\*6 Specification is changed at option, refer to Instruction Manual  
 \*7 Applicable when AUX and remote control (optional) is added.  
 \* To meet the specifications. Do not operate over-loaded condition.  
 \* Sound noise may be generated by power supply in case of pulse load.  
 \* Parallel operation is not possible.  
 \* Forced air cooling is required to output up to MAX OUTPUT WATTAGE.  
 \* Bottom layer P.C.B has electric potential which is required isolation from FG by clearance or creepage as the safety design issue.

\*1 This is the value that measured on measuring board with capacitor of 22 μF at 150mm from output terminal.

Measured by 20MHz oscilloscope or Ripple-Noise meter (Equivalent to KEISOKU-GIKEN: RM103).

\*2 Drift is the change in DC output for an eight hour period after a half-hour warm-up at 25°C, with the input voltage held constant at the rated input/output.

\*3 Derating is required.

\*4 Please contact us about dynamic load and input response.

\*5 Please contact us about another class.

\*6 Specification is changed at option, refer to Instruction Manual.

\*7 When output current more than rated, output will shut down after 5 seconds or more. Recycle input after 3 minutes to reset the protection.

\* To meet the specifications. Do not operate over-loaded condition.

\* Sound noise may be generated by power supply in case of pulse load.
