5.0V VDC external power source to be connected to the J1 socket. The polarity for the J1 socket is center pin positive (+), outer collar negative (-). Reversed polarity may damage some electronic devices. If the external power supply is not connected, the isolation probe will automatically take power (about 150mA) from the target board. The auxiliary power adapter is not included with the isolation probe.

See also the specification of the ADA-ISO.

FIGURE 25 The ADA-ISO-TI14-E isolation probe with an auxiliary power input.

FIGURE 26 The TI14 pinout of the ADA-ISO-TI14-E probe. Top view.

FIGURE 27 The dimensions of the 20-pin ADA-ISO-TI14-E probe. Top view. A = 32.4 mm (1.28 in), B = 28.5 mm (1.12 in).

FIGURE 28 The ADA-ISO-TI14-E probe. Side view. C = 20.5 mm (.81 in.), D = 14.2 mm (0.56 in.), E = 8.5 mm (0.33 in.).

# Compact TI 20-pin JTAG probe for DaVinci

## ADA-JET-CTI20

The Signum JTAG ADA-JET-CTI20 probe provides a physical interface between the Signum JTAGjet-eBinder emulator and DaVinci, DM and OMAP target boards. This probe has 20-pin receptacles. The pin-to-pin X spacing is 0.10 in., Y spacing 0.05 in. The female connector on the probe is SAMTEC RSM-110-02-S-D. This is a low voltage probe operating in the 1.8 – 3.3V ( $\pm 10\%$ ) range. **Figure 30** shows the probe's pinout.

FIGURE 29 The ADA-JET-CTI20 probe for the Signum JTAGjet-eBinder emulator.

FIGURE 30 The cTI20 pinout of the ADA-JET-CTI20 probe. Top view.

FIGURE 31 Dimensions of the 20-pin CTI20 probe. Top view. A = 27.0 mm (1.06 in.) B = 17.8 mm (0.70 in.).

FIGURE 32 Dimensions of the 20-pin CTI20 probe. Side view. C = 23.0 mm (.91 in.), D = 12.5 mm (0.49 in.), E = 6.4 mm (0.25 in.).

The 4-position DIP switch on the CTI20 probe allows you to convert the EMU0 or EMU1 to a CPU reset line (**Figure 33**).

FIGURE 33 The DIP switches SW1-4 on the CTI20 probe in default setting positions.

	S W 1	S W 2	S W 3	S W 4
<b>Default – EMU01 and EMU1 controlled in standard way</b>	ON	OFF	ON	OFF
<b>Emulator's EMU0 connected to CTI20 probe's nSYSRST</b>	OFF	ON	ON	OFF
<b>Emulator's EMU1 connected to CTI20 probe's nSYSRST</b>	ON	OFF	OFF	ON
<b>EMU0, EMU1 and nSYSRST disconnected from target (only weak pull-up resistors used)</b>	OFF	OFF	OFF	OFF

TABLE 5 The allowed settings of the ADA-JET-CTI20 probe.

- Note 1** Set the SW1-4 switches only when the emulator and the target are not powered!
- Note 2** Do not set SW1-2 and SW3-4 pairs both ON. The setting will short the EMU0, EMU1 and nSYSRST lines on the target.
- Note 3** The nSYSRST, EMU0 and EMU1 lines are bi-directional and are driven by an open-collector gate in the emulator. EMU0 and EMU1 have 100K pull-ups to the PD pin on the probe side, while nSYSRST has 220K pull-up to the PD pin.
- Note 4** Certain JTAGjet driver packages may not easily allow configuring EMU0 and EMU1 as nSYSRST. Therefore it is recommended to leave the DIP switch in its default position. The software is unable to determine the position of this switch automatically. When SW2 or SW4 are ON, the software needs to be configured accordingly. Sample settings that allow EMU0 to act as a CPU reset signal (nSYSRST) are shown in **Figure 34**.

FIGURE 34 Configuring the JTAGjet-eBinder driver to use the EMU0 signal as the CPU reset signal (EmuDiag for the JTAGjet-eBinder).

All future releases of the JTAGjet software will allow the user to redefine the EMU0 and EMU1 pins as CPU reset pins.

## ETM Connector for ARM & OMAP

The JTAGjet-Trace series emulators come with an Embedded Trace Macrocell (ETM) cable terminated with a 38-pin Mictor connector. This connector is polarized and cannot be inserted the wrong way.

TABLE 6 The pinout of the ETM connector.

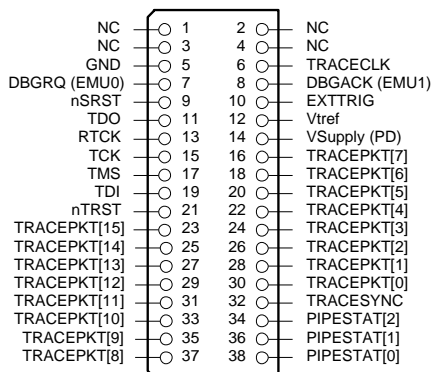

FIGURE 35 The pinout of the ETM38 connector when used with ARM targets.

## JTAG-ETM Splitter Probe

### ADA-ETM-JTAG

A typical target board has both the JTAG signals and the ETM signals connected to the same standard 38-pin ETM Mictor connector (see on p. 14). Some boards, however, separate the two types of signals, providing two different connectors for them. These boards require a JTAG-ETM splitter probe, ADA-ETM-JTAG. This probe is also useful when debugging an ARM or a DSP target board that does not have an ETM connector on it.

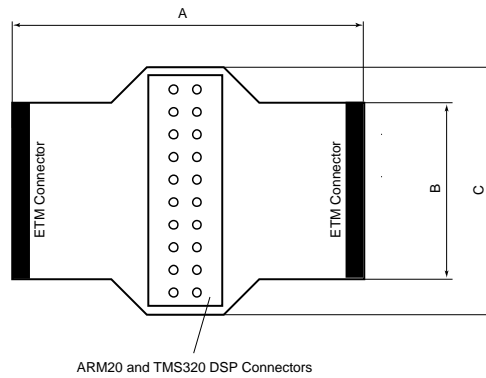

FIGURE 36 The JTAG-ETM splitter probe.

FIGURE 37 The dimensions of the JTAG-ETM splitter board. A = 52.0 mm (2.05 in), B = 25.4 mm (1 in), C = 33.9 mm (1.34 in).

FIGURE 38 The JTAG-ETM splitter board attached to the JTAGjet-Trace emulator. Connected to it are a 20-pin ARM JTAG cable and an ETM Mictor cable (lower). A receptacle for an additional 14-pin TMS320 DSP JTAG cable is located at the bottom of the board.

# Passive 20-pin Probe for Cortex ETM trace

## ADA-ETM-SWD20

This passive probe provides an interface between the Signum JTAGjet-Trace emulator and the 20-pin high-density connector on a Cortex target board. The pinout of the probe's Cortex connector is the same as the pinout of the ADA-ARM20-SWD probe's 20-pin connector (Figure 41). The probe's ETM connector has the pinout of ETM connector when used with ARM targets (Figure 42).

FIGURE 39 The ADA-ETM-SWD20 probe for Cortex boards with ETM trace.

FIGURE 40 The dimensions of the ADA-ETM-SWD20 probe. A = 19.12 mm (0.75 in), B = 3.11 mm (0.122 in), H = 5.1 mm (0.2 in), W1 = 16.9 mm (0.67), W = 25.7 (1.01 in), L = 65.5 mm (2.58 in).

FIGURE 42 The ETM32 pinout of the ETM side of the ADA-ETM-SWD20 probe. Top view.

## Active 12-pin MPSD Probe

### ADA-JET-MPSD

The Signum MPSD (modular port scan device) probe ADA-JET-MPSD provides a physical interface between JTAGjet emulators for the TMS320 3x family of DSPs and target boards. The probe has 12 double-row, polarized, 2.54 mm  $\times$  2.54 mm (.100"  $\times$  .100") receptacles (female connectors). To ensure proper orientation, the header is keyed. The ADA-JET-MPSD is a 5V Texas Instruments MPSD legacy adapter designed specifically for the Signum JTAGjet-C3x in-circuit emulator. It allows emulation at a maximum speed of 60 MHz. For the pinout, see **Figure 44**.
