

SNx4AHC16244 16-Bit Buffers/Drivers With 3-State Outputs

1 Features

- Members of the Texas Instruments *Widebus™* Family
- *EPIC™* (Enhanced-Performance Implanted CMOS) Process
- Operating Range 2-V to 5.5-V V_{CC}
- Distributed V_{CC} and GND Pins Minimize High-Speed Switching Noise
- Flow-Through Architecture Optimizes PCB Layout
- Latch-Up Performance Exceeds 250 mA Per JESD 17
- ESD Protection Exceeds 2000 V Per MIL-STD-883, Method 3015; Exceeds 200 V Using Machine Model (C = 200 pF, R = 0)

2 Applications

- Motor Drives
- Wireless Infrastructures
- Health and Fitness Wearables
- Telecom Infrastructures
- Electronic Points of Sale

3 Description

The SNx4AHC16244 devices are 16-bit buffers and line drivers designed specifically to improve the performance and density of 3-state memory address drivers, clock drivers, and bus-oriented receivers and transmitters.

Device Information⁽¹⁾

| PART NUMBER | PACKAGE | BODY SIZE (NOM) |
|--------------|------------|--------------------|
| SNx4AHC16244 | SSOP (48) | 15.80 mm x 7.50 mm |
| | TSSOP (48) | 12.50 mm 6.10 mm |
| | TVSOP (48) | 9.70 mm 4.40 mm |

(1) For all available packages, see the orderable addendum at the end of the data sheet.

5 Revision History

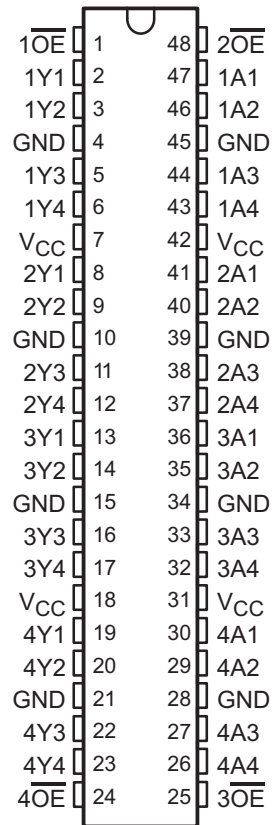

Changes from Revision G (January 2000) to Revision H

Page

| | |
|--|----|
| • Updated document to new TI data sheet format | 1 |
| • Deleted Ordering Information table | 1 |
| • Added Applications | 1 |
| • Added Pin Functions table | 3 |
| • Added Pin Functions table | 4 |
| • Added Handling Ratings table | 5 |
| • Changed MAX operating temperature to 125°C in Recommended Operating Conditions table | 5 |
| • Added Thermal Information table | 6 |
| • Added –40°C to 125°C range for SN74AHC16244 in Electrical Characteristics table | 6 |
| • Added $T_A = -40^\circ\text{C}$ to 125°C for SN74AHC16244 in both Switching Characteristics tables | 7 |
| • Added Typical Characteristics | 8 |
| • Added Detailed Description section | 10 |
| • Added Application and Implementation section | 12 |
| • Added Power Supply Recommendations and Layout sections | 13 |

7 Specifications

7.1 Absolute Maximum Ratings⁽¹⁾

over operating free-air temperature range (unless otherwise noted)

| | | MIN | MAX | UNIT |
|--|-------------------------------------|-----------------------------|----------------|------|
| V_{CC} | Supply voltage range | -0.5 | 7 | V |
| V_I | Input voltage range ⁽²⁾ | -0.5 | 7 | V |
| V_O | Output voltage range ⁽²⁾ | -0.5 | $V_{CC} + 0.5$ | V |
| I_{IK} | Input clamp current | $V_I < 0$ | -20 | mA |
| I_{OK} | Output clamp current | $V_O < 0$ or $V_O > V_{CC}$ | ±20 | mA |
| I_O | Continuous output current | $V_O = 0$ to V_{CC} | ±25 | mA |
| Continuous current through V_{CC} or GND | | | ±75 | mA |

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) The input and output voltage ratings may be exceeded if the input and output current ratings are observed.

7.2 Handling Ratings

| | | MIN | MAX | UNIT |
|-------------|---------------------------|---|-----|------|
| T_{stg} | Storage temperature range | -65 | 150 | °C |
| $V_{(ESD)}$ | Electrostatic discharge | Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins ⁽¹⁾ | | V |

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

7.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

| | | SN54AHC16244 ⁽²⁾ | | SN74AHC16244 | | UNIT |
|---------------------|------------------------------------|-----------------------------|----------|--------------|----------|------|
| | | MIN | MAX | MIN | MAX | |
| V_{CC} | Supply voltage | 2 | 5.5 | 2 | 5.5 | V |
| V_{IH} | High-level input voltage | $V_{CC} = 2$ V | 1.5 | 1.5 | | V |
| | | $V_{CC} = 3$ V | 2.1 | 2.1 | | |
| | | $V_{CC} = 5.5$ V | 3.85 | 3.85 | | |
| V_{IL} | Low-level input voltage | $V_{CC} = 2$ V | | 0.5 | 0.5 | V |
| | | $V_{CC} = 3$ V | | 0.9 | 0.9 | |
| | | $V_{CC} = 5.5$ V | | 1.65 | 1.65 | |
| V_I | Input voltage | 0 | 5.5 | 0 | 5.5 | V |
| V_O | Output voltage | 0 | V_{CC} | 0 | V_{CC} | V |
| I_{OH} | High-level output current | $V_{CC} = 2$ V | | -50 | -50 | µA |
| | | $V_{CC} = 3.3$ V ± 0.3 V | | -4 | -4 | mA |
| | | $V_{CC} = 5$ V ± 0.5 V | | -8 | -8 | |
| I_{OL} | Low-level output current | $V_{CC} = 2$ V | | 50 | 50 | µA |
| | | $V_{CC} = 3.3$ V ± 0.3 V | | 4 | 4 | mA |
| | | $V_{CC} = 5$ V ± 0.5 V | | 8 | 8 | |
| $\Delta t/\Delta v$ | Input transition rise or fall rate | $V_{CC} = 3.3$ V ± 0.3 V | | 100 | 100 | ns/V |
| | | $V_{CC} = 5$ V ± 0.5 V | | 20 | 20 | |
| T_A | Operating free-air temperature | -55 | 125 | -40 | 125 | °C |

- (1) All unused inputs of the device must be held at V_{CC} or GND to ensure proper device operation. Refer to the TI application report, *Implications of Slow or Floating CMOS Inputs (SCBA004)*.
- (2) Product Preview

7.4 Thermal Information

| THERMAL METRIC ⁽¹⁾ | | SN74AHC16244 | | | UNIT |
|-------------------------------|--|--------------|---------|---------|------|
| | | DGV | DL | DGG | |
| | | 48 PINS | 48 PINS | 48 PINS | |
| R _{θJA} | Junction-to-ambient thermal resistance | 83.5 | 64.6 | 72.5 | °C/W |
| R _{θJC(top)} | Junction-to-case (top) thermal resistance | 35.7 | 34.5 | 26.8 | |
| R _{θJB} | Junction-to-board thermal resistance | 46.6 | 36.4 | 39.4 | |
| ψ _{JT} | Junction-to-top characterization parameter | 4.3 | 11.1 | 2.6 | |
| ψ _{JB} | Junction-to-board characterization parameter | 46.0 | 36.1 | 39.1 | |

(1) For more information about traditional and new thermal metrics, see the *IC Package Thermal Metrics* application report ([SPRA953](#)).

VOLTAGE WAVEFORMS
ENABLE AND DISABLE TIMES
LOW- AND HIGH-LEVEL ENABLING

- NOTES: A. C_L includes probe and jig capacitance.
 B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
 C. All input pulses are supplied by generators having the following characteristics: $PRR \leq 1\text{ MHz}$, $Z_O = 50\ \Omega$, $t_r \leq 3\text{ ns}$, $t_f \leq 3\text{ ns}$.
 D. The outputs are measured one at a time with one input transition per measurement.

Figure 3. Load Circuit and Voltage Waveforms

9 Detailed Description

9.1 Overview

The SNx4AHC16244 devices are 16-bit buffers and line drivers designed specifically to improve the performance and density of 3-state memory address drivers, clock drivers, and bus-oriented receivers and transmitters.

These devices can be used as four 4-bit buffers, two 8-bit buffers, or one 16-bit buffer. They provide true outputs and symmetrical active-low output-enable (\overline{OE}) inputs.

To ensure the high-impedance state during power up or power down, \overline{OE} should be tied to V_{CC} through a pull-up resistor; the minimum value of the resistor is determined by the current-sinking capability of the driver. The SN54AHC16244 is characterized for operation over the full military temperature range of -55°C to 125°C . The SN74AHC16244 is characterized for operation from -40°C to 85°C .

9.2 Functional Block Diagram

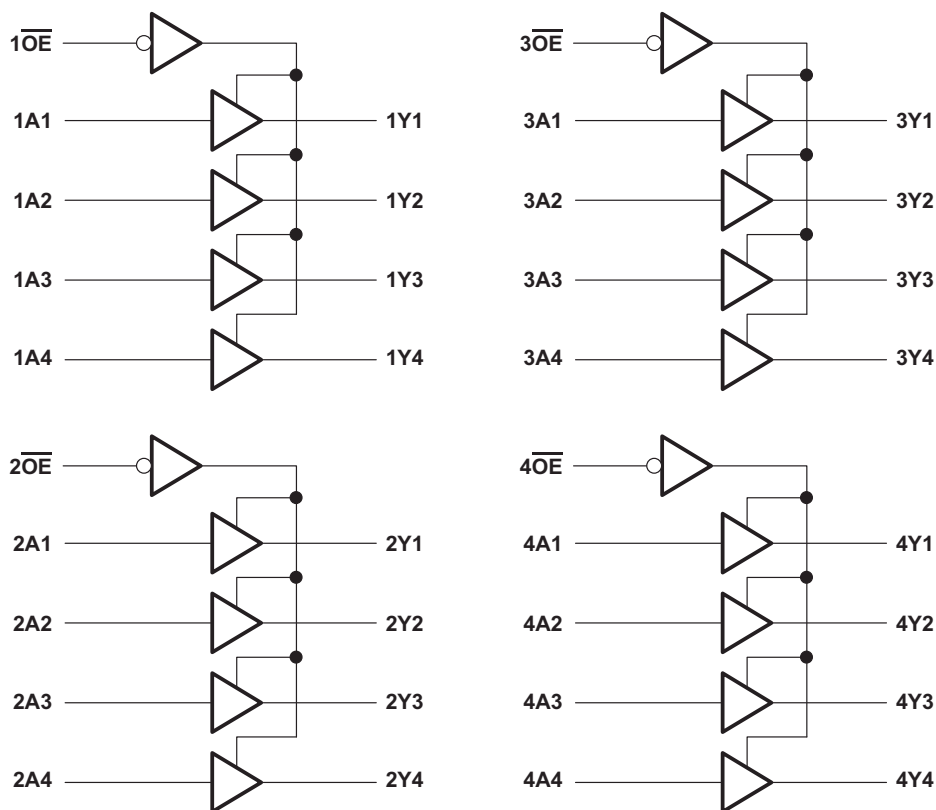

Figure 4. Logic Diagram (Positive Logic)

Functional Block Diagram (continued)

This symbol is in accordance with ANSI/IEEE Std 91-1984 and IEC Publication 617-12.

Figure 5. Logic Symbol

9.3 Feature Description

- Wide operating voltage range
 - Operates from 2 V to 5.5 V
- Allows down voltage translation
 - Inputs accept voltages up to 5.5 V
- Slows edges rates, minimizing output ringing

9.4 Device Functional Modes

| H | X | High-Z |

10 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

10.1 Application Information

The SN74AHC16244 is a low-drive CMOS device that can be used for a multitude of applications where output ringing is a concern. The low drive and slow edge rates will minimize overshoot and undershoot on the outputs. The inputs are tolerant to 5.5 V at any valid V_{CC} . This feature makes it ideal for translating down to the V_{CC} level.

Figure 6 shows the reduction in ringing compared to higher-drive parts, such as AC.

10.2 Typical Application

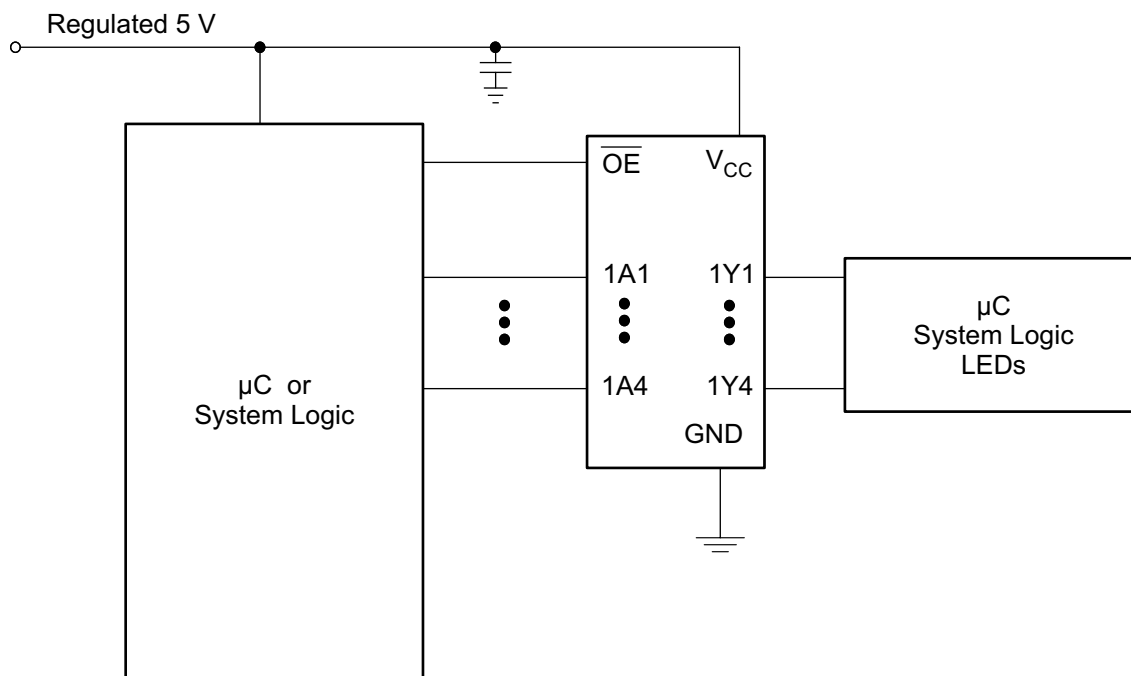

Figure 6. Application Diagram

10.2.1 Design Requirements

This device uses CMOS technology and has balanced output drive. Care should be taken to avoid bus contention because it can drive currents that would exceed maximum limits. The high drive will also create fast edges into light loads, so routing and load conditions should be considered to prevent ringing.

10.2.2 Detailed Design Procedure

- Recommended input conditions:
 - For rise time and fall time specifications, see ($\Delta t/\Delta V$) in the [Recommended Operating Conditions](#) table.
 - For specified high and low levels, see (V_{IH} and V_{IL}) in the [Recommended Operating Conditions](#) table.
 - Inputs are overvoltage tolerant allowing them to go as high as 5.5 V at any valid V_{CC} .
- Recommend output conditions:
 - Load currents should not exceed 25 mA per output and 75 mA total for the part.
 - Outputs should not be pulled above V_{CC} .

Typical Application (continued)

10.2.3 Application Curves

11 Power Supply Recommendations

The power supply can be any voltage between the Min and Max supply voltage rating located in the [Recommended Operating Conditions](#).

Each V_{CC} terminal should have a good bypass capacitor to prevent power disturbance. For devices with a single supply, a 0.1 μF capacitor is recommended. If there are multiple V_{CC} terminals then 0.01 μF or 0.022 μF capacitors are recommended for each power terminal. It is acceptable to parallel multiple bypass capacitors to reject different frequencies of noise. 0.1 μF and 1.0 μF capacitors are commonly used in parallel. The bypass capacitor should be installed as close to the power terminal as possible for the best results.

12 Layout

12.1 Layout Guidelines

When using multiple bit logic devices, inputs should not float. In many cases, functions or parts of functions of digital logic devices are unused. Some examples are when only two inputs of a triple-input AND gate are used, or only 3 of the 4-buffer gates are used. Such input pins should not be left unconnected because the undefined voltages at the outside connections result in undefined operational states. Specified in [Figure 8](#) are rules that must be observed under all circumstances. All unused inputs of digital logic devices must be connected to a high or low bias to prevent them from floating. The logic level that should be applied to any particular unused input depends on the function of the device. Generally they will be tied to GND or V_{CC} , whichever makes more sense or is more convenient. It is generally acceptable to float outputs unless the part is a transceiver.

12.2 Layout Example

13 Device and Documentation Support

13.1 Related Links

The table below lists quick access links. Categories include technical documents, support and community resources, tools and software, and quick access to sample or buy.

13.2 Trademarks

Widebus is a trademark of Texas Instruments. All other trademarks are the property of their respective owners.

13.3 Electrostatic Discharge Caution

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

13.4 Glossary

[SLYZ022](#) — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

14 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

PACKAGING INFORMATION

| Orderable Device | Status (1) | Package Type | Package Drawing | Pins | Package Qty | Eco Plan (2) | Lead/Ball Finish (6) | MSL Peak Temp (3) | Op Temp (°C) | Device Marking (4/5) | Samples |
|-------------------|---------------|--------------|-----------------|------|-------------|-------------------------|-------------------------|----------------------|--------------|-------------------------|-------------------------|
| 74AHC16244DGGRG4 | ACTIVE | TSSOP | DGG | 48 | 2000 | Green (RoHS & no Sb/Br) | NIPDAU | Level-1-260C-UNLIM | -40 to 125 | AHC16244 | Samples |

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBsolete: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

⁽⁶⁾ Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer:The information provided on this page represents TI's knowledge and belief as of the date that it is provided.
