

## L293x Quadruple Half-H Drivers

### 1 Features

- Wide Supply-Voltage Range: 4.5 V to 36 V
- Separate Input-Logic Supply
- Internal ESD Protection
- High-Noise-Immunity Inputs
- Output Current 1 A Per Channel (600 mA for L293D)
- Peak Output Current 2 A Per Channel (1.2 A for L293D)
- Output Clamp Diodes for Inductive Transient Suppression (L293D)

### 2 Applications

- Stepper Motor Drivers
- DC Motor Drivers
- Latching Relay Drivers

### 3 Description

The L293 and L293D devices are quadruple high-current half-H drivers. The L293 is designed to provide bidirectional drive currents of up to 1 A at voltages from 4.5 V to 36 V. The L293D is designed to provide bidirectional drive currents of up to 600-mA at voltages from 4.5 V to 36 V. Both devices are designed to drive inductive loads such as relays, solenoids, DC and bipolar stepping motors, as well as other high-current/high-voltage loads in positive-supply applications.

Each output is a complete totem-pole drive circuit, with a Darlington transistor sink and a pseudo-Darlington source. Drivers are enabled in pairs, with drivers 1 and 2 enabled by 1,2EN and drivers 3 and 4 enabled by 3,4EN.

The L293 and L293D are characterized for operation from 0°C to 70°C.

#### Device Information<sup>(1)</sup>

PART NUMBER	PACKAGE	BODY SIZE (NOM)
L293NE	PDIP (16)	19.80 mm x 6.35 mm
L293DNE	PDIP (16)	19.80 mm x 6.35 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

## 5 Pin Configuration and Functions

### Pin Functions

PIN		TYPE	DESCRIPTION
NAME	NO.		
1,2EN	1	I	Enable driver channels 1 and 2 (active high input)
<1:4>A	2, 7, 10, 15	I	Driver inputs, noninverting
<1:4>Y	3, 6, 11, 14	O	Driver outputs
3,4EN	9	I	Enable driver channels 3 and 4 (active high input)
GROUND	4, 5, 12, 13	—	Device ground and heat sink pin. Connect to printed-circuit-board ground plane with multiple solid vias
V <sub>CC1</sub>	16	—	5-V supply for internal logic translation
V <sub>CC2</sub>	8	—	Power VCC for drivers 4.5 V to 36 V

## 6 Specifications

### 6.1 Absolute Maximum Ratings

 over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

	MIN	MAX	UNIT
Supply voltage, $V_{CC1}$ <sup>(2)</sup>		36	V
Output supply voltage, $V_{CC2}$		36	V
Input voltage, $V_I$		7	V
Output voltage, $V_O$	-3	$V_{CC2} + 3$	V
Peak output current, $I_O$ (nonrepetitive, $t \leq 5$ ms): L293	-2	2	A
Peak output current, $I_O$ (nonrepetitive, $t \leq 100$ $\mu$ s): L293D	-1.2	1.2	A
Continuous output current, $I_O$ : L293	-1	1	A
Continuous output current, $I_O$ : L293D	-600	600	mA
Maximum junction temperature, $T_J$		150	$^{\circ}$ C
Storage temperature, $T_{stg}$	-65	150	$^{\circ}$ C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltage values are with respect to the network ground terminal.

### 6.2 ESD Ratings

		VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	$\pm 2000$
		Charged-device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup>	$\pm 1000$
			V

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	NOM	MAX	UNIT
Supply voltage	$V_{CC1}$	4.5		7	V
	$V_{CC2}$	$V_{CC1}$		36	
$V_{IH}$	High-level input voltage	$V_{CC1} \leq 7$ V		$V_{CC1}$	V
		$V_{CC1} \geq 7$ V	2.3	7	V
$V_{IL}$	Low-level output voltage	-0.3 <sup>(1)</sup>		1.5	V
$T_A$	Operating free-air temperature	0		70	$^{\circ}$ C

- (1) The algebraic convention, in which the least positive (most negative) designated minimum, is used in this data sheet for logic voltage levels.

### 6.4 Thermal Information

THERMAL METRIC <sup>(1)</sup>		L293, L293D	UNIT
		NE (PDIP)	
		16 PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance <sup>(2)</sup>	36.4	$^{\circ}$ C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	22.5	$^{\circ}$ C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	16.5	$^{\circ}$ C/W
$\Psi_{JT}$	Junction-to-top characterization parameter	7.1	$^{\circ}$ C/W
$\Psi_{JB}$	Junction-to-board characterization parameter	16.3	$^{\circ}$ C/W

- (1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report, [SPRA953](#).
- (2) The package thermal impedance is calculated in accordance with JESD 51-7.

### 6.5 Electrical Characteristics

over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS		MIN	TYP	MAX	UNIT
V <sub>OH</sub>	High-level output voltage	L293: I <sub>OH</sub> = -1 A		V <sub>CC2</sub> - 1.8	V <sub>CC2</sub> - 1.4		V
		L293D: I <sub>OH</sub> = -0.6 A					
V <sub>OL</sub>	Low-level output voltage	L293: I <sub>OL</sub> = 1 A			1.2	1.8	V
		L293D: I <sub>OL</sub> = 0.6 A					
V <sub>OKH</sub>	High-level output clamp voltage	L293D: I <sub>OK</sub> = -0.6 A		V <sub>CC2</sub> + 1.3			V
V <sub>OKL</sub>	Low-level output clamp voltage	L293D: I <sub>OK</sub> = 0.6 A		1.3			V
I <sub>IH</sub>	High-level input current	A	V <sub>I</sub> = 7 V	0.2		100	μA
		EN		0.2		10	
I <sub>IL</sub>	Low-level input current	A	V <sub>I</sub> = 0	-3		-10	μA
		EN		-2		-100	
I <sub>CC1</sub>	Logic supply current	I <sub>O</sub> = 0	All outputs at high level	13		22	mA
			All outputs at low level	35		60	
			All outputs at high impedance	8		24	
I <sub>CC2</sub>	Output supply current	I <sub>O</sub> = 0	All outputs at high level	14		24	mA
			All outputs at low level	2		6	
			All outputs at high impedance	2		4	

### 6.6 Switching Characteristics

over operating free-air temperature range (unless otherwise noted) V<sub>CC1</sub> = 5 V, V<sub>CC2</sub> = 24 V, T<sub>A</sub> = 25°C

PARAMETER		TEST CONDITIONS		MIN	TYP	MAX	UNIT

C<sub>L</sub> = 30 pF, See Figure 2

### 6.7 Typical Characteristics

Figure 1. Maximum Power Dissipation vs Ambient Temperature

## 7 Parameter Measurement Information

NOTES: A.  $C_L$  includes probe and jig capacitance.

B. The pulse generator has the following characteristics:  $t_r \leq 10$  ns,  $t_f \leq 10$  ns,  $t_w = 10$   $\mu$ s, PRR = 5 kHz,  $Z_O = 50$   $\Omega$ .

**Figure 2. Test Circuit and Voltage Waveforms**

## 8 Detailed Description

### 8.1 Overview

The L293 and L293D are quadruple high-current half-H drivers. These devices are designed to drive a wide array of inductive loads such as relays, solenoids, DC and bipolar stepping motors, as well as other high-current and high-voltage loads. All inputs are TTL compatible and tolerant up to 7 V.

Each output is a complete totem-pole drive circuit, with a Darlington transistor sink and a pseudo-Darlington source. Drivers are enabled in pairs, with drivers 1 and 2 enabled by 1,2EN and drivers 3 and 4 enabled by 3,4EN. When an enable input is high, the associated drivers are enabled, and their outputs are active and in phase with their inputs. When the enable input is low, those drivers are disabled, and their outputs are off and in the high-impedance state. With the proper data inputs, each pair of drivers forms a full-H (or bridge) reversible drive suitable for solenoid or motor applications.

On the L293, external high-speed output clamp diodes should be used for inductive transient suppression. On the L293D, these diodes are integrated to reduce system complexity and overall system size. A  $V_{CC1}$  terminal, separate from  $V_{CC2}$ , is provided for the logic inputs to minimize device power dissipation. The L293 and L293D are characterized for operation from 0°C to 70°C.

### 8.2 Functional Block Diagram

### 8.3 Feature Description

The L293x has TTL-compatible inputs and high voltage outputs for inductive load driving. Current outputs can get up to 2 A using the L293.

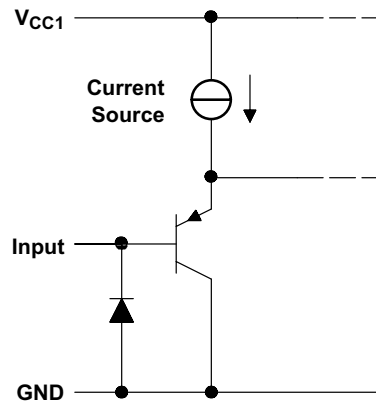

### 8.4 Device Functional Modes

Table 1 lists the functional modes of the L293x.

**Table 1. Function Table (Each Driver)<sup>(1)</sup>**

INPUTS <sup>(2)</sup>		OUTPUT (Y)
A	EN	
H	H	H
L	H	L
X	L	Z

- (1) H = high level, L = low level, X = irrelevant, Z = high impedance (off)
- (2) In the thermal shutdown mode, the output is in the high-impedance state, regardless of the input levels.

**Figure 3. Schematic of Inputs for the L293x**

**Figure 4. Schematic of Outputs for the L293**

**Figure 5. Schematic of Outputs for the L293D**

## 9 Application and Implementation

### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 9.1 Application Information

A typical application for the L293 device is driving a two-phase motor. Below is an example schematic displaying how to properly connect a two-phase motor to the L293 device.

Provide a 5-V supply to  $V_{CC1}$  and valid logic input levels to data and enable inputs.  $V_{CC2}$  must be connected to a power supply capable of supplying the needed current and voltage demand for the loads connected to the outputs.

### 9.2 Typical Application

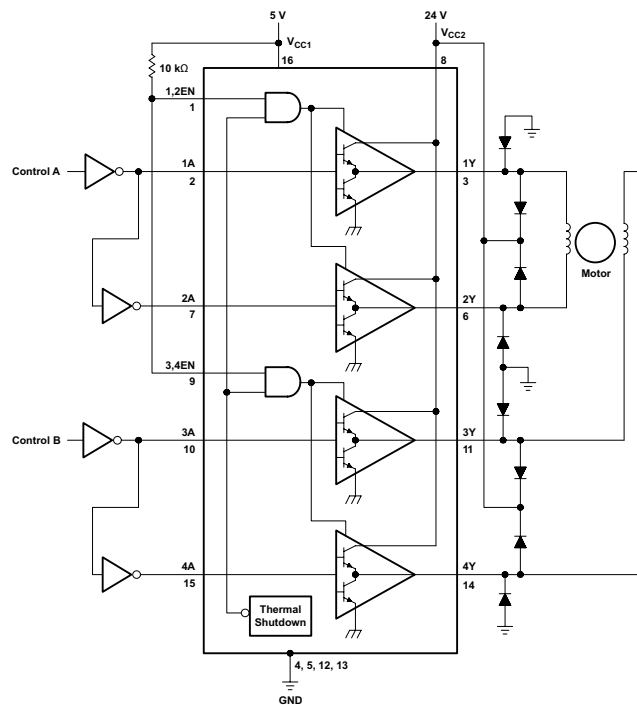

Figure 6. Two-Phase Motor Driver (L293)

#### 9.2.1 Design Requirements

The design techniques in the application above as well as the applications below should fall within the following design requirements.

1.  $V_{CC1}$  should fall within the limits described in the [Recommended Operating Conditions](#).
2.  $V_{CC2}$  should fall within the limits described in the [Recommended Operating Conditions](#).
3. The current per channel should not exceed 1 A for the L293 (600mA for the L293D).

#### 9.2.2 Detailed Design Procedure

When designing with the L293 or L293D, careful consideration should be made to ensure the device does not exceed the operating temperature of the device. Proper heatsinking will allow for operation over a larger range of current per channel. Refer to the [Power Supply Recommendations](#) as well as the [Layout Example](#).

## Typical Application (continued)

### 9.2.3 Application Curve

Refer to [Power Supply Recommendations](#) for additional information with regards to appropriate power dissipation. [Figure 7](#) describes thermal dissipation based on [Figure 14](#).

Figure 7. Maximum Power and Junction vs Thermal Resistance

## 9.3 System Examples

### 9.3.1 L293D as a Two-Phase Motor Driver

[Figure 8](#) below depicts a typical setup for using the L293D as a two-phase motor driver. Refer to the [Recommended Operating Conditions](#) when considering the appropriate input high and input low voltage levels to enable each channel of the device.

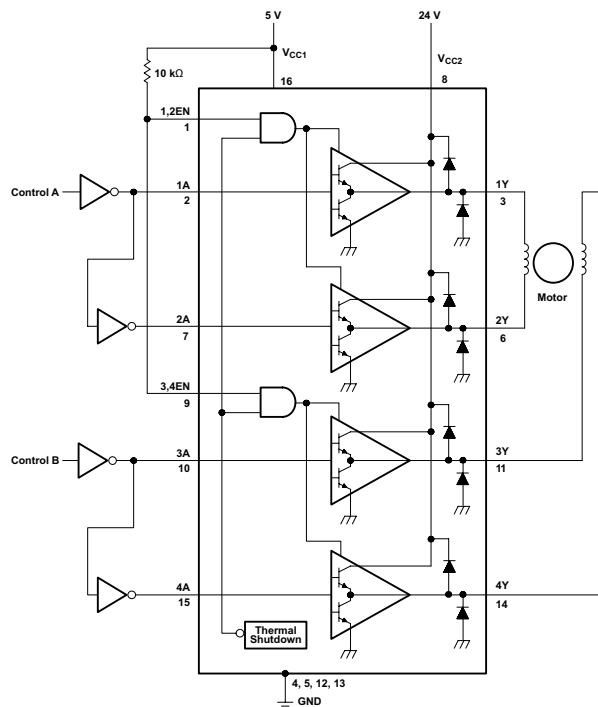

Figure 8. Two-Phase Motor Driver (L293D)

System Examples (continued)

9.3.2 DC Motor Controls

Figure 9 and Figure 10 below depict a typical setup for using the L293 device as a controller for DC motors. Note that the L293 device can be used as a simple driver for a motor to turn on and off in one direction, and can also be used to drive a motor in both directions. Refer to the function tables below to understand unidirectional vs bidirectional motor control. Refer to the *Recommended Operating Conditions* when considering the appropriate input high and input low voltage levels to enable each channel of the device.

Connections to ground and to supply voltage

Figure 9. DC Motor Controls

Table 2. Unidirectional DC Motor Control

### 9.3.3 Bipolar Stepping-Motor Control

Figure 11 below depicts a typical setup for using the L293D as a two-phase motor driver. Refer to the [Recommended Operating Conditions](#) when considering the appropriate input high and input low voltage levels to enable each channel of the device.

D1–D8 = SES5001

**Figure 11. Bipolar Stepping-Motor Control**

## 10 Power Supply Recommendations

$V_{CC1}$  is  $5\text{ V} \pm 0.5\text{ V}$  and  $V_{CC2}$  can be same supply as  $V_{CC1}$  or a higher voltage supply with peak voltage up to 36 V. Bypass capacitors of 0.1  $\mu\text{F}$  or greater should be used at  $V_{CC1}$  and  $V_{CC2}$  pins. There are no power up or power down supply sequence order requirements.

Properly heatsinking the L293 when driving high-current is critical to design. The  $R_{thj-amp}$  of the L293 can be reduced by soldering the GND pins to a suitable copper area of the printed circuit board or to an external heat sink.

Figure 14 shows the maximum package power  $PTOT$  and the  $\theta_{JA}$  as a function of the side of two equal square copper areas having a thickness of 35  $\mu\text{m}$  (see Figure 14). In addition, an external heat sink can be used (see Figure 12).

During soldering, the pin temperature must not exceed 260°C, and the soldering time must not exceed 12 seconds.

The external heatsink or printed circuit copper area must be connected to electrical ground.

**Figure 12. External Heat Sink Mounting Example ( $\theta_{JA} = 25^\circ\text{C/W}$ )**

## 11 Layout

### 11.1 Layout Guidelines

Place the device near the load to keep output traces short to reduce EMI. Use solid vias to transfer heat from ground pins to ground plane of the printed-circuit-board.

### 11.2 Layout Example

**Figure 13. Layout Diagram**

**Figure 14. Example of Printed-Circuit-Board Copper Area (Used as Heat Sink)**

## 12 Device and Documentation Support

### 12.1 Related Links

The table below lists quick access links. Categories include technical documents, support and community resources, tools and software, and quick access to sample or buy.

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBsolete:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "-" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.
