

MOSFETs

Toshiba's MOSFETs Meet a Wide Range of Application Needs.

Toshiba offers an extensive portfolio of low- V_{DS} and mid/high- V_{DS} MOSFETs in various circuit configurations and packages, featuring high speed, high performance, low loss, low on-resistance, small packaging, etc. Toshiba has decades of experience in the development and manufacturing of MOSFETs. Its main products include the mid-to high-voltage DTMOSIV Series with a V_{DS} of 600 V or so and the low-voltage U-MOSVIII-H Series with a V_{DS} of 30 V to 250 V.

Structures of Toshiba MOSFETs

Double-Diffusion Structure

● π -MOS

Toshiba Power MOSFETs use a double-diffusion MOS (D-MOS) structure, which provides high withstand voltage, to form channels. This structure is especially well suited to high withstand voltage and high-current devices.

A high level of integration yields a high-performance Power MOSFET with low on-resistance and low power loss.

Trench Structure

● U-MOS

Higher channel density is achieved by connecting channels vertically to form a U-groove at the gate region, a structure that yields a lower on-resistance than other MOSFET structures. The trench structure is primarily used for relatively low- V_{DS} MOSFETs.

Super-Junction Structure

● DTMOS

The super-junction structure, which has P-type pillar layers as shown at left, realizes high withstand voltage and on-resistance lower than the conventional theoretical limit of silicon.

Low- V_{DS} MOSFETs Applications

Toshiba offers U-MOSVIII-H and other series with a V_{DS} ranging from 12 V to 250 V. These MOSFET series combine advanced trench-gate process and packaging technologies to deliver low on-resistance and high-speed switching. Our product portfolio includes an extensive array of MOSFETs in small packages suitable for various applications.

■ MOSFET Lineup

For general specifications of the MOSFETs shown in block diagrams, see the product selection tables on the following pages.

Block Diagrams	Product Lineups	Reference
AC-DC power supplies / AC adapters Isolated DC-DC converters Non-isolated DC-DC converters	High-speed switching	Pages 7 to 17 (High-speed series)
	High-speed switching Load switches	Pages 7 to 17 (High-speed series) Pages 18 to 21 (Low-on-resistance series)

■ Application Example for a Mobile Device

As the battery capacity for mobile devices increases, the charging current also increases. To meet the high-current need, Toshiba offers MOSFETs in small packages featuring high power dissipation. These MOSFETs are suitable for switching applications in high-current charger circuits.

High-Speed Series for Switching Power Supply Applications

U-MOSVIII-H is a high-efficiency MOSFET series specifically designed for use in the secondary side of AC-DC power supplies for notebook PC adapters, game consoles, servers, desktop PCs, flat-panel displays, etc., as well as DC-DC power supplies for communication equipment, servers and data centers. Fabricated with the latest Gen-8 trench MOS process, U-MOSVIII-H will help improve the efficiency of power supplies.

U-MOSVIII-H Series: Latest-generation trench MOS

In order to help improve the efficiency of switching power supplies, MOSFETs must exhibit not only low on-resistance but also low capacitance, which is directly related to maximum possible switching speeds. Fabricated using a state-of-the-art process, the U-MOSVIII-H Series provides on-resistance lower than 1 m Ω and a switching speed 56% faster than the U-MOSVII-H Series.

Features of the U-MOSVIII-H Series

- Fabricated with a Gen-8 trench MOS process designed for various power supply applications
- On-resistance, $R_{DS(ON)}$, less than 1 m Ω
TPHR9003NL: $R_{DS(ON)} = 0.77$ m Ω ($V_{GS} = 10$ V, $I_D = 30$ A)
- Provides significantly better trade-offs between on-resistance and input capacitance
- Offers high avalanche ruggedness
- Available in various packages

Packages for the High-Speed MOSFET Series

High-speed MOSFETs are mainly housed in small surface-mount packages that are ideal for space-critical applications.

Non-isolated DC-DC Converters

Many DC-DC converters are deployed in smartphones and other mobile devices that are becoming smaller, lighter and more feature-rich. While non-isolated DC-DC converters are primarily used for applications requiring less than 1 W to less than 30 W, up to 100 W can be handled by adding a single MOSFET.

Circuit Configuration Examples

Synchronous-rectified step-down converter

High-Speed Switching

The U-MOSVIII-H Series exhibits high-speed switching speed thanks to the industry's best R_{on} - C_{rss} performance.

Step-up converter

Reduced Switching Noise

As a consequence of the snubber effect, the U-MOSVIII-H Series suppresses switching noise and ringing more effectively than the U-MOSVII-H Series.

Recommended Products for Synchronous-Rectified Step-Down DC-DC Converter Applications

The optimal pair of a high-side and a low-side MOSFET depends on the required output current. The following table gives examples of recommended MOSFET pairs according to the output current requirement.

Input-to-output voltage ratio		Output Current					
		Up to 5 A	Up to 10 A	Up to 15 A	Up to 20 A	Up to 25 A	Up to 30 A

Isolated DC-DC Converters

Isolated DC-DC converters are widely used for applications in which there is a large difference in voltage between the primary and secondary sides of a transformer. Isolated full-bridge converters can handle up to 800 W.

AC-DC Converters (Synchronous Rectifier Section)

Flyback power supplies have a very simple circuit configuration that consists of a minimal part count. They are suitable for low-power power supplies. Full-bridge power supplies are suitable for relatively high-power power supply applications in the range of 1 kW to 3 kW.

* See the section "Mid- to High- V_{DS} MOSFETs" on pages 22 to 27 for a description and a list of MOSFETs for primary-side switching and PFC applications.

Full-Bridge

Reduction of On-Resistance

The U-MOSVIII-H Series provides the industry's highest performance in terms of on-resistance per die area (R_{onA}), making it ideal for applications that require higher efficiency, smaller size, etc.

Improved Efficiency

The U-MOSVIII-H Series provides about the same efficiency as competitors' devices at heavy loads and higher efficiency at light loads under the test conditions shown below*.

*Test conditions: 120-W adapter, $V_{in} = 100$ Vac, $V_{out} = 19.5$ V, critical conduction mode (CRM)

As smartphones, tablet PCs and other mobile devices become more sophisticated and feature-rich, their battery drive circuits are becoming more versatile and densely packed. Consequently, MOSFETs with small form factors, low on-resistance, high current ratings, low capacitance and high permissible power dissipation are required. To meet these needs, Toshiba has developed new process and packaging technologies to realize MOSFETs ideal for high-performance power supply applications.

Feature

Toshiba offers MOSFETs specifically optimized for on-resistance, which exhibit lower on-resistance than those for general-purpose switching power supply applications in the same generation.

Packages

Toshiba has endeavored to reduce the MOSFET on-resistance by using the latest small-geometry process and improving package structures.

Product Lineup Low-On-Resistance Series for Load Switch and Battery Pack Protection Applications

Surface-Mount MOSFETs of the Low-On-Resistance MOSFET Series

Fourth-Generation DTMOSIV Super-Junction MOSFET Series

Fabricated using the state-of-the-art single epitaxial process, DTMOSIV provides a 30% reduction in $R_{on,A}$, a figure of merit (FOM) for MOSFETs, compared to its predecessor, DTMOSIII. A reduction in $R_{on,A}$ makes it possible to house lower- R_{on} chips in the same packages. This helps to improve the efficiency and reduce the size of power supplies.

DTMOSIV Lineup

Toshiba is planning to expand its MOSFET portfolio to meet diverse customer needs.

Standard DTMOSIV Series	$V_{DSS} = 600$ V $V_{DSS} = 650$ V	• 600 V Series • Improved performance because of reduced $R_{on,A}$ • Helps to improve the efficiency of various power supplies • 650 V Series • Higher breakdown voltage thanks to an improvement of the 600-V version • Easy to allow sufficient voltage tolerance margins for power supply designs
High-Speed Switching DTMOSIV Series	$V_{DSS} = 600$ V	
DTMOSIV(HSD) Series with a high-speed diode	$V_{DSS} = 600$ V $V_{DSS} = 650$ V	

Features of the DTMOSIV-H Series

The DTMOSIV-H Series features high-speed switching performance and thus low switching loss. It provides gate-drain capacitance, Q_{gd} , approximately 30% lower than standard MOSFET series.

Dynamic Input/Output Characteristics: Q_g Curves

Features of the DTMOSIV(HSD) Series

The DTMOSIV(HSD) Series has a parasitic diode faster than that of the standard series. It delivers reverse recovery time more than 70% shorter than the standard series, and thus significantly reduces the recovery loss incurred by the parasitic diode.

Reverse-Recovery Waveform of the Parasitic Diode

Comparisons of Typical Performance Characteristics

DTMOSIV	Standard Series	High-Speed Diode
Part number	TK16A60W	TK16A60W5
Rating	600 V/15.8 A	600 V/15.8 A
On-resistance	0.19Ω Max	0.23Ω Max
Recovery time (trr)	280 ns	100 ns

DTMOSIV(HSD): High-speed diode series

New-Generation π -MOS Series

The π -MOSVII Series, the latest addition to our π -MOS portfolio, features reduced capacitance by virtue of the optimized chip design. The π -MOSVII Series has significantly expanded our MOS product lineup.

π -MOSVII Series ($V_{DS} = 400\text{ V}$ to 650 V)

Features

- Delivers approximately 40% lower total gate charge, Q_g , than π -MOSVI
- Available in 50-V steps of V_{DS} and in finer steps of $R_{DS(ON)}$.
- Rated avalanche and reverse recovery current capabilities

Performance Comparisons Between π -MOSVII and π -MOSVI Devices (600 V/10 A)

Characteristic	Symbol	Test Conditions	π -MOSVII			π -MOSVI			Unit
			Min	Typ.	Max	Min	Typ.	Max	
Gate leakage current	$\pm I_{GSS}$	V_{GS} condition*, $V_{DS} = 0\text{ V}$	—	—	± 1	—	—	± 10	μA
Drain cut-off current	I_{DSS}	$V_{DS} = 600\text{ V}$, $V_{GS} = 0\text{ V}$	—	—	10	—	—	100	μA
Drain-source breakdown voltage	$V_{(BR)DSS}$	$I_D = +10\text{ mA}$, $V_{GS} = 0\text{ V}$	600	—	—	600	—	—	V
Gate threshold voltage	V_{th}	$V_{DS} = 10\text{ V}$, $I_D = 1\text{ mA}$	2.0	—	4.0	2.0	—	4.0	V
Drain-source on-resistance	$R_{DS(ON)}$	$V_{GS} = 10\text{ V}$, $I_D = 5\text{ A}$	—	—	0.75	—	—	0.75	Ω
Total gate charge	Q_g	$V_{DD} = 400\text{ V}$, $V_{GS} = 10\text{ V}$, $I_D = 10\text{ A}$	—	25	—	—	42	—	nC
Diode forward voltage	V_{DSF}	$I_{DR} = 10\text{ A}$, $V_{GS} = 0\text{ V}$	—	—	-1.7	—	—	-1.7	V

*: Test conditions: TK10A60D: $V_{GS} = \pm 30\text{ V}$, 2SK3569: $V_{GS} = \pm 25\text{ V}$

Efficiency Test Circuit

π -MOSVIII Series ($V_{DS} = 800\text{ V}$ to 900 V)

Features

- Exhibits approximately 25% lower total gate charge, Q_g , than π -MOSVII (rated at 800 V to 900 V)
- Guarantees avalanche and reverse recovery ruggedness as current ratings.

Comparisons of Total Gate Charge (Q_g)

Provides approx. 25% lower Q_g than the previous generation and thus reduces switching loss

Switching Waveforms

Test conditions: $V_{DS} = 400\text{ V}$,
 $V_{GS} = 10\text{ V}$, $I_D = 4.5\text{ A}$, $T_c = 25^\circ\text{C}$

Toshiba's Ongoing Efforts for Automotive MOSFETs

Toshiba offers an extensive line of power devices such as power MOSFETs for various automotive applications, including 12-V battery and motor control systems.

The combination of low-ON-resistance and fast switching speed makes Toshiba's power MOSFETs an ideal solution for reducing system losses, thereby contributing to the energy-saving of automotive applications.

■ Features

- Reduced R_{onA} due to the small-geometry trench process
- The DPAK+ and TO-220SM(W) Series provide a current drive capability approx. twice that of their predecessors due to the use of a Cu connector structure.
- Expanding portfolio of MOSFETs qualified up to 175°C according to AEC-Q101
- For applications rated at 60 A or less, expanding portfolio of power MOSFETs in SOP packages (SOP Advance, TSON Advance, PS-8), which have been well proven for consumer applications
- All devices are tested and guaranteed for avalanche breakdown protection.
- Zener diode between gate and source for ESD protection (except some devices)

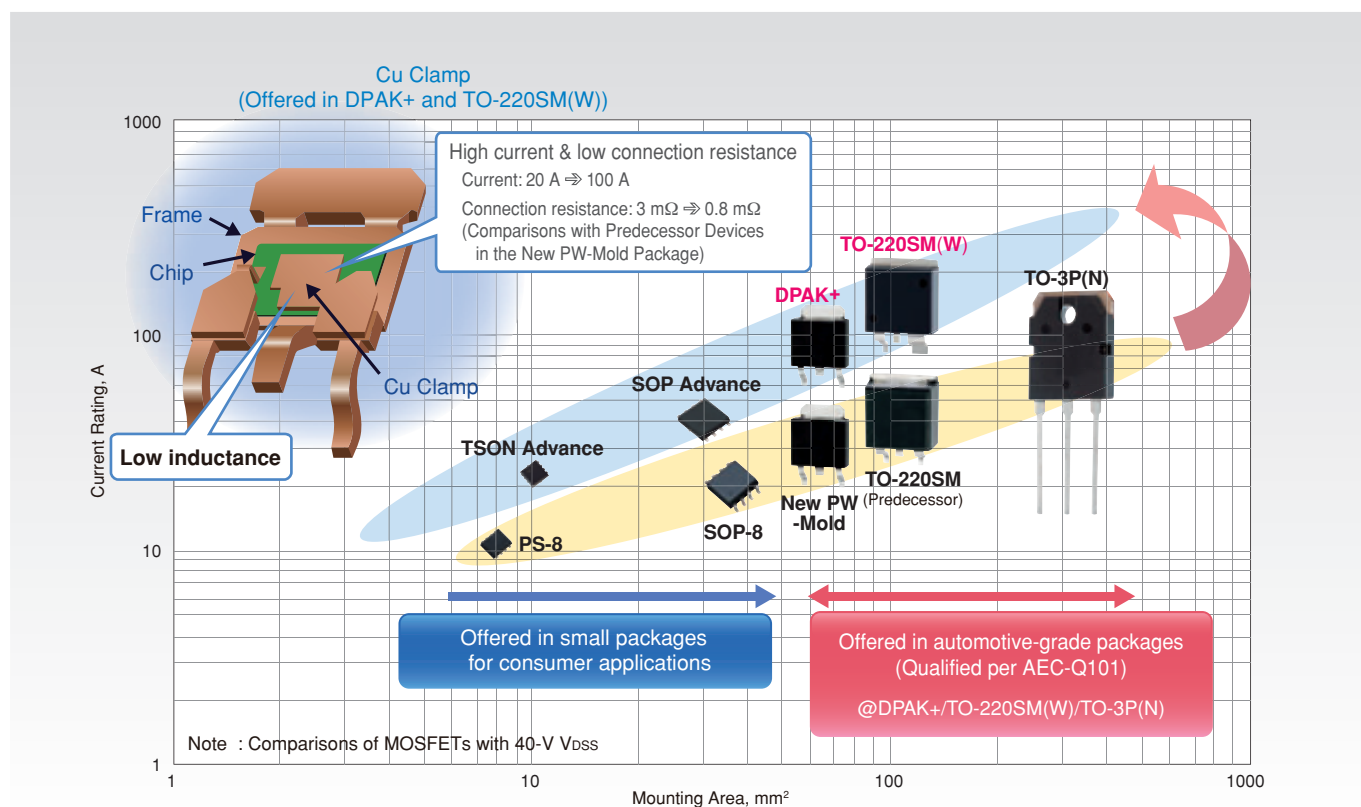

■ Low ON-Resistance

Industry's lowest ON-resistance due to the combined use a small-geometry trench structure and a Cu connector

■ Packaging Trend

Increased current density due Cu clamp structure

Product Lineup

U-MOS (Trench Type) Series for Automotive Applications

Fabricated using a trench structure, the U-MOS Series realizes ultra-high integration density and thus ultra-low on-resistance.

Features

- High density through the use of submicron technology
- Guaranteed avalanche capability and improved di/dt rate
- AEC-Q101-qualified at a channel temperature (Tch) of 175°C, except some devices (See the Tch column below.)

Trench (U-MOS) Structure

With protection Zener diode between gate and source

Note: If you want to use any devices listed above for "Unintended Use" including automotive applications, contact your local Toshiba sales representative.

MOSFETs Qualified for Automotive Grade (Except Some Devices) in Small Packages with a T_{ch} Range of up to 175°C

The MOSFETs listed below are housed in small packages for commercial applications and support channel temperatures (T_{ch}) up to 175°C.

Features

- Guaranteed up to 175°C

SOP Advance

Thin, thermally enhanced package with the same size as SOP-8 suitable for medium-power applications

Product Lineup

Polarity	Part Number	Absolute Maximum Ratings			R _{DS(ON)} Max (mΩ)		Ciss Typ. (pF)	Crss Typ. (pF)	Qg Typ. (nC)	T _{ch} (°C)	Series

SOT-23F

The following MOSFETs are suitable for small-relay, solenoid and motor drive applications. The SOT-23F package provides approximately 1.6 times better thermal dissipation than the conventional package.

Electronic Power Steering (EPS) System

EPS systems are finding widespread use in automobiles to improve mileage. Here are block diagrams of EPS systems that use power MOSFETs for motor driver, power supply and motor relay applications in EPS systems.

System Block Diagram

Recommended Products

Block	Package	Part number	Feature	Rel. Level
Motor control Semicon. relays	DPAK+	TK80S04K3L	Nch, 40 V/80 A, 3.1 mΩ, T _{ch} = 175°C	AEC-Q101 qualified
		TK100S04N1L	Nch, 40 V/100 A, 2.3 mΩ, T _{ch} = 175°C	AEC-Q101 Under consideration
	TO-220SM(W)	TK100F04K3L	Nch, 40 V/100 A, 3.0 mΩ, T _{ch} = 175°C	AEC-Q101 qualified
		TK150F04K3L	Nch, 40 V/150 A, 2.1 mΩ, T _{ch} = 175°C	AEC-Q101 qualified
	TO-220SIS	TK(200)F04N1L **	Nch, 40 V/(200) A, (0.9) mΩ, T _{ch} = 175°C	AEC-Q101 Under consideration
		TK80A04K3L	Nch, 40 V/80 A, 2.4 mΩ, T _{ch} = 175°C	—

Pump Motors

Electric motor pumps are becoming increasingly used in various automotive applications in order to improve mileage.

The DPAK+ Series features ultra-low ON-resistance due to the use of a nanoscale silicon process and a low-resistance Cu connector structure.

System Block Diagram

Recommended Products

Block	Package	Part number	Feature	Rel. Level
Motor control Reverse battery protection	DPAK+	TK35S04K3L	Nch, 40 V/35 A, 10.3 mΩ, T _{ch} = 175°C	AEC-Q101 qualified
		TK65S04K3L	Nch, 40 V/65 A, 4.5 mΩ, T _{ch} = 175°C	AEC-Q101 qualified
		TJ40S04M3L	Pch, -40 V/-40 A, 9.1 mΩ, T _{ch} = 175°C	AEC-Q101 qualified
		TJ60S04M3L	Pch, -40 V/-60 A, 6.3 mΩ, T _{ch} = 175°C	AEC-Q101 qualified
	SOP Advance	TPCA8085	Nch, 40 V/40 A, 5.7 mΩ, T _{ch} = 175°C	AEC-Q101 Under consideration
		TPCA8083	Nch, 40 V/60 A, 3.3 mΩ, T _{ch} = 175°C	—
		TPCA8124	Pch, -40 V/-35 A, 9.5 mΩ, T _{ch} = 175°C	AEC-Q101 Under consideration
		TPCA8122	Pch, -40 V/-60 A, 5.0 mΩ, T _{ch} = 175°C	AEC-Q101 Under consideration
	TSOP Advance	TPCC8069	Nch, 40 V/30 A, 8.1 mΩ, T _{ch} = 175°C	AEC-Q101 Under consideration
		TPCC8106	Pch, -40 V/-30 A, 12.3 mΩ, T _{ch} = 175°C	AEC-Q101 Under consideration

Heating, Ventilation and Air-Conditioning (HVAC)

HVAC systems are migrating to brushless motors to improve mileage. The power MOSFETs for HVAC applications feature ultra-low ON-resistance due to the use of a nanoscale silicon process and a low-resistance Cu connector structure, reducing the power consumption of the electronic control unit (ECU).

Additionally, the Cu connector structure provides a higher power cycling capability than aluminum (Al) wire bonding.

System Block Diagram

Recommended Products

Block	Package	Part number	Feature	Rel. Level
Motor control Reverse battery protection	DPAK+	TK65S04K3L	Nch, 40 V/65 A, 4.5 mΩ, T _{ch} = 175°C	AEC-Q101 qualified
		TK80S04K3L	Nch, 40 V/80 A, 3.1 mΩ, T _{ch} = 175°C	AEC-Q101 qualified
		TK60S06K3L	Nch, 60 V/60 A, 8.0 mΩ, T _{ch} = 175°C	AEC-Q101 qualified
		TK80S06K3L	Nch, 60 V/80 A, 5.5 mΩ, T _{ch} = 175°C	AEC-Q101 qualified

Electric parking brake (EPB), power sliding doors, precrash seat belt tensioners

Nowadays, more and more automotive applications rely on electronic control, including electric parking brakes (EPB), power sliding doors and precrash seat belt tensioners. The H-bridge circuit configuration is most commonly used to drive motors for these applications. Fabricated using the latest silicon process, the DPAK+ MOSFET Series for motor drive applications delivers low on-resistance, as well as low wiring resistance by the use of a Cu connector. These characteristics combine to help reduce the system power consumption.

System Block Diagram

Recommended Products

Block	Package	Part number	Feature	Rel. Level

Junction Box

Automotive junction boxes come in two types: those using mechanical relays and those using MOSFETs as semiconductor relays. To meet the needs of mechanical-relay drive applications, Toshiba has developed the SSM3K337R, a MOSFET in a small package (with 85% of the mounting area of the predecessor) that has active clamping circuitry for inductive loads. Toshiba also offers power MOSFETs in DPAK+ and TO-220SM(W) packages suitable for semiconductor relay applications.

System Block Diagram

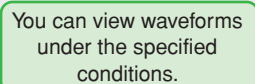

Recommended Products

Block	Package	Part number	Feature	Rel. Level
Mechanical Relay	SOT-23F	SSM3K337R	Activeclamp MOSFET, 43 V/2 A, 0.2 Ω@4.0 V	AEC-Q101 qualified
Semicon. Relay	DPAK+	TK80S04K3L	Nch, 40 V/80 A, 3.1 mΩ, T _{ch} = 175°C	AEC-Q101 qualified
	TO-220SM(W)	TK150F04K3L	Nch, 40 V/150 A, 2.1 mΩ, T _{ch} = 175°C	AEC-Q101 qualified
Power Supply	DPAK+	TK30S06K3L	Nch, 60 V/30 A, 18 mΩ, T _{ch} = 175°C	AEC-Q101 qualified

A video clip introducing the Web Simulator is available on YouTube.

- You can view performance curves in a datasheet under various conditions.

- You can simulate various power supply topologies for AC-DC and DC-DC converters.

The website of Toshiba Semiconductor & Storage Products is:

- easy to read
- easy to search
- easy to navigate around

point 2 Latest news, topics, and new product highlights

The latest news and new product highlights are available here.

point 3 Extensive product lineups

You can find the lineups and details of our products by category.

point 4 Web Simulator

This online tool allows you to simulate our MOSFETs, LDO regulators and load switch ICs under various conditions.

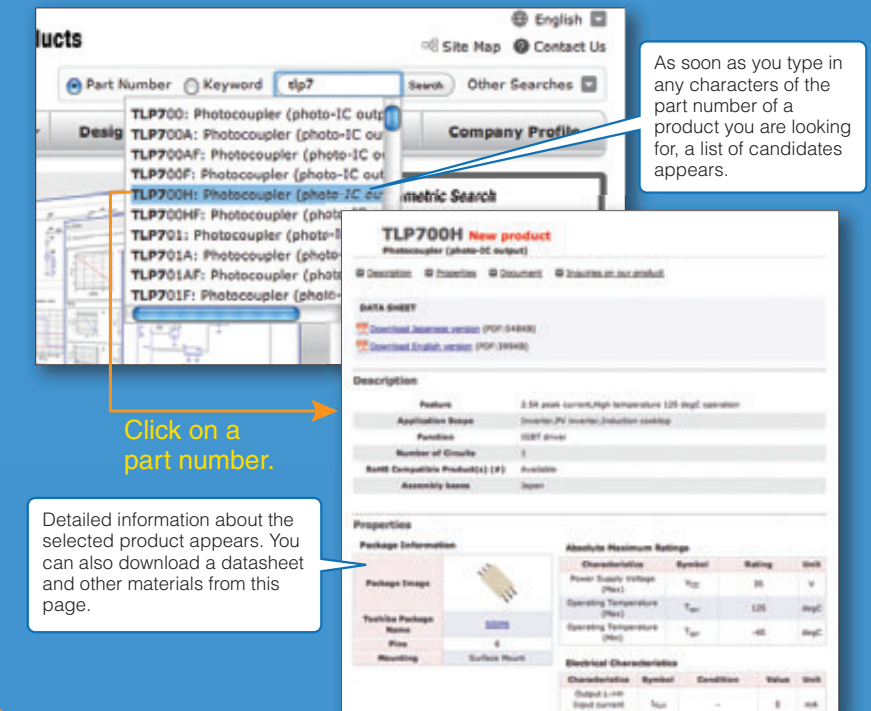

point 1 Various search features

You can find products matching your search criteria.

Part number search

You can find information about any of our products by typing in any characters of the part number.

Parametric search

You can successively narrow down a list of products by choosing a product category and electrical characteristics.

CMOS Logic ICs

By clicking on the product name, you can find the product details.

Part Number	Life cycle	Group	Function	Package	V _{CC} (V)	V _{CC} (V)	I _{CC} (mA)	I _{CC} (mA)	Number of pins	Surface mount package	Package name (Toshiba)

RESTRICTIONS ON PRODUCT USE

- ▶ Toshiba Corporation, and its subsidiaries and affiliates (collectively "TOSHIBA"), reserve the right to make changes to the information in this document, and related hardware, software and systems (collectively "Product") without notice.
- ▶ This document and any information herein may not be reproduced without prior written permission from TOSHIBA. Even with TOSHIBA's written permission, reproduction is permissible only if reproduction is without alteration/omission.
- ▶ Though TOSHIBA works continually to improve Product's quality and reliability, Product can malfunction or fail. Customers are responsible for complying with safety standards and for providing adequate designs and safeguards for their hardware, software and systems which minimize risk and avoid situations in which a malfunction or failure of Product could cause loss of human life, bodily injury or damage to property, including data loss or corruption. Before customers use the Product, create designs including the Product, or incorporate the Product into their own applications, customers must also refer to and comply with (a) the latest versions of all relevant TOSHIBA information, including without limitation, this document, the specifications, the data sheets and application notes for Product and the precautions and conditions set forth in the "TOSHIBA Semiconductor Reliability Handbook" and (b) the instructions for the application with which the Product will be used with or for. Customers are solely responsible for all aspects of their own product design or applications, including but not limited to (a) determining the appropriateness of the use of this Product in such design or applications; (b) evaluating and determining the applicability of any information contained in this document, or in charts, diagrams, programs, algorithms, sample application circuits, or any other referenced documents; and (c) validating all operating parameters for such designs and applications. **TOSHIBA ASSUMES NO LIABILITY FOR CUSTOMERS' PRODUCT DESIGN OR APPLICATIONS.**
- ▶ **PRODUCT IS NEITHER INTENDED NOR WARRANTED FOR USE IN EQUIPMENTS OR SYSTEMS THAT REQUIRE EXTRAORDINARILY HIGH LEVELS OF QUALITY AND/OR RELIABILITY, AND/OR A MALFUNCTION OR FAILURE OF WHICH MAY CAUSE LOSS OF HUMAN LIFE, BODILY INJURY, SERIOUS PROPERTY DAMAGE AND/OR SERIOUS PUBLIC IMPACT ("UNINTENDED USE").** Except for specific applications as expressly stated in this document, Unintended Use includes, without limitation, equipment used in nuclear facilities, equipment used in the aerospace industry, medical equipment, equipment used for automobiles, trains, ships and other transportation, traffic signaling equipment, equipment used to control combustions or explosions, safety devices, elevators and escalators, devices related to electric power, and equipment used in finance-related fields. **IF YOU USE PRODUCT FOR UNINTENDED USE, TOSHIBA ASSUMES NO LIABILITY FOR PRODUCT.** For details, please contact your TOSHIBA sales representative.
- ▶ Do not disassemble, analyze, reverse-engineer, alter, modify, translate or copy Product, whether in whole or in part.
- ▶ Product shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable laws or regulations.
- ▶ The information contained herein is presented only as guidance for Product use. No responsibility is assumed by TOSHIBA for any infringement of patents or any other intellectual property rights of third parties that may result from the use of Product. No license to any intellectual property right is granted by this document, whether express or implied, by estoppel or otherwise.
- ▶ **ABSENT A WRITTEN SIGNED AGREEMENT, EXCEPT AS PROVIDED IN THE RELEVANT TERMS AND CONDITIONS OF SALE FOR PRODUCT, AND TO THE MAXIMUM EXTENT ALLOWABLE BY LAW, TOSHIBA (1) ASSUMES NO LIABILITY WHATSOEVER, INCLUDING WITHOUT LIMITATION, INDIRECT, CONSEQUENTIAL, SPECIAL, OR INCIDENTAL DAMAGES OR LOSS, INCLUDING WITHOUT LIMITATION, LOSS OF PROFITS, LOSS OF OPPORTUNITIES, BUSINESS INTERRUPTION AND LOSS OF DATA, AND (2) DISCLAIMS ANY AND ALL EXPRESS OR IMPLIED WARRANTIES AND CONDITIONS RELATED TO SALE, USE OF PRODUCT, OR INFORMATION, INCLUDING WARRANTIES OR CONDITIONS OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, ACCURACY OF INFORMATION, OR NONINFRINGEMENT.**
- ▶ Do not use or otherwise make available Product or related software or technology for any military purposes, including without limitation, for the design, development, use, stockpiling or manufacturing of nuclear, chemical, or biological weapons or missile technology products (mass destruction weapons). Product and related software and technology may be controlled under the applicable export laws and regulations including, without limitation, the Japanese Foreign Exchange and Foreign Trade Law and the U.S. Export Administration Regulations. Export and re-export of Product or related software or technology are strictly prohibited except in compliance with all applicable export laws and regulations.
- ▶ Please contact your TOSHIBA sales representative for details as to environmental matters such as the RoHS compatibility of Product. Please use Product in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. **TOSHIBA ASSUMES NO LIABILITY FOR DAMAGES OR LOSSES OCCURRING AS A RESULT OF NONCOMPLIANCE WITH APPLICABLE LAWS AND REGULATIONS.**
