Pin Assignment

Note: Both GND pins should be connected to ground.

Block Diagram

Note: As long as the voltages applied to VCC, VS1, VS2, ENA1, ENA2, IN1, and IN2 are within the limits set by the absolute maximum ratings, there are no restrictions on the relationship of each voltage level in comparison with the others (regarding which is higher or lower). (ex. VCC = 3V, VS1, 2 = 2V, ENA = IN = 5V)

Truth Table

IN1,2	ENA1,2	OUT1,3	OUT2,4	Mode
L	H	H	L	Forward
H	H	L	H	Reverse
L	L	OFF	OFF	Standby
H	L	OFF	OFF	Standby

Vcont pin

As shown in the left diagram, the Vcont pin outputs the voltage of the band gap Zener $V_Z + V_F (= 1.93V)$. In normal use, this pin is left open. The drive current I_D is varied by the Vcont voltage. However, because the band gap Zener is shared, it functions as a bridge.
