Functional Description

The CY7C1069DV33 is a high performance CMOS Static RAM organized as 2,097,152 words by 8 bits.

To write to the device, take Chip Enables ($\overline{CE}_1$ LOW and CE_2 HIGH) and Write Enable ($\overline{WE}$) input LOW. Data on the eight I/O pins (I/O_0 through I/O_7) is then written into the location specified on the address pins (A_0 through A_{20}).

To read from the device, take Chip Enables ($\overline{CE}_1$ LOW and CE_2 HIGH) and Output Enable ($\overline{OE}$) LOW while forcing the Write Enable ($\overline{WE}$) HIGH. Under these conditions, the contents of the memory location specified by the address pins will appear on the I/O pins. See Truth Table on page 10 for a complete description of Read and Write modes.

The input and output pins (I/O_0 through I/O_7) are placed in a high impedance state when the device is deselected ($\overline{CE}_1$ HIGH or CE_2 LOW), the outputs are disabled ($\overline{OE}$ HIGH), or during a write operation ($\overline{CE}_1$ LOW, CE_2 HIGH, and $\overline{WE}$ LOW).

The CY7C1069DV33 is available in a 54-pin TSOP II package with center power and ground (revolutionary) pinout, and a 48-ball very fine-pitch ball grid array (VFBGA) package.

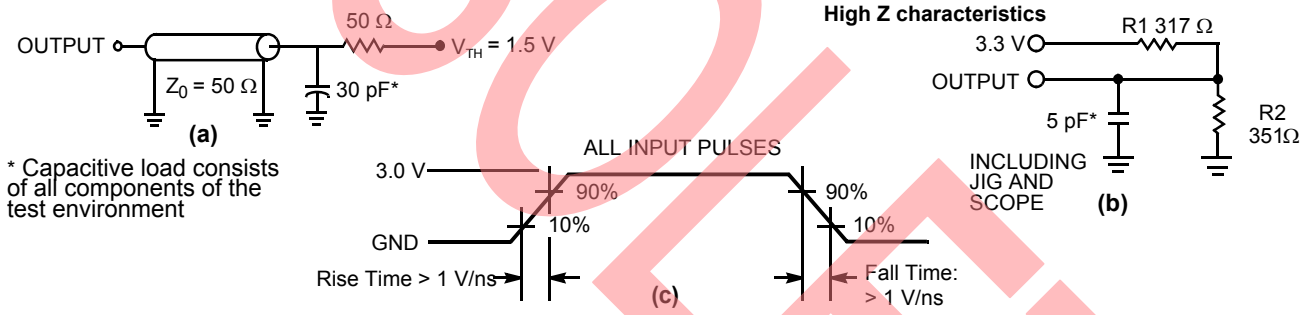
AC Test Loads and Waveforms

Figure 3. AC Test Loads and Waveforms [4]



Notes
3. Tested initially and after any design or process changes that may affect these parameters.
4. Valid SRAM operation does not occur until the power supplies have reached the minimum operating V_{DD} (3.0 V). 100 µs (t_{power}) after reaching the minimum operating V_{DD}, normal SRAM operation begins including reduction in V_{DD} to the data retention (V_{CCDR}, 2.0 V) voltage.

Notes
5. Tested initially and after any design or process changes that may affect these parameters.
6. Full device operation requires linear V_{CC} ramp from V_{DR} to $V_{CC(min)} \geq 50$ µs or stable at $V_{CC(min)} \geq 50$ µs.

t_{LZWE}	$\overline{WE}$ HIGH to low Z [9]	3	–	ns
t_{HZWE}	$\overline{WE}$ LOW to high Z [9]	–	5	ns

Notes

7. Test conditions assume signal transition time of 3 ns or less, timing reference levels of 1.5 V, and input pulse levels of 0 to 3.0 V. Test conditions for the read cycle use output loading shown in (a) of Figure 3 on page 5, unless specified otherwise.
8. t_{POWER} gives the minimum amount of time that the power supply is at typical V_{CC} values until the first memory access is performed.
9. t_{HZOE}, t_{HZCE}, t_{HZWE}, t_{LZOE}, t_{LZCE}, and t_{LZWE} are specified with a load capacitance of 5 pF as in (b) of Figure 3 on page 5. Transition is measured ±200 mV from steady state voltage.
10. These parameters are guaranteed by design and are not tested.
11. The internal write time of the memory is defined by the overlap of $\overline{WE}$, $\overline{CE}_1$ = V_{IL}, and CE_2 = V_{IH}. $\overline{CE}_1$ and $\overline{WE}$ are LOW along with CE_2 HIGH to initiate a write, and the transition of any of these signals can terminate. The input data setup and hold timing should be referenced to the edge of the signal that terminates the write.
12. The minimum write cycle time for Write Cycle No. 2 ($\overline{WE}$ Controlled, $\overline{OE}$ LOW) is the sum of t_{HZWE} and t_{SD}.

Switching Waveforms

Figure 5. Read Cycle No. 1 (Address Transition Controlled) [13, 14]

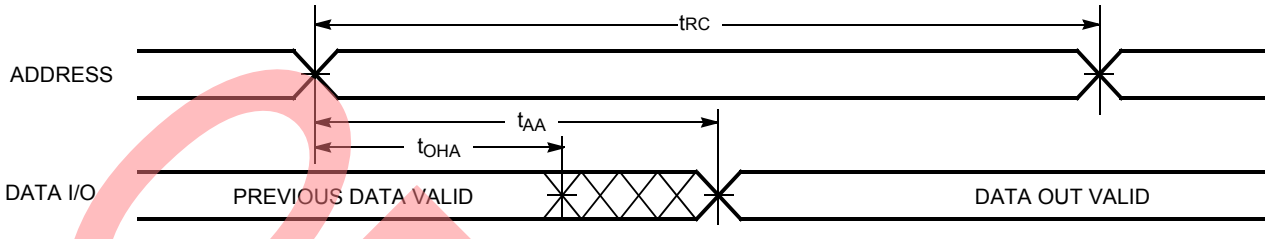

Figure 6. Read Cycle No. 2 ($\overline{OE}$ Controlled) [14, 15]

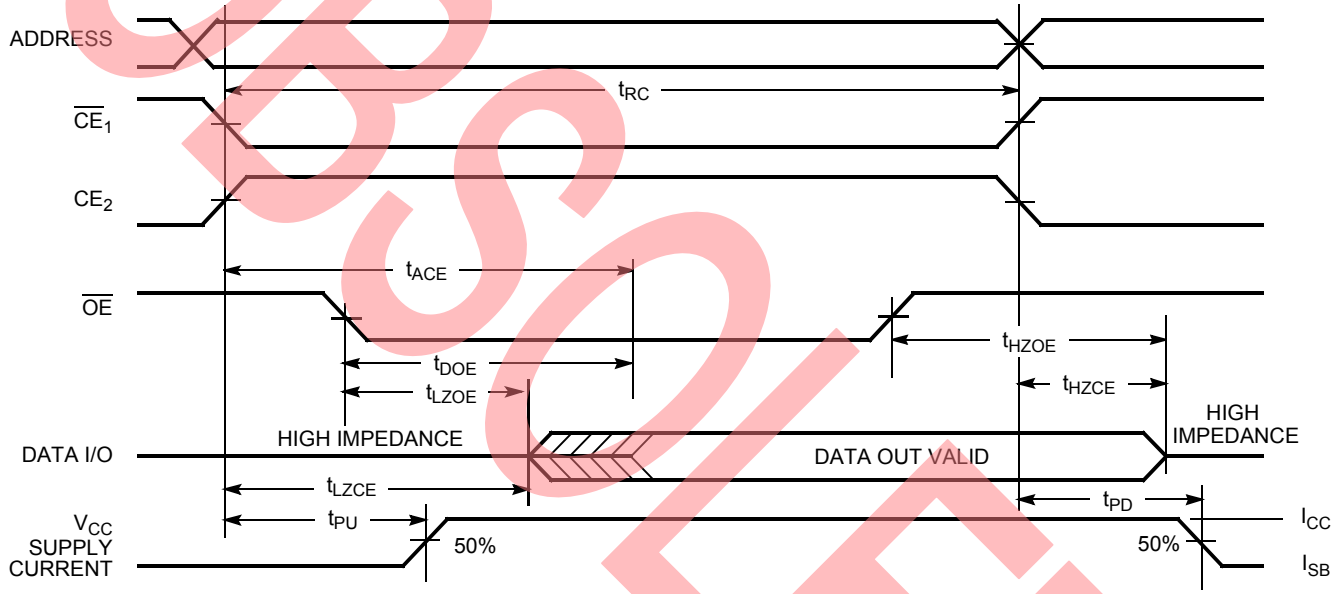

Notes
13. The device is continuously selected. $\overline{CE}_1 = V_{IL}$, and $CE_2 = V_{IH}$.
14. $\overline{WE}$ is HIGH for read cycle.
15. Address valid before or similar to $\overline{CE}_1$ transition LOW and CE_2 transition HIGH.

Switching Waveforms (continued)

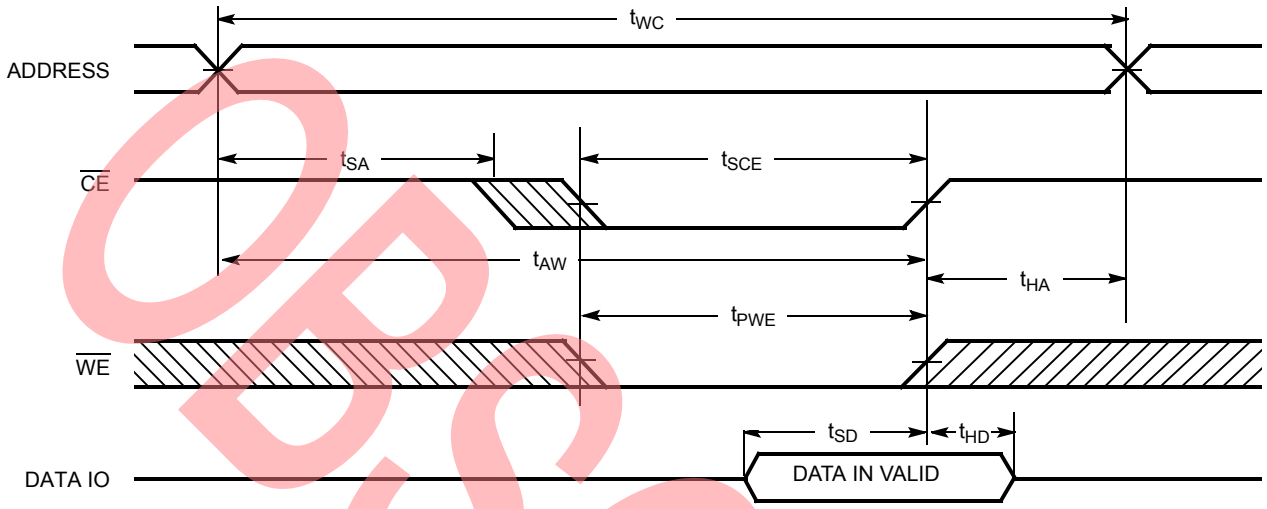

Figure 8. Write Cycle No. 2 ($\overline{WE}$ Controlled, $\overline{OE}$ LOW) [16, 17, 18, 19]

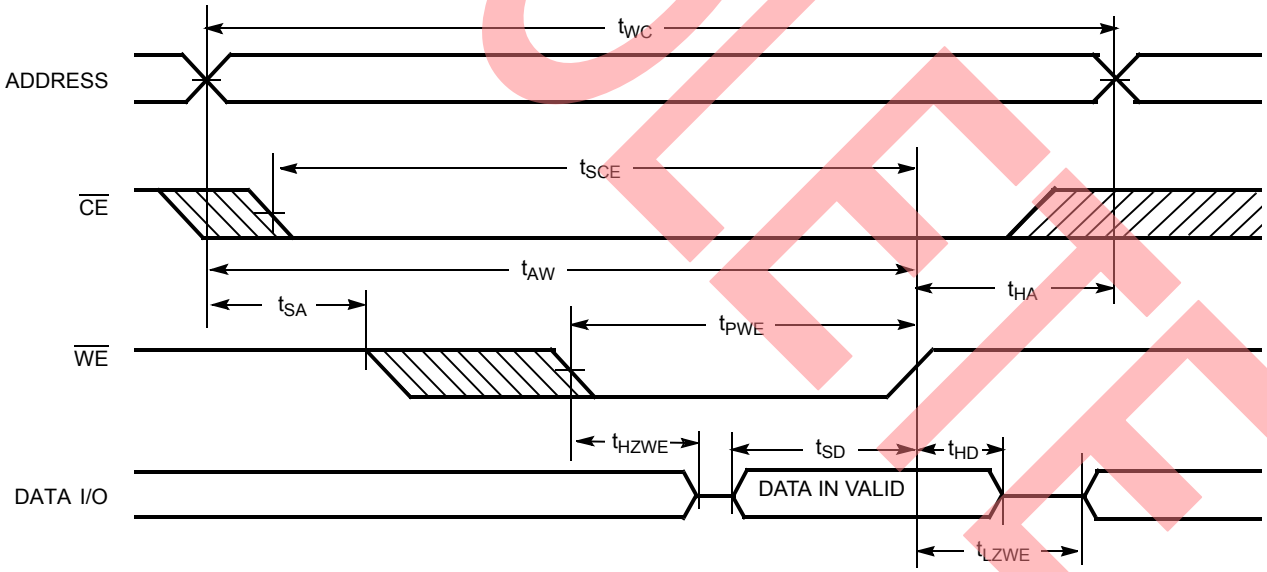

Notes
16. $\overline{CE}$ is a shorthand combination of both $\overline{CE}_1$ and CE_2 combined. It is active LOW.
17. Data I/O is high impedance if $\overline{OE} = V_{IH}$.
18. If $\overline{CE}$ goes HIGH simultaneously with $\overline{WE}$ going HIGH, the output remains in a high impedance state.
19. The minimum write cycle time is the sum of t_{HZWE} and t_{SD}.
