SCBS173N - NOVEMBER 1991 - REVISED MARCH 2002

- Compatible With IEEE Std 1194.1-1991 (BTL)
- TTL A Port, Backplane Transceiver Logic (BTL) B Port
- Open-Collector B-Port Outputs Sink 100 mA
- High-Impedance State During Power Up and Power Down
- BIAS V_{CC} Pin Minimizes Signal Distortion During Live Insertion or Withdrawal
- B-Port Biasing Network Preconditions the Connector and PC Trace to the BTL High-Level Voltage

description

The SN74FB2040 is an 8-bit transceiver designed to translate signals between TTL and backplane transceiver logic (BTL) environments.

The \overline{B} port operates at BTL-signal levels. The open-collector \overline{B} ports are specified to sink 100 mA. Two output enables (OEB and \overline{OEB}) are provided for the \overline{B} outputs. When OEB is high and \overline{OEB} is low, the \overline{B} port is active and reflects the inverse of the data present at the A-input pins. When OEB is low, \overline{OEB} is high, or V_{CC} is less than 2.1 V, the \overline{B} port is turned off.

The A port operates at TTL-signal levels and has separate input and output pins. The A outputs reflect the inverse of the data at the \overline{B} port when the A-port output enable (OEA) is high. When OEA is low or when V_{CC} is less than 2.1 V, the A outputs are in the high-impedance state.

The pins TMS, TCK, TDI, and TDO are nonfunctional, i.e., not intended for use with the IEEE Std 1149.1 (JTAG) test bus. TMS and TCK are not connected, and TDI is shorted to TDO.

BIAS V_{CC} establishes a voltage between 1.62 V and 2.1 V on the BTL outputs when V_{CC} is not connected.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)[†]

Supply voltage range, V_{CC} Input voltage range, V_{I} : Except \overline{B} port \overline{B} port Voltage range applied to any \overline{B} output in the disabled or power-off state, V_{O} Voltage range applied to any output in the high state, V_{O} : A port Input clamp current, I_{IK} : Except \overline{B} port Current applied to any single output in the low state, I_{O} : A port \overline{B} port	$\begin{array}{cccc} -1.2 \ V \ to \ 7 \ V \\ -1.2 \ V \ to \ 3.5 \ V \\ -0.5 \ V \ to \ 3.5 \ V \\ -0.5 \ V \ to \ 3.5 \ V \\ -0.5 \ V \ to \ V_{CC} \\ -40 \ mA \\ -18 \ mA \\ -18 \ mA \end{array}$
Package thermal impedance, θ_{JA} (see Note 1)	
Storage temperature range, T _{stg}	–65°C to 150°C

[†] Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTE 1: The package thermal impedance is calculated in accordance with JESD 51-7.

recommended operating conditions (see Note 2)

			MIN	NOM	MAX	UNIT
V _{CC} , BIAS V _{CC} , BG V _{CC}	Supply voltage	4.5	5	5.5	V	
Maria	High level input veltage		1.62		2.3	N.
VIH	High-level input voltage	Except B port	2			V
M		B port	0.75		1.47	- V
VIL	Low-level input voltage	Except B port			0.8	
IIK	Input clamp current			-18	mA

SCBS173N - NOVEMBER 1991 - REVISED MARCH 2002

PARAMETER MEASUREMENT INFORMATION

NOTES: A. CL includes probe and jig capacitance.

- B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
- C. All input pulses are supplied by generators having the following characteristics: TTL inputs: PRR \leq 10 MHz, Z_O = 50 Ω , t_f \leq 2.5 ns, t_f \leq 2.5 ns; BTL inputs: PRR \leq 10 MHz, Z_O = 50 Ω , t_f \leq 2.5 ns, t_f \leq 2.5 ns.
- D. The outputs are measured one at a time with one transition per measurement.

PACKAGING INFORMATION

Orderable Device	Status	Package Type	Package	Pins	Package	Eco Plan	Lead/Ball Finish	MSL Peak Temp	Op Temp (°C)	Device Marking	Samples
	(1)		Drawing		Qty	(2)	(6)	(3)		(4/5)	
SN74FB2040RCG3	ACTIVE	QFP	RC	52	96	Green (RoHS & no Sb/Br)	SN	Level-3-260C-168 HR	0 to 70	FB2040	Samples

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

⁽²⁾ RoHS: TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (CI) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

⁽³⁾ MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

⁽⁴⁾ There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.
