

# DRA

## Automotive grade

### High power density, high efficiency, shielded drum core power inductors

#### Product features

- AEC-Q200 qualified
- Five different mechanical sizes available
- Magnetically shielded-reduces EMI
- Ferrite core material
- Inductance range from 0.28 µH to 1000 µH
- Current range up to 56 A
- Rugged construction for high shock and vibration environments
- Moisture Sensitivity Level (MSL): 1

#### Applications

- Body electronics
  - Headlamps, tail lamps and interior lighting
  - Heating Ventilation and Air Conditioning controllers (HVAC)
  - Doors, window lift and seat control
- Advanced driver assistance systems
  - Adaptive cruise control (ACC)
  - Collision avoidance system
  - Car black box system
- Infotainment and cluster electronics
  - Audio subsystem: head unit and trunk amp
  - Digital instrument cluster
  - In-Vehicle Infotainment (IVI) and navigation
- Chassis and safety electronics
  - Electronic Stability Control system (ESC)
  - Electric parking brake
  - Electronic Power Steering (EPS)
- Engine and powertrain systems
  - Diesel/gasoline engine management
  - Powertrain Control Module (PCM)/Engine Control Unit (ECU)
  - Transmission Control Unit (TCU)

#### Environmental data

- Storage temperature range (component): -40 °C to +165 °C
- Operating temperature range: -40 °C to +165 °C (ambient plus self-temperature rise)
- Solder reflow temperature: J-STD-020 (latest revision) compliant

## High power density, high efficiency, shielded drum core power inductors

1. Open Circuit Inductance (OCL) Test Parameters: 100 kHz, 0.25 V<sub>rms</sub>, 0.0A dc @ +25 °C
2. I<sub>rms</sub>: DC current for an approximate temperature rise of 40 °C without core loss. Derating is necessary for AC currents. PCB layout, trace thickness and width, airflow and proximity of other heat generating components will affect the temperature rise. It is recommended that the temperature of the part not exceed +165 °C under worst case operating conditions verified in the end application.
3. I<sub>sat</sub>1: Peak current for approximately 30% rolloff at +25 °C.

4. I<sub>sat</sub>2: Peak current for approximately 40% rolloff at +125 °C.
5. K-factor: Used to determine B<sub>p-p</sub> for core loss (see graph). B<sub>p-p</sub> = K \* L \* ΔI. B<sub>p-p</sub>: (Gauss), K: (K-factor from table), L: (Inductance in µH), ΔI (peak-to-peak ripple current in amps).
6. Part Number Definition: DRAxxx-yyy-R
  - DRAxxx = Product code and size
  - yyy= Inductance value in uH, R = decimal point, if no R is present then third character = number of zeros.
  - -R suffix = RoHS compliant

DRA127-102-R	998.7	0.598	1.10	0.878	1.75	2.10	2.4

1. Open Circuit Inductance (OCL) Test Parameters: 100 kHz, 0.25 V<sub>rms</sub>, 0.0 Adc @ +25 °C

2. I<sub>rms</sub>: DC current for an approximate temperature rise of 40 °C without core loss. Derating is necessary for AC currents. PCB layout, trace thickness and width, air-flow and proximity of other heat generating components will affect the temperature rise. It is recommended that the temperature of the part not exceed +165 °C under worst case operating conditions verified in the end application.

3. I<sub>sat</sub> 1: Peak current for approximately 30% rolloff at +25 °C.

4. I<sub>sat</sub> 2: Peak current for approximately 40% rolloff at +125 °C.

5. K-factor: Used to determine B<sub>p-p</sub> for core loss (see graph). B<sub>p-p</sub> = K \* L \* ΔI. B<sub>p-p</sub>: (Gauss), K: (K-factor from table), L: (Inductance in µH), ΔI (peak-to-peak ripple current in amps).

6. Part Number Definition: DRAxxx-yyy-R

- DRAxxx = Product code and size
- yyyy = Inductance value in µH, R = decimal point, if no R is present then third character = number of zeros.
- -R suffix = RoHS compliant

**Dimensions - mm****DRA73 & DRA74**

**Part Marking:** ### = inductance value in  $\mu$ H, R = decimal point; if no R is present, then 3rd digit equals number of zeros  
**w/willy** = Date code, R = revision level  
All soldering surfaces to be coplanar within 0.10 millimeters  
Tolerances are  $\pm 0.2$  millimeters unless stated otherwise.  
Do not route traces or vias underneath the inductor  
\*Special Characteristic epoxy protrusion or any flashing from the plastic on the header/base can be below the terminal surface and must not exceed 0.08 mm beyond the bottom surface of the terminal.

**DRA124, DRA125 & DRA127**

**Part Marking:** DRAx<sub>x</sub>, xx = 124, 125 or 127, ### = inductance value in  $\mu$ H, R = decimal point; if no R is present, then 3rd digit equals number of zeros  
**w/willy** = Date code, R = revision level  
All soldering surfaces to be coplanar within 0.10 millimeters  
Tolerances are  $\pm 0.2$  millimeters unless stated otherwise.  
Do not route traces or vias underneath the inductor  
\*Special Characteristic epoxy protrusion or any flashing from the plastic on the header/base can be below the terminal surface and must not exceed 0.08 mm beyond the bottom surface of the terminal.

## High power density, high efficiency, shielded drum core power inductors

### Packaging information - mm

#### DRA73 & DRA74

Supplied in tape and reel packaging, on a 13" diameter reel:

- DRA73 - 1350 pieces
- DRA74 - 1100 pieces

Section A-A

#### DRA124, DRA125 & DRA127

Supplied in tape and reel packaging, on a 13" diameter reel:

- DRA124 - 750 pieces
- DRA125 - 600 pieces
- DRA127 - 350 pieces

### Solder Reflow Profile

Table 1 - Standard SnPb Solder ( $T_c$ )

Package	Volume mm <sup>3</sup>	Volume mm <sup>3</sup>
Thickness	<350	≥350
<2.5mm	235°C	220°C
≥2.5mm	220°C	220°C

Table 2 - Lead (Pb) Free Solder ( $T_c$ )

Package	Volume mm <sup>3</sup>	Volume mm <sup>3</sup>	Volume mm <sup>3</sup>
Thickness	<350	350 - 2000	>2000
<1.6mm	260°C	260°C	260°C
1.6 - 2.5mm	260°C	250°C	245°C
>2.5mm	250°C	245°C	245°C

### Reference JDEC J-STD-020

Profile Feature	Standard SnPb Solder	Lead (Pb) Free Solder
Preheat and Soak		
• Temperature min. ( $T_{smin}$ )	100°C	150°C
• Temperature max. ( $T_{smax}$ )	150°C	200°C
• Time ( $T_{smin}$ to $T_{smax}$ ) ( $t_s$ )	60-120 Seconds	60-120 Seconds
Average ramp up rate $T_{smax}$ to $T_p$	3°C/ Second Max.	3°C/ Second Max.
Liquidous temperature ( $T_L$ )	183°C	217°C
Time at liquidous ( $t_L$ )	60-150 Seconds	60-150 Seconds
Peak package body temperature ( $T_p$ )*	Table 1	Table 2
Time ( $t_p$ )** within 5 °C of the specified classification temperature ( $T_c$ )	20 Seconds**	30 Seconds**
Average ramp-down rate ( $T_p$ to $T_{smax}$ )	6°C/ Second Max.	6°C/ Second Max.
Time 25°C to Peak Temperature	6 Minutes Max.	8 Minutes Max.

\* Tolerance for peak profile temperature ( $T_p$ ) is defined as a supplier minimum and a user maximum.

\*\* Tolerance for time at peak profile temperature ( $t_p$ ) is defined as a supplier minimum and a user maximum.

Life Support Policy: Eaton does not authorize the use of any of its products for use in life support devices or systems without the express written approval of an officer of the Company. Life support systems are devices which support or sustain life, and whose failure to perform, when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in significant injury to the user.

Eaton reserves the right, without notice, to change design or construction of any products and to discontinue or limit distribution of any products. Eaton also reserves the right to change or update, without notice, any technical information contained in this bulletin.
