## Switchmode/High Frequency Gate Drive Transformers

## GDE25-4

## Description:

Triad gate drive transformers are used universally in all high frequency switching topologies to isolate the control circuitry from the line-connected switches. The Windings are interleaved for the lowest possible leakage inductance. Turn ratios optimize coupling and enhance performance. Available with single or dual secondaries, these transformers are constructed of UL rated $130^{\circ}$ materials and are easily standardized at operating frequencies of 200 kHz and beyond.

## Electrical Specifications (@25C):

| Max <br> DCR 1-2 | Max <br> DCR Gate | Min. <br> ET Product | Max. <br> Leakage | Min. <br> Inductance | Turns <br> Ratio |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $.875 \Omega$ | $.650 \Omega$ | $840 \mathrm{~V} \mu \mathrm{Sec}$ | $3.5 \mu \mathrm{H}$ | 1.50 mH | $1.5: 1: 1$ |

Weight: . 045 oz.

## Technical Notes:

1. Drive to gate winding hi-pot tested at 3,750 VRMS
2. Derate ET product by $32 \%$ for $50 \mathrm{kHz}, 50 \%$ for 100 kHz and for unidirectional operation.
3. Operation at rated current per winding renders approximately $40^{\circ}$ temperature rise.

## Schematic

RoHS Compliance: As of manufacturing date February 2005, all standard products meet the requirements of 2011/65/EU, known as the RoHS initiative.
