QUARTZ CRYSTAL OSCILLATOR

-- 2. 2~2. 8V

GENERAL DESCRIPTION

The NJU6395 series is a low voltage operation C-MOS quartz crystal oscillator which is possible to 65MHz. It consists of an oscillation amplifier and a 3-state output buffer.

The oscillation amplifier incorporates feed-back resistance and oscillation capacitors (Cg, Cd), therefore it requires no external component except quartz crystal.

The driverbility of the 3-state output buffer is 6mA, thus it can drive C-MOS load.

■ FEATURES

JRC

- Low Operating Voltage
- Recommended Oscillation Frequency -- 45 to 65MHz
- High Fan-out
- -- lol/loн=6mA @2.5V Oscillation Stop and Output Buffer Stand-by Function
- 3-state Output Buffer
- Oscillation Capacitors Cg and Cd on-chip
- Package Outline -- Chip/Thin-Chip
- C-MOS Technology
