

Plastic Infrared Emitting Diode

OP265WPS

Features:

- T-1 (3 mm) package style
- Broad irradiance pattern
- Point source with flat lens
- Higher power output than GaAs at equivalent drive currents
- 850 nm diode

Description:

The **OP265WPS** point source model is a flat-lensed 850 nm diode with a *broad* radiation pattern that provides relatively even illumination over a large area. Its stable forward voltage (V_F) vs. temperature characteristic makes this device appropriate for applications where voltage is limited (such as battery operation), while the low rise time/fall time (t_r/t_f) makes it ideal for high-speed operation.

OP265 devices conform to the OP505 and OP535 series devices.

Please refer to Application Bulletins 208 and 210 for additional design information and reliability (degradation) data.

Applications:

- Space-limited applications
- Applications requiring coupling efficiency
- Precision optical designs
- Battery-operated or voltage-limited applications

CONTAINS POLYSULFONE

To avoid stress cracking, we suggest using ND Industries' **Vibra-Tite** for thread-locking. **Vibra-Tite** evaporates fast without causing structural failure in OPTEK'S molded plastics.

Notes:

1. RMA flux is recommended. Duration can be extended to 10 second maximum when flow soldering. A maximum of 20 grams force may be applied to the leads when soldering.
2. Derate linearly at $1.33\text{ mW}/^\circ\text{C}$ above 25°C .
3. $E_{E(\text{APT})}$ is a measurement of the average apertured radiant incidence upon a sensing area $0.081''$ (2.06 mm) in diameter, perpendicular to and centered on the mechanical axis of the lens and $0.590''$ (14.99 mm) from the measurement surface. $E_{E(\text{APT})}$ is not necessarily uniform within the measured area.
