Description

The ST6G3238BE is a dual supply low voltage CMOS Level Translator for SD/ MiniSD/ T-Flash fabricated with sub-micron silicon gate and five-layer metal wiring C^2MOS technology. Designed for use as an interface between a 3.3V bus and a 2.5V or 1.8V bus in a mixed $3.3\text{V}/1.8\text{V}$, $3.3\text{V}/2.5\text{V}$ and $2.5\text{V}/1.8\text{V}$ supply systems, it achieves high speed operation while maintaining the CMOS low power dissipation. The A port is designed to track V_{CCB} . The B port is designed to track V_{CCA} .

This device is intended for two-way asynchronous communication between data buses and the direction of data transmission is determined by CMD-dir/ DATA0-dir/ DAT123-dir inputs. The B-port interfaces with the 3V bus, the A-port with the 2.5V and 1.8V bus.

All inputs are equipped with protection circuits against static discharge, giving them $\pm 2\text{kV}$ (on A-side except CD and WP pins) and $\pm 15\text{kV}$ (on B side, CD and WP pins) ESD immunity and transient excess voltage. See the section on integrated ESD protections and resistors for more information.
