SOLDER PROCEDURE OF UMP RECEPTACLE IN INDUSTRIAL ENVIRONMENT

1. Deposit solder paste ‘Sn Ag4 Cu0.5’ on mounting zone by screen printing application. We recommend a low residue flux.
   We advise a thickness of 150 micromm (5.850 microinch). Verify that the edges of the zone are clean.

2. Placement of the receptacle on the mounting zone with an automatic machine of ‘pick and place’ type.
   A video camera is recommended for positioning of the component.
   Adhesive agents must not be used on the receptacle.

3. This process of soldering has been tested with convection oven.
   Below please find, the typical profile to use.

4. The cleaning of printed circuit boards is not obliged.

5. Verification of solder joints and position of the component by visual inspection.

NOTE : THE UMP RECEPTACLE AND THE UMP PLUG MUST NOT BE MATED BEFORE COMPLETION OF THIS PROCEDURE.
