

Products Available From

**Solid State Relays and I/O Modules**  
Catalog 1

**Automation Controls**  
Catalog 2

**Switches and Sensors**  
Catalog 3

**Motors and Fans**  
Catalog 4

**Pneumatics**  
Catalog 5

Products and specifications subject to change without notice.

Order/Technical Support – Tel: (800) 677-5311 / FAX: (800) 677-3865 / [www.crouzet-usa.com](http://www.crouzet-usa.com)

**Snap Action Switches:**

	83132 / 83133 / 83134 Subminiature Double Break Switches . . . . .	3/2
	83170 Subminiature Switches . . . . .	3/6
	83180 Sealed Subminiature Switches . . . . .	3/10
	83161 Miniature Switches . . . . .	3/14
	83160 Miniature Positive Break Switches . . . . .	3/18
	83137 Miniature Side Rotary Switches . . . . .	3/19
	83106 / 83109 / 83112 / 83154 Double Break Switches . . . . .	3/20
	83139 Sealed Double Break Switches . . . . .	3/24
	83169 Sealed Miniature Switches . . . . .	3/28
	83123 Sealed Flat-Pack Switches . . . . .	3/31
	81290 Low Force Position Detectors . . . . .	3/32

**Industrial Limit Switches:**

	83852 / 83853 Miniature Industrial Limit Switches, Positive Opening . . . . .	3/34
	83862 Industrial Limit Switches, Positive Opening . . . . .	3/36
	83870 Miniature Pre-Cabled Limit Switches, Positive Opening . . . . .	3/40
	83880 Pre-Cabled Limit Switches, Positive Opening . . . . .	3/42
	83800 Miniature Limit Switches . . . . .	3/44
	83731 / 83732 / 83733 Automotive Limit Switches . . . . .	3/46
	83589 Automotive Limit Switches . . . . .	3/47
	83581 Sealed Limit Switches, Telescopic-Actuator . . . . .	3/48
	83523 / 83528 Door Interlock Switches . . . . .	3/50
	83856 / 83857 Manual Reset Positive Opening Miniature Limit Switches . . . . .	3/52
	83841 Waterproof Limit Switch . . . . .	3/55
	83863 / 83864 Cable Pull Limit Switches . . . . .	3/56

**Safety (Security) Limit Switches:**

	838930 / 838931 Miniature Plastic Key Lock Limit Switches . . . . .	3/58
	838932 Solenoid Operated Plastic Key Lock Limit Switches . . . . .	3/60
	838940 Industrial Metal Key Lock Limit Switches . . . . .	3/62

Products and specifications subject to change without notice.

Order/Technical Support – Tel: (800) 677-5311 / FAX: (800) 677-3865 / [www.crouzet-usa.com](http://www.crouzet-usa.com)

**Safety (Security) Limit Switches:**

	838941 Solenoid Operated Metal Key Lock Limit Switches . . . . .	3/64
	83893 Hinged Limit Switches . . . . .	3/66
	838942 Cable Pull Limit Switches . . . . .	3/68
	838950 / 838951 Foot Switches . . . . .	3/70
	79697 E-Stop Switches . . . . .	3/72
	85100 Two-Hand Control Switch . . . . .	3/73

**Proximity Sensors:**

	Analog Inductive Proximity Detectors . . . . .	3/77
	Ø4, M5, Ø6, M8 Inductive Proximity Detectors Cable Output-3 Wire DC Series-Stainless Steel . . . . .	3/78
	Ø4, M5 M8 Inductive Proximity Detectors Connector Output-3 Wire DC Series-Stainless Steel . . . . .	3/78
	M12 Inductive Proximity Detectors Cable Output-3 Wire DC Series-Stainless Steel . . . . .	3/80
	M12 Inductive Proximity Detectors Cable Output-2 Wire AC Series-Stainless Steel . . . . .	3/80
	M12 Inductive Proximity Detectors Connector Output-3 Wire DC Series-Stainless Steel . . . . .	3/81
	M12 Inductive Proximity Detectors Connectors Output-2 Wire AC Series-Stainless Steel . . . . .	3/81
	M12 Inductive Proximity Detectors Cable Output-3 Wire DC Series-Plastic . . . . .	3/83
	M12 Inductive Proximity Detectors Connector Output-3 Wire DC Series-Plastic . . . . .	3/83
	M18 Inductive Proximity Detectors Cable Output-3 Wire DC Series-Stainless Steel . . . . .	3/84
	M18 Inductive Proximity Detectors Cable Output-2 Wire AC Series-Stainless Steel . . . . .	3/84
	M18 Inductive Proximity Detectors Connector Output-3 Wire DC Series-Stainless Steel . . . . .	3/84
	M18 Inductive Proximity Detectors Connector Output-2 Wire AC Series-Stainless Steel . . . . .	3/84
	M18 Inductive Proximity Detectors Cable Output-3 Wire DC Series-Plastic . . . . .	3/86
	M18 Inductive Proximity Detectors Cable Output-2 Wire AC Series-Plastic . . . . .	3/86

Products and specifications subject to change without notice.

Order/Technical Support – Tel: (800) 677-5311 / FAX: (800) 677-3865 / [www.crouzet-usa.com](http://www.crouzet-usa.com)

**Proximity Sensors:**

	M18 Inductive Proximity Detectors Connector Output-3 Wire DC Series-Plastic .....	3/87
	M30 Inductive Proximity Detectors Cable Output-3 Wire DC Series-Stainless Steel .....	3/88
	M30 Inductive Proximity Detectors Cable Output-2 Wire AC Series-Stainless Steel .....	3/88
	M30 Inductive Proximity Detectors Connector Output-3 Wire DC Series-Stainless Steel .....	3/89
	M30 Inductive Proximity Detectors Connector Output-2 Wire AC Series-Stainless Steel .....	3/89
	M30 Inductive Proximity Detectors Cable Output-3 Wire DC Series-Plastic .....	3/90
	M30 Inductive Proximity Detectors Cable Output-2 Wire AC Series-Plastic .....	3/90
	M30 Inductive Proximity Detectors Connector Output-3 Wire DC Series-Plastic .....	3/91
	Inductive Proximity Detector-Flat Pack 55x35 mm .....	3/92
	Inductive Proximity Detector 40x40 mm .....	3/93
	M8 Inductive Proximity Detectors Cable Output-2 Wire DC NAMUR Series-Stainless Steel .....	3/94
	M18 Inductive Proximity Detectors Cable Output-2 Wire DC NAMUR Series-Stainless Steel .....	3/94
	M18 Inductive Proximity Detectors Connector Output-2 Wire DC NAMUR Series-Stainless Steel .....	3/94
	M12 Inductive Proximity Detectors Cable Output-2 Wire DC NAMUR Series-Stainless Steel .....	3/95
	M12 Inductive Proximity Detectors Connector Output-2 Wire DC NAMUR Series-Stainless Steel .....	3/95
	M30 Inductive Proximity Detectors Cable Output-2 Wire DC NAMUR Series-Stainless Steel .....	3/95
	M30 Inductive Proximity Detectors-Connector Output 2 Wire DC NAMUR Series-Stainless Steel .....	3/95
	Inductive Proximity Detectors for Severe Environments .....	3/96
	M18 Capacitive Proximity Detectors Cable Output-3 Wire DC Series-Plastic .....	3/97
	M18 Capacitive Proximity Detectors Cable Output-2 Wire AC Series-Plastic .....	3/97

Products and specifications subject to change without notice.

Order/Technical Support – Tel: (800) 677-5311 / FAX: (800) 677-3865 / [www.crouzet-usa.com](http://www.crouzet-usa.com)

**Proximity Sensors:**

	M30 Capacitive Proximity Detectors Cable Output-2 Wire AC Series-Plastic . . . . .	3/97
	Capacitive Proximity Detector-Flat Pack 55x35 mm . . . . .	3/98
	M30 Programmable Capacitive Proximity Detectors Cable Output-4 Wire DC Series-Plastic . . . . .	3/99
	M30 Programmable Capacitive Proximity Detectors Cable Output-2 Wire AC Series-Plastic . . . . .	3/99
	M8 Connectors . . . . .	3/100
	M12 Connectors . . . . .	3/101
	Mounting Flanges . . . . .	3/102

**Switches and Sensors Technical References:**

	Snap Action Switches-Technical Guide . . . . .	3/104
	Limit Switches-Technical Guide . . . . .	3/111

# Snap Action Switches

Products and specifications subject to change without notice.

Order/Technical Support – Tel: (800) 677-5311 / FAX: (800) 677-3865 / [www.crouzet-usa.com](http://www.crouzet-usa.com)

## General specifications

### Layout

- The NO and NC circuits must both be of the same polarity.

### Components

#### Material

- Case : glass filled polyamide
- Contacts : silver
- Terminals: copper-nickel

#### Actuator

- Plain : stainless steel
- roller: nylon

**Accessories** : stainless steel

### Operating curve

**Approvals** UL (E42016), CSA (LR - 20918) for others, please consult us.

## Types

### Features

### Electrical characteristics

Current rating at 125-250 V	Nominal	A
	Thermal	A

### Mechanical characteristics

Operating force - max.	N (oz)
Release force min.	N (oz)
Overtravel max. - force	N (oz)
Maximum rest position	mm (in)
Tripping point	mm (in)
Movement differential	mm (in)
Overtravel - min.	mm (in)
Operating temperature	°C (°F)
Mechanical life	Operations
Contact gap	mm (in)
Weight	g (oz)

### Contact Type

C (Form C) SPDT-DB

### Connections

- 83 132 : solder connection -1- only
- 83 133 : solder connection -1- only
- 83 134 : printed circuit board -2- only

## Actuators and mounting positions-Factory Mounted Only

### Part numbers for standard actuators

Actuators-Length mm (in)

Tripping point	mm (in)
Operating force max.	N (oz)
Release force min.	N (oz)
Pre-travel - max.	mm (in)
Movement differential	mm (in)
Total travel max.	mm (in)

### Part numbers for standard actuators

Actuators-Length mm (in)

Tripping point	mm (in)
Operating force - max.	N (oz)
Release force - min.	N (oz)
Pre-travel - max.	mm (in)
Movement differential	mm (in)
Total travel max.	mm (in)

## Other information

Also available: 1) Bi-stable operation  
2) NC or NO contacts  
3) Custom Actuators  
Please consult us for other actuators.

## General specifications

### Layout

### Components

#### Material

- Case : polyester UL 94 VO
- Button : glass-filled polyamide
- Contacts : AgNi,  
gold-plated AgNi (dual-current)
- Terminals : copper-nickel

#### Actuators

- flat : stainless steel
- roller : stainless steel with polyamide roller

Approvals: NF - UL - cUL

### Operating curve

For type 83 170 0

For type 83 170 4

For type 83 170 9

Model 83 170 9 is designed to operate equally well on dual-current (1 mA 4 V minimum) or medium-current (5 A maximum) circuits. However, a given product should only be used to switch one type of circuit during its working life.

## Types

## General specifications

### Layout

### Components

#### Material

- Case : glass-filled polyamide (self-extinguishing version to UL 94 VO and IEC 695-2-1 850° C - available on request)
- Button : polyamide
- Contacts : nickel silver or gold alloy (dual-current)

#### Actuators

- flat : stainless steel
- roller : stainless steel, glass-filled polyamide roller
- other types of polyamide

Approvals: NF - UL/cUL

### Operating curve

For type 83 161 1 3

For type 83 161 5 - 5 SP 4136

For type 83 161 8

For type 83 161 9 SP 4136

For types 83 161 8 - 9 SP 4136 dual-current

Models 83 161 8 and 83 161 9 SP 4136 are designed to operate equally well on dual-current (1 mA 4 V minimum) or medium-current (5 A maximum) circuits. However, a given product should only be used to switch one type of circuit during its working life.

## Types

Part numbers for standard products with connections of type

2

# Miniature Positive Break Switches Series 83 160 DIN 41635 A

## General specifications

### Layout

The contact conforms to NFC 63 143 and IEC 947.5.1

\*The SPDT version conforms to standard IEC 947.5.1 if only the normally closed contact is used.

The switch operating principle forces the contacts open even in the event of welding (positive break operation).

### Components

#### Material

- Case : glass-filled polyamide
- Cover : transparent polycarbonate
- Contacts : nickel silver
- Positive rocker : high temperature thermoplastic
- Actuators** : stainless steel
- polyamide roller

### Electrical characteristics

#### Short-circuit test

- (from IEC 947-5-1 § 8.34)
- Current peak 1000 A at 250 V ~ 0.5 <math>\cos \varphi < 0.7</math>
- Short-circuit protection (SCPD) : fuse 10 A gG (IEC 60) (1.2/50  $\mu$ s) : 2500 V

#### Electrical life

- Max. operations : 20 cycles/min
- Resistive load at 250 V ~ 16 A :  $10^5$  cycles
- Inductive load (IEC 947.5.1) : AC 15 : 250 V ~ 6A :  $0.3 \times 10^5$  operations
- DC 13 : 24 V ~ 20 W L/R = 40 ms :  $3 \times 10^5$  operations
- 120 V ~ 20 W L/R = 40 ms :  $5 \times 10^5$  operations

### Definitions

**P.O.F.** Minimum Positive Opening Force. The operating force that has to be applied to the operating device to produce the positive opening action.

**P.O.P.** Maximum Positive Opening Position. The position of the operating device at the moment when positive opening of the contacts occurs.

For other definitions, see "Basic concepts".

# Standard Switches (Double Break) Series 83 106 / 83 109 / 83 112 / 83 154

## General specifications

### Layout

- The NO and NC circuits must both be of the same polarity.

### Components

#### Material

- Case : polyamide (83 106 to 83 112)
- Case : Diallyl-Phthalate (83 154)
- Contacts : nickel silver

#### Actuators

- passivated mild steel
  - roller : nylon
  - adjustable screws : self-retaining
  - plates : passivated mild steel (zinc)
- Note : Fixing holes for these switches have metal ferrules.

Approvals: UL - cUL

## General specifications

### Layout

### Components

#### Material

- Case : polyester
- Contacts : silver
- Membrane : nitrile on 83 139 0  
silicone on 83 139 1 - 2 - 5

#### Actuators :

- stainless steel
- rollers : polyamide

- The NO and NC circuits must both be of the same polarity.

### Characteristics specific to 83 139 1

- Conform to standards EN 50 014 and 50 018
- Group II classified for explosive atmospheres other than mines subject to firedamp
- Temperature class T6, max. surface temperature 85°C
- LCIE certificate 880022U
- These switches can be enclosed in an envelope of a certified material, particularly to provide mechanical protection

- Degree of protection IP 67.

### Operating curve

## Types

# Sealed Flat Pack Switches Series 83 123 IP 66

## General specifications

### Layout

### Components

#### Material

- Casing : nitrile
- Contacts : silver
- Contact holder : polyamide
- Mounting plate : passivated mild steel (zinc)

### Operating curve

### Degree of protection IP 66

### Mounting - Operation

In order to comply with basic safety requirements, an insulator must be used if the device is being operated manually. One of the fixing holes must be used as a protective earth.

# Miniature Industrial Limit Switches Series 83 852 / 83 853 EN 50047

## Conform to the following standards :

IEC 536-1, IEC 947-5-1, CSA C22.2 No. 14, EN 50047, EN 60947-5-1, EN 60204-1, NFC 20030 class I for 83 852 class II for 83 853 UL 508, VDE 0660/200.

**Degree of protection :** IP 66  
**Version :** 1 pole

**Function :** Four-terminal double break contact element (form Zb) with positive opening NC contacts. The two moving contacts are electrically isolated from one another.

## Principle :

Independent snap action contact  
1 NO + 1 NC

Dependent action  
1 NO + 1 NC

Break Before Make

## Electrical characteristics

Assigned insulation voltage (U<sub>i</sub>) : 500 V  
Thermal rating (I<sub>th</sub>) : 10 A  
Use category : A300 - Q300  
AC15 = 6A/250 V - 1.9 A / 380 V  
DC 13 = 3A/24 V

## Short circuit test (under

IEC 947.5.1 § 8.3.4)  
- Current peak 1000 A at 250 V ~ 0.5 < cos φ < 0.7  
- Short circuit protection (SCPD) : fuse 10 A gF  
- Electrical protection by internal earth terminal (83 852)

## Connections :

Saddle washer and M 3.5 screw  
Max. wire cross-section : 2 x 1.5 mm<sup>2</sup> or 1 x 2.5 mm<sup>2</sup>

## Connection :

For 1/2" NPT

## Approvals :

UL listed A300 - Q300 - CSA A300 - Q300

# Industrial Limit Switches Series 83 862 EN 50041

**Conform to the following standards :**  
 EN 50041, IEC 947-5-1, VDE 0660/200  
 UL 508, CSA C22.2 No.14  
 IEC 536-1, EN 60204-1, NFC 20030  
 class I

**Degree of protection :** IP 66

**Function :** Four-terminal double break contact element (form Zb) with positive opening NC contacts.  
 The two moving contacts are electrically isolated from one another.

**Principle :**  
 Independent snap action contact  
 1 NO + 1 NC

**Dependent action**  
 1 NO + 1 NC

Break before make

**Electrical characteristics :**

Assigned insulation voltage (Ui) : 500 V  
 Thermal rating (Ith) : 10 A  
 Use category : A300 - Q300  
 AC15 = 6A/250 V - 1.9 A / 380 V  
 DC 13 = 3A/24 V

**Short circuit test** (under IEC 947.5.1 § 8.3.4)  
 - Current peak 1000 A  
 at 250 V - 0.5 < cos φ < 0.7  
 - Short circuit protection (SCPD) : fuse 10 A gF  
 - Electrical protection by internal earth terminal

**Connections :**  
 Saddle washer and M 3.5 screw  
 Max. wire cross-section : 2 x 1.5 mm<sup>2</sup> or 2.5 mm<sup>2</sup>

**Connection :**  
 1/2" NPT

**Approvals :**  
 UL listed A300 - Q300 - CSA A300 - Q300

**Types**

# Positive Opening Enclosed Limit Switches Series 83 870 IP 67

## Conforms to the following standards:

IEC / EN 60947.5.1  
 Dimensional conformity: NFC 63145  
 Low voltage directive: 73/23/EEC and 93/68/EEC  
 Protection from electric shock: NFC 20030 or IEC 60536 Class 1, degree of pollution 3.

**Temperature specification:** -25°/+70°C -13°/+158°F

## Degree of protection:

IEC 62529: IP 66/67  
 NEMA 250: Type 1, 3, 4, 6, 13

## Function:

Contact block is SPDT with double break contacts (form Zb). The NC contacts are positive opening. The NO and NC contacts are electrically isolated.

## Contact type:

Snap action SPDT-DB

## Electrical characteristics

Assigned impulse voltage (Uimp): 2500 V  
 Assigned insulation voltage (Ui): 500 V  
 Thermal rating (Ith): 10 A  
 With standard contacts: Minimum voltage 10V  
 Minimum current 100mA

## Use categories:

Following IEC 947.5.1 AC15 = 250V / 6A  
 DC13 = 24V / 8A  
 Following UL 508 A300 - Q150

## Electrical protection:

Under IEC 947.5.1  
 Short-circuit protection (SCPD): 6AgC fuse  
 Electrical protection by internal earth ground

## Connections:

Non-UL: 5 conductor cable H05VF 0.75mm<sup>2</sup> ext. Ø8mm (Black)  
 UL: 5 conductor cable (Grey)

## Approvals:

UL 508, UL 50

## Types

Standard

Roller turned 90°

## Standard products 2.0 meter cable\* side exit\*\*

### Actuator Type

Metal plunger

Metal roller plunger

Metal plunger with threaded barrel

Roller plunger - metal with threaded barrel

Metal roller lever (operates in both directions)

### Mechanical characteristics

Operating force minimum oz. (N)

Total travel force minimum oz. (N)

Positive opening force minimum oz. (N)

Mechanical life millions of cycles

Weight oz. (grams)

## Contact Sequences

Positions given are nominal

## Dimensions

mm

83 870 0

(\*) For other lengths of cables:

modify the last digit of the part number. For example:

0 = M12 connector output

1 = 1.0 meter cable

2 = 2.0 meter cable (Standard)

3 = 3.0 meter cable

(\*\*) For different cable outputs:

modify the next to the last digit of the part number.:

0 = Cable side exit (Standard)

1 = Cable bottom exit

2 = Connector side exit

3 = Connector bottom exit

## Other information

For different actuator arms, low voltage / low current contacts / low temperature, special contacts, custom wiring harness, etc...., please consult us.

Products and specifications subject to change without notice.

# Miniature Limit Switches Series 83 800

**Degree of protection :** IP 55 or IP 65 - Nema 4, 12, 13

**Version :** SPDT - double break

**Function :** Four terminal double break contact element (form Za). The contacts must be of the same polarity.

**Layout :**

A - For 83 803

B - Other types

## Electrical characteristics :

Assigned insulation voltage (Ui): 250 V

Current Rating

Assigned working currents (Ie): 5 A

**Operating curve :**

## Connections :

- Plug in : Screw terminals - max. wire section 2.5 mm<sup>2</sup>
- Non Plug in : Solder tags (able to accept 2.8 x 0.5 mm clips).  
Contact Crouzet for part # and availability

## Connection :

For N° 9 sealing gland, 15.2 dia., 1.411 pitch

- 25356113 - metal
- 25356109 - plastic

**Approvals:** UL cUL

## Type

**Plug in version**

## Features

- Top mounted plunger
- Top mounted plunger with threaded barrel
- Top mounted roller plunger with threaded barrel
- Side rotary head - momentary
- Top mounted roller plunger
- Flexible metal spring
- Fiberglass Rod

## Mechanical Characteristics

Operating force	N (oz)
Total travel force - min.	N (oz)
Operating Travel - min	mm (in)
Movement differential	mm (in)
Total travel - max	mm (in)
Mechanical life	operation
Operating temp.	C° (F°)
Degree of protection	
Weight	grams (oz)

## Accessories for 83 803 - Sold separately

\* Lever settings or positions dictated by direction in which block is fitted

Adjustable in 6° steps

Adjustable in 90° steps

## Dimensions

mm(in)

## Other information

For other accessories and special contacts, or special modes of operation, please contact factory.  
Low temperature version available.

Products and specifications subject to change without notice.

# Automotive Limit Switches Series 83 731/ 83 732 / 83 733

1

**Conform to the following standards :**  
IEC 356.1 - EN 60204.1  
NFC 20030 : Class I - 83 731 - 83 732  
Class III - 83 733

**Degree of protection :**  
IP 56 - IP 66 depending on type

**Version :** 1 pole

**Function :** 3-terminal single break two-way contact element (form C: inverter).

**Principle :**

**Electrical characteristics :**

Assigned operating current (Ie)  
83 731 - 83 732 : 5 A 250 V  
83 733 : 5 A 50 V  
Thermal rating (Ith) : 12 A

**Operating curve :**

**Connections :**

PVC cable (A05 - VV - F) 0.50 m long  
3 conductors cross-section 0.75 mm<sup>2</sup>  
Sheathed, ext. Ø : 7.6 mm  
Core connections : 1 : black (common)  
2 : brown (NC)  
4 : blue (NO)

**Electrical protection :**

Earthing terminal for version 83 731 and 83 732.

**Approvals :**

CSA A300.

Order/Technical Support – Tel: (800) 677-5311 / FAX: (800) 677-3865 / www.crouzet-usa.com

**Conform to the following standards :**

IEC 356.1 - NFC 20030 class I : plunger actuated via earthed metal part or an insulating device providing additional insulation.

**Version :**

1 pole

**Degree of protection :**

IP 66/67 Resistant to hydrocarbons and saline mist (400 hours).

**Function :**

Single break two-way contact element  
(Form C : inverter).

**Components :**

Materials	Casing	: thermoplastic polyester
	Plunger	: stainless steel
	Contact	: Agcdo - AgNi (gold)
	Nuts	: galvanized steel
Sealing	Silicon and teflon seals	
	PU resin.	

**Principle :**

**Electrical characteristics :**

Standard :	8 A 250 V ~ : 30 000 operations
	200 mA 24 V = relay load L/R = 3 ms 10 <sup>7</sup> operations
Two-level :	1 mA 4 V : 10 <sup>7</sup> operations
	200 mA 24 V = relay load L/R =
	3 ms 5 x 10 <sup>6</sup> operations
	5 A 250 V ~ : 30,000 operations

The two-level type is designed to operate both on two-level (1 mA 4 V minimum) and medium current (5 A maximum) circuits.  
However, a given product can only switch a single type of circuit throughout its life.

**Connections :**

3 x 0.75 mm<sup>2</sup> PVC cables. 0.50 m long  
Conforms to NFR 13414/13415.

**Core connections :**

- 1 = black (common)
- 2 = gray (NC)
- 4 = blue (NO)

**Mounting :**

Max. tightening torque : 9 Nm.

**Types**

Standard	83 589 0	1
Two-level	83 589 8	

**Control mechanism**

# Sealed Limit Switches Telescopic-Actuator Series 83 581

**Conforms to the following standards :** NFC 20030 class II - NFC 20010

**Degree of protection :** IP 67

**Contact type :** Three terminal single break contact element (Form C: SPDT)

**Layout :**

## Electrical characteristics :

Assigned working currents (Ie): standard 10 A - 250 V~  
low current 0.1 A - 250 V~

## Electrical endurance :

Standard : 10 A - 250 V : 40 000 operations  
5 A - 250 V : 100 000 operations

Low current : Designed for use from 1 to 100 mA at 4 to 30 volts.  
In these conditions, the electrical endurance exceeds the mechanical life.

## Connections :

Flexible leads 3x1 mm<sup>2</sup>. Length 0.50 m  
Cable 3x0,75 mm<sup>2</sup>. Length 0.50 m  
Core connections: 1: black  
2: brown  
4: blue

## General Specifications :

### Operation

To defeat the switch  
83 523 - 83 528. Depress the plunger and turn it a quarter of a turn.  
To reset the switch to rest position depress the plunger.

### Components

Bracket  
Zinc plated mild steel  
Plunger  
Stainless steel  
Switch  
83 523, 83 106 0, 83 528, 83 132, 83 133

### Layout

83 523 - 83 528

### Current Ratings

83 523 - 10 Amps  
83 528 - 5 Amps  
Other current ratings are available

**For low current applications, gold contacts are available**

**Approvals:** Please consult us.

**Conform to the following standards :**

IEC 536-1, IEC 947-5-1, CSA C22.2 N°14  
 EN 50047, EN 60204-1, EN 60947-5-1  
 NFC 20030 class II for 83 854  
 class I for 83 855  
 UL 508, VDE 0660/200

**Degree of protection :** IP 66

**Function :** Four-terminal double break contact element (form Zb) with positive opening NC contacts.  
 The two moving contacts are electrically isolated from one another.

**Principle :**

Dependent action contact (1 NC + 1 NO)  
 Break before make

After actuation, the safety contact remains locked open in position "NC". It is unlocked by pressing the reset button.

**Electrical characteristics :**

Assigned insulation voltage (Ui) : 500 V  
 Thermal rating (Ith) : 10 A  
 Use category : A300 - Q300  
 AC15 = 6A/250 V - 1.9 A / 380 V  
 DC 13 = 3A/24 V

**Short circuit test** (under IEC 947.5.1 § 8.3.4)

- Current peak 1000 A at 250 V ~ 0.5 <math><math>\cos \varphi < 0.7</math></math>
- Short circuit protection (SCPD) : fuse 10 A gF
- Electrical protection by internal earth terminal (83 850)

**Connections :**

Saddle washer and M 3.5 screw  
 Max. wire cross-section : 2 x 1.5 mm<sup>2</sup> or 1 x 2.5 mm<sup>2</sup>

**Connection :**

For No. 13 sealing gland

**Approvals :**

Slow break NC + NO version  
 UL / CSA : please consult us.

# Hermetically Sealed Limit Switches

## Hermetically sealed microswitch

Part # 83 151 001  
Without accessories  
(basic cell -55° +150°C)

## Characteristics

Min. current	5 V $\equiv$	mA	1
Nominal current			
Resistive	48 V $\equiv$ <sup>(1)</sup>	A	3
Lamp	115 V - 400 Hz	A	1
Lamp	30 V $\equiv$ <sup>(1)</sup>	A	2
Resistive	30 V $\equiv$ <sup>(1)</sup>	A	3
Inductive L/R = 0.005 s	30 V $\equiv$ <sup>(1)</sup>	A	1.5
Resistive	220 V $\sim$	A	1
Inductive - cos $\phi$ 0.8	220 V $\sim$	A	0.4
Service life at nominal current <sup>(3)</sup> - operations		min	200,000
Dielectric strength between connections and ground		V	1200
Rigidity between connections		V	1000
Insulation resistance (at 500 Vdc)		M	100
Voltage drop at 1 A <sup>(2)</sup>		V	0.02
Operating temperature		°C	-55 +150
Resistance to shock <sup>(2)</sup>		g/ms	200/11
Resistance to vibration <sup>(3)</sup>		g/Hz	80/20 $\rightarrow$ 2000

(1) For a service life of 100,000 operations - Permissible current 4A inductive 7 A resistive for normally open or normally closed.

(2) On soldered connections - For wired connections add 0.1 V per metre.

(3) Value for microswitch without control button

## Connections (consult factory)

Wired (0.38 mm<sup>2</sup> - 0.50 m long)

Soldered

A - Parallel to the axis (//)  
B - Perpendicular to the axis (⊥)

## Dimensions

Add the dimensions of the various connections for the total dimensions ( $\rightarrow$  indicates the direction of the wires)

107 - Stop washer - 0.8 thick  
112 - Locating pin - h.2  
120 - Nut h 2.5 - 15 across flat

### Panel cut-out

## Part numbers

Wire 0.38 mm <sup>2</sup>	with parallel wires	<b>83 770 025</b>
0.50 m long	perpendicular	<b>83 770 035</b>
With single-pole roller plunger		•

## Characteristics

Max operating force	N	12
Min. release force	N	1.5
Permitted overtravel force	N	50
Positive overtravel stop		•
Max. pre-travel	mm	0.3
Max. differential travel	mm	0.05
Min. overtravel	mm	3
Resistance to shocks	g/ms	100/11
Resistance to vibrations	g/Hz	50/800 $\rightarrow$ 2000
Weight (without wires)	g	20
Service life (operations - min)		100,000

Min. release force	N	10	10
Max. total travel force	N	150	150
Max. pre-travel	mm	1.2	1.2
Max. differential travel	mm	0.2	0.2
Min. overtravel	mm	3.2	3.2
Weight (with wires)	g	30	37

### General characteristics

Nominal current	10 V $\equiv$	A	0.01
Resistive	30 V $\equiv$	A	4
	220 V $\sim$	A	1
Inductive L/R = 0.005 s	30 V $\equiv$	A	2
	220 V $\sim$	A	0.5
Service life at nominal current (min. operations)			50,000
Dielectric strength between connections and ground	V		1500
Dielectric strength between connections	V		1000
Insulation resistance (at 500 Vdc)	M		100
Voltage drop at 1 A*	V		0.06
Operating temperature	°C		-55 +125
Resistance to shock	g/ms		50/11
Resistance to vibration	g/Hz		10/20 → 2000

\* For flying leads, add 0.1 V/metre.

### To order, specify :

Standard products,  
non stocked

**1** Part number

Example : Waterproof limit switch - 83 777 021

# Cable Pull Limit Switches Series 83 863 / 83 864

## Conforms to the following standards:

EN 50041 - IEC 947.5.1 - VDE 0660/2  
 UL 468 - UL 508 - CSA C22.2 No14  
 NFC class 1 - EN 418 - Machine Directive 89/392/CEE

**Degree of Protection :** IP 66

**Function :** Four separate terminals with two separate NC switching elements with positive opening contacts. One set works in the cable break mode and the other works in the cable pull mode.

Both elements are electrically isolated from one another.

## Layout :

Cable attached with tension      Cable Pull Mode      Cable Break Mode

## Electrical characteristics :

Assigned insulation voltage (Ui) : 500V  
 Thermal rating (Ith) : 10 A  
 Use category : A300 - Q300  
 AC15 = 6A/250V - 1.9 A/380V  
 DC13 = 3A/24V

## Short circuit test (under IEC 947.5.1 sec. 8.3.4)

- Current peak 100 A at 250V $\sqrt{0.5 < \cos < 0.7}$
- Short circuit protection (SCPD) : fuse 10 A gF
- Electrical protection by internal earth ground

## Connections :

Saddle washer and M3.5 screw  
 Max. wire cross section : 2 x 1.5 mm<sup>2</sup> or 1 x 2.5 mm<sup>2</sup>

## Connection :

For No 13 or 1/2" NPT sealing gland

## Approvals :

Pending

## Typical Mounting:

The cable is to be tightened until the head is extended with the slot below the E-ring visible. This sets the switch.

1. Lock Nut
2. Eyelet Bolt
3. Cable through eyelet bolt.
4. Cable clamps
5. Cable - red PVC (red is international color for safety)

## Part Numbers

Metric No 13	83863001
1/2" NPT	83864001

## Mechanical Characteristics:

Minimum Operating Force	cmN	85
Minimum Operating Distance	mm	4
Movement Differential	mm	2
Maximum Total Travel	mm	8
Mechanical Life	operations	3x10 <sup>7</sup>
Operating Temperature	C°	-25 to +70
Storage Temperature	C°	-40 to +70

## Mounting Characteristics :

Maximum Length of Cable	meters	6
-------------------------	--------	---

## Dimensions :

Standard products available in-stock in normal quantities

# Miniature Plastic Key Lock Limit Switches Series 83 893 0 / 83 893 1 IP 67

- Key-operated safety interlock switches for monitoring the moving cover
- Plastic bodies and heads
- Heads have 4 possible positions
- Positive opening contacts

## General characteristics

### Environment

Conforming to standards	Products	IEC 947-5-1, EN 60 947-5-1, UL 508, CSA C22-2 no.14, JIS C4520 (See P. 2/2 and 2/3)
	Machine assemblies	IEC 204-1, EN 60 204-1, EN 1088, EN 292
Certifications		UL, CSA
Protective treatment		In normal operation: "TC"
Temperature	Use	-25°C, +70°C
	Stored	-40°C, +70°C
Vibration resistance		5 gn (10...500 Hz) according to IEC 68-2-6
Shock resistance		10 gn (duration 11 ms) according to IEC 28-2-27
Degree of protection		IP 67 according to IEC 529 and IEC 947-5-1
Cable entry		Cable gland 11

### Electrical characteristics

Assigned working characteristics	AC 15 A 300 Ue = 240 V, Ie = 3A or Ue = 120 V, Ie = 6 A DC 13 Q 300 Ue = 250 V, Ie = 0.27 A or Ue = 125 V, Ie = 0.55 A
Assigned insulation voltage	Ui = 500 V according to IEC 947-5-1 Ui = 300 V according to UL 508, CSA C22-2 no. 14
Assigned impulse voltage	Uimp = 6 KV acc. to IEC 947-5-1
Thermal rating	Ithe = 10 A according to IEC 947-5-1
Electric shock protection	Class 2 according to IEC 536
Resistance between terminals	30 m according to IEC 954-5-4
Short-circuit protection	Cartridge fuse 10 A gG (gl)
Connection	Screw clamp terminals Clamping capacity min. 1 x 0.5 mm <sup>2</sup> , max. 1.5 mm <sup>2</sup> with or without ferrule
Electrical life	According to IEC 947-5-1 appendix C

## Part numbers

### Type of contact

NC+NO	2-pole contact NC+NO break before make, slow action	<b>83 893 001</b>

## Locking / unlocking using an electromagnet

Type 83 893 2 safety switches are fitted with an electromagnet for locking/unlocking the guard.

With the guard locked, the force required to remove the key is 50 daN.

In addition to the 2-pole contact element actuated by the key, type 83 893 2 limit switches also have a positive break type "NC" contact element, actuated by the electromagnet.

The "NC" contact is integrated in the machine safety circuit.

## Unlocking using a special tool

Type 83 893 2 safety switches are supplied with a tool (1) which can be used to unlock the moving guard, bypassing the electromagnet.

Unlocking using a tool is recommended in the following cases:

- machine maintenance (if the tool is in the "UNLOCK" position and then removed, this will prevent the machine from restarting accidentally, therefore ensuring the safety of maintenance personnel),
- mains failure,
- problem with unlocking (locking cannot be released: fail-safe condition).

Unlocking by applying voltage to the electromagnet always takes priority over unlocking using a tool. The "NC" contact is integrated in the machine safety circuit.

## Power supply for the electromagnet on 83 893 2

The electromagnet for type 83 893 2 safety switches is supplied by an electronic circuit which increases its service life. As the 24 V version is protected by a bridge rectifier, an A.C. or D.C. supply can be used.

The 120 V and 230 V versions are A.C. only. It is also protected against voltage surges.

## Dimensions

83 893 2

## Category 1 connection according to EN 954-1

Examples of wiring diagrams with a fuse to provide protection against short-circuits in the cable or tampering.

### Locking by removal of voltage 83 893 2

## Locking / unlocking using an electromagnet

Type 83 894 1 safety switches are fitted with an electromagnet for locking/unlocking the guard.

With the guard locked, the force required to remove the key is **200 daN**.

In addition to the 3-pole contact element actuated by the key, 83 894 1 limit switches also have a positive break type **“NC + NO” contact element, actuated by the electromagnet**. The NC contact is integrated in the machine safety circuit, and the NO contact indicates the position of the electromagnet.

## Locking using a key on 83 894 1

Type 83 894 1 safety switches are supplied with a key-operated lock which can be used to unlock the moving guard, bypassing the electromagnet.

Unlocking using a key-operated lock is recommended in the following cases :

- machine maintenance (if the key is turned to “UNLOCK” and then removed, this will prevent the machine from restarting accidentally, therefore ensuring the safety of maintenance personnel),
  - mains failure,
  - problem with unlocking (locking cannot be released: fail-safe condition).
- Unlocking by applying voltage to the electromagnet always takes priority over unlocking using a key-operated lock.

The locking mechanism for standard devices allows the key to be removed in the “LOCK” and “UNLOCK” positions.

## Power supply for the electromagnet on 83 894 1

The electromagnet for type 83 894 1 safety switches runs on D.C. and is therefore particularly reliable.

As it is protected by a **bridge rectifier**, A.C or D.C supplies can be used (24 V, 48 V, 120 V or 230 V).

It is also protected against voltage surges.

## Connections

### Category 1 according to EN 954-1

Examples of wiring diagrams with a fuse to provide protection against short-circuits in the cable or tampering.

#### Locking by removal of voltage “NC+NO+NO” 83 894 12 •

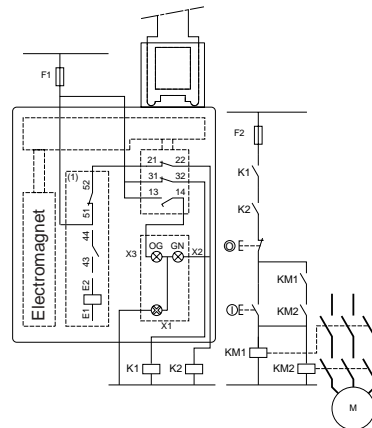

- (1) Auxiliary contact  
 E1-E2: Power supply for electromagnet  
 43-44: Electromagnet signal contact  
 13-14: Safety contact available for redundancy

### Category 3 according to EN 954-1

Examples of wiring diagrams with redundancy of the switch contacts, without monitoring.

#### Locking by removal of voltage “NC+NC+NO” 83 894 13 •

- 33-X1: LED (orange): key not inserted  
 51-X1: LED (green): key inserted and locked  
 21-52: Safety pre-wiring compulsory

Degree of protection		IP 67 according to IEC 529 and IEC 947-5-1
Cable entry		One threaded entry for cable gland 11

### Electrical characteristics

Assigned working characteristics	AC 15 A 300 Ue = 240 V, Ie = 3A DC 13 Q 300 Ue = 250 V, Ie = 0.27 A
Assigned insulation voltage	Ui = 500 V according to IEC 947-5-1 Ui = 300 V according to UL 508, CSA C22-2 no. 14
Assigned impulse voltage	Uimp = 6 KV according to IEC 947-5-1
Thermal rating	Ithe = 10 A according to IEC 947-5-1
Electric shock protection	Class 2 according to IEC 536
Resistance between terminals	3 0 m according to IEC 954-5-4
Short-circuit protection	Cartridge fuse 10 A gG (gl)
Connection	Screw clamp terminals Clamping capacity min. 1 x 0.5 mm <sup>2</sup> , max. 1.5 mm <sup>2</sup> with or without ferrule
Electrical life	According to IEC 947-5-1 appendix C
Minimum actuation speed	0.01 m/s

## Part numbers

### Position of lever

### Type of contact

NC+NO 2-pole contact NC+NO break before make, slow action

# Cable Pull Limit Switches Series 83 894 2 IP 67

- “Emergency stop” safety switches are essential in areas or on machinery where a danger exists during operation
- The cable can be used to request an emergency stop at any point in the operating zone
- Applications : conveying, materials handling, machine tools
- Length of the protected zone: up to 15 metres

## General characteristics

### Environment

Conforming to standards	Products	IEC 947-5-1, EN 60 947-5-1, VDE 0660-200, EN 418, draft EN 616
	Machine assemblies	EN 60 204-1, EN 292 machinery directive: 89/392/EEC and 91/368/EEC, social directive: 89655/EEC
Certifications		UL, CSA
Protective treatment		"TC"
Temperature	Use	-25°C, +70°C
	Stored	-40°C, +70°C
Vibration resistance		10 gn (10...150 Hz)
Shock resistance		50 gn (duration 11 ms) according to IEC 28-2-27
Degree of protection		IP 65 according to IEC 529 and IEC 947-5-1
Mechanical life		100,000 operating cycles
Length of protected zone		15 m
Cable entry		3 entries for cable gland with a maximum capacity of 12 mm

### Electrical characteristics

Assigned working characteristics	AC 15 A300 Ue = 240 V, Ie = 3 A DC 13 Q300 Ue = 250 V, Ie = 0.27 A
Assigned insulation voltage	Ui = 500 V degree of pollution 3 according to IEC 947-5-1 Ui = 300 V according to UL 508, CSA C22-2 no. 14
Assigned impulse voltage	Uimp = 6 KV according to IEC 947-5-1
Thermal rating	Ithe = 10 A
Electric shock protection	Class 1 according to IEC 536 and NF C 20-030
Resistance between terminals	3 5 m according to IEC 954-5-4
Short-circuit protection	Cartridge fuse 10 A gG (gl)
Terminal labelling	According to CENELEC EN 50013

## Part numbers

### Type of contact

NC+NO	2-pole contact	<b>83 894 201</b>
	NC+NO, slow action	

### Additional characteristics

Distance between the cable supports	5 m
Manual reset	Using booted pushbutton
Cable anchor	Right or left
Weight	0.865 kg

### Mounting accessories

Fixed cable support	<b>79 214 571</b>
---------------------	-------------------

Pulley support	<b>79 214 577</b>
----------------	-------------------

Pulley for cable max. Ø 5 mm	<b>79 214 576</b>
------------------------------	-------------------

End guards	<b>79 214 572</b>

## Installation

### Description of a typical installation

Pulleys must be used if the cable is ever installed with angles (example: perimeter of a machine).

#### Warning:

The sum total of the cable angles must be less than 180°.

## Basic principles

### Positive operation

Device operating

### Latching

Device stopped

### Reset

Device stopped (waiting)

**Positive operation:** The contacts used are positive break type contacts. The device is tripped by positive actuation.

**Latching:** The device is mechanically latched in the tripped position ("NC" safety contacts open). The "NO" contact is only used for signalling.

**Reset:** The devices have a reset button which closes the safety contact. The machine must only be started by deliberately pressing a start-up button, separate from the emergency stop.

## Cable expansion: d

The cable may increase or reduce in length. Variations in length are mainly related to temperature variations on the site of use.

**83 894 201** devices are fitted with cable voltage indicators which can be used to check (and correct if necessary) the voltage at any time.

## Actuating force and arrows

This is the value of the force **F1** exerted on the cable, causing the device to trip. **f** is the distance covered by the actuator at the bending point of the cable between the point of equilibrium during operation and the tripping point of the device.

### Operating values:

Average values of the tripping arrows and forces for 5 m fixing centres (standard force):

- Arrow **f**: 160 mm
- Arrow **F1**: 2 daN

## Standards

**83 894 201** devices meet the requirements of the harmonised European standard **EN 418** on "emergency stop devices". The strongly recommended use of an end spring meets the requirements of the draft European standard **EN 616** on "continuous materials handling systems and equipment".

## Other information

Products and specifications subject to change without notice.

Products and specifications subject to change without notice.

Order/Technical Support – Tel: (800) 677-5311 / FAX: (800) 677-3865 / www.crouzet-usa.com

## Presentation

**83 895 0** and **83 895 101** foot switches are an ideal solution for controlling starting and stopping of numerous industrial machines with many different operating modes: pulsed, step-by-step, continuous.

The range comprises metal foot switches (for heavy loads where there is an increased risk) for heavy duty requirements, and plastic foot switches (for lighter loads where there is a reduced risk).

Fitted with a **protective cover**, metal foot switch **83 895 101** should be used whenever a start/stop command could pose a danger (**increased risk**).

**83 895 0** foot switches **without covers** are suitable for start commands which pose a **reduced risk** and for machine stop commands.

## Terminology

### Positive break operation

A device meets the requirements of this specification when all its normally closed contact elements can be safely set to their opening position.

All **foot switches** fitted with a snap action "NC+NO" contact element are positive break type and meet all the requirements of standard IEC 947-5-1, section 3.

### Snap action contact

The linear speed of the moving contacts is independent of the speed of the control device. This feature enables high levels of electrical performance, even with low control device linear speeds.

## Safety contacts

### Devices with snap action positive break type contacts.

Metal foot switches can have one or two "NC + NO" contact blocks. These foot switches are in positive operation when released: positive actuation is required to maintain the machine in rest mode or cause it to stop (machine stop).

## 2-step pedals

Pedals with two steps are ideal for machines with two operating speeds.

Examples:

- first speed: slow (used for tool adjustment or maintenance),
- second speed: fast (used for normal machine operation).

The first step, connected to an "NC + NO" contact, is achieved by briefly applying gentle pressure to the foot switch (6 mm and 2 daN depression).

The second step, connected to a second "NC + NO" contact, is achieved by applying maximum pressure to the foot switch (12 mm and 9 daN for depression up to the end stop).

1st step

2nd step

## Dimensions

**83 895 101** with protective cover

**83 895 0**

- 1 untapped hole for cable entry maximum capacity 12 mm
- 1 untapped hole for cable entry maximum capacity 8 mm

# Emergency Stop Switches Series 79 697

- Ø 22 control unit with mechanical latch
- "CE" conforming product
- Positive opening contacts
- Pushbutton with positive mechanical action acc. to EN 418

## Technical characteristics of contacts

Safety component	Positive opening contacts	
Certification	UL, CSA	
Mechanical life	3 x 10 <sup>6</sup> operations	
Electrical life	Operating category AC21 230 V/50 - 60Hz conforms to IEC 947-3	
	Working current	Number of operations
	(A)	(x 10 <sup>6</sup> )
	14	0.2
	10	0.5
	6	1
	2	3
Insulation voltage	Degree of pollution 3-690 V conforms to UTE, VDE, IEC for flush-mounting	
Voltage for withstanding shocks	U impulse: 6 kV	
Electrical performance	<b>A.C.</b> Working voltage (50 -60 Hz)	Working current
		(IEC 947-3) (IEC 947-5-1)
	Ue (V)	AC21 AC15 Ie (A) Ie (A)
	230	14 6
	400	12 4.5
	440	11 3.5
	500	10 2.5
	690	6 1
	<b>D.C.</b> Working voltage	Working current
		(IEC 947-5-1) DC13 Ie (A)
	Ue (V)	
	24 V	1.5 A
	48 V	1 A
	60 V	0.7 A
	110 V	0.3 A
	220 V	0.2 A
Protection against short-circuits	HPC fuse 10 A gl - gG conforms to IEC 269	
Temperature limits	Use	- 30 to + 60 °C
	Storage	- 50 to + 80 °C
Terminal capacity	2 x 2.5 mm <sup>2</sup> with cable ends	
Connection	Via captive screw terminals	
Protection indices	Pushbutton	IP 65
	Box	IP 657 double insulation

## Type

# Two-Hand Control Console Series 85 100

- Used in conjunction with a "KZH3" safety start module for two-hand control applications: folding, clipping, punching, rail-cutting, bending, drilling, presses, etc.
- Supplied with an emergency stop button and 2 spring-return mushroom head pushbuttons.
- Conforms to EN 574 concerning safety applications

## Part numbers

# Analog Inductive Proximity Detectors

The analog sensors offer an output voltage variation which is linear and proportional to the distance of the object being detected. The output voltage will be reduced as the object approaches the sensor.

<b>Form</b>	M 18 x 1 x 80
Sensing distance in linear zone (mm)	5
Housing	Stainless Steel
Connection type	PVC 2.0 meter cable
<b>Part number reference</b>	<b>IMB1805T</b>
Min./max. supply voltage	12 to 24 VDC
Own consumption (I <sub>o</sub> )	1 mA
Output voltage at 5mm	3 V
Voltage limits in linear zone	0.4 to 3 V at 24 VDC
Load resistance	10 to 100 k
Constant ratio in linear zone	At 24 V 52 mV / 0.1mm
	At 12 V 26 mV / 0.1mm
Switching frequency	10 kHz
Operating temperature	0 to 60°C

## Accessories

Mounting flanges, see page 3/102  
Connectors, see pages 3/100 to 3/101

## Inductive Proximity Detectors NAMUR (Acc. DIN 19234)

### Operating principle

NAMUR sensors (DIN 19234) are 2-wire DC proximity detectors with no trip or output amplification stage. They are polarised and their internal impedance alters in proportion to the distance between the sensor face and the target. NAMUR sensors are designed for use with an external amplifier which converts the variations in impedance into digital signals.

### Output characteristics

### Wiring diagrams

Without external amplifier

With external amplifier

The nominal sensing range ( $S_n$ ) specified corresponds to a current consumption of 1.55 mA with a supply voltage of 8.2 V to the circuit and  $R_i = 1$  Kohm. The table below gives the level of current consumption at nominal sensing range ( $S_n$ ) for other supply voltage and resistance values.

Supply voltage V (Vdc)	Resistance $R_i$ (Kohm)	Current consumption I at $S_n$ (mA)
5		
12	0.39	0.7
15	1.8	2.3
24	2.2	2.9
	3.9	3.8

## Introduction

These basic principles apply to all our precision switches. The specific characteristics of each model are given in more detail in the relevant production sections.

## Introduction

Our switches are high-precision, snap-action switches and these are a few of the key features which distinguish our switches:

- High ratings with small dimensions
- Very short travels
- Low operating forces
- Highly dependable force and travel values
- Long life
- Large range of actuators for easy adaptation to the most varied applications

## Switch construction

### Single-pole changeover switch (i.e. 83 161)

#### Electrical function SPDT (C)

#### Normally closed (NC)

#### Normally open (NO)

### Double-pole changeover switch (i.e. 83 132 0)

#### Electrical function SPDT (C)

#### Normally closed (NC)

#### Normally open (NO)

The NO and NC circuits must both be of the same polarity.

Products and specifications subject to change without notice.

Order/Technical Support – Tel: (800) 677-5311 / FAX: (800) 677-3865 / [www.crouzet-usa.com](http://www.crouzet-usa.com)

# Snap Action Switches – Technical Guide

## Mechanical characteristics

### Terminology - Forces - Positions - Travel

The reference point for the figures given for travel and forces is a point F situated on the button in the case of a plain microswitch, or, generally, 3 mm in from the end of a plain actuator. The reference point for the positions is one of the fixing holes, unless otherwise indicated.

### Graphs of forces vs. travel

Operating force (external) applied to the operating device

Products and specifications subject to change without notice.

Order/Technical Support – Tel: (800) 677-5311 / FAX: (800) 677-3865 / www.crouzet-usa.com

## Mechanical characteristics

### Changeover time

This is the time taken by the mobile contact when moving from one fixed contact to another until it becomes fully stable (contact bounce included). This time is a function of the contact gap, the mechanical characteristics of the snap action and the mass of the mobile element. However, thanks to the snap-action mechanisms employed, the time is largely independent of the speed of operation. It is normally less than 20 milliseconds (including bounce times of less than 5 ms).

### Mechanical durability

This is an average value indicating the purely mechanical performance of a switch when not subject to any electrical load. It may be useful for evaluation purposes in cases where the power levels involved are very low and the electrical life is thus close to the mechanical life.

### Maximum speed and rate of operation

Our switches will work at speeds of operation varying over a very wide range : normally from 1 mm/min to 1 ms. The maximum rate of operation with a low electrical load may be as high as 10 operations/second.

### Mounting - Operation

- To conform to the leakage paths and air gaps in the standard EEC24 - EN/IEC 61058 - EN/IEC 60947:
- An insulation pad must be inserted between the switch and the fixing surface if the latter is metal.
- Manual operation of a metal actuator must only be carried out with the help of a secondary actuator made of insulating materials.
- The installer must ensure adequate protection against direct contact with the output terminals.

### Fixing - Screw torque

- Unless otherwise indicated in the mechanical characteristics table, the torque required for the fixing screws must conform to the following values :

Ø of fixing screw	2	2.5	3	3.5	4	
Screw torque in cm.N	maximum	25	35	60	100	150
	minimum	15	25	40	60	100

## Environmental conditions

### Resistance to shocks and vibrations

Resistance to impact and vibration depends on the mass of the moving parts and on the forces holding the contacts together. Generally speaking, for a switch without an actuator :

- Vibration >10 G 10 at 500 Hz
- Impact > 50 G 11 ms 1/2 sine-wave

Further information on request.

### Ambient operating temperature

The maximum and minimum temperatures at which the mechanical and electrical characteristics of the switch will remain substantially unaltered.

### Degree of protection

Under the IEC 529 or NFC 20010 classification scheme, standards employ an IP code to define the degree or class of protection which electrical equipment provides against access to live components, the entry of solid foreign bodies and ingress of water.

1st numeral	
Protection equipment provides against the entry of solid foreign bodies	Protection for persons against access to dangerous parts
0 (not protected)	(not protected)
4 diameter 1 mm	1 mm Ø wire
5 protected against dust	1 mm Ø wire
6 sealed against dust	1 mm Ø wire

2nd numeral	
Protection equipment provides against ingress of water	
0 (not protected)	
4 splashed water	
5 hosed water	
6 high-pressure hosed water	
7 temporary immersion	
8 prolonged immersion	

Under this classification, our switches come within the following categories :

- Plain switches = IP 00
- Protected switches = IP 40 with isolated connection
- Sealed switches = IP 66 or IP 67

Products and specifications subject to change without notice.

Order/Technical Support – Tel: (800) 677-5311 / FAX: (800) 677-3865 / www.crouzet-usa.com

## Dielectric characteristics

### Current rating

This is the current the switch is capable of making and breaking which forms the basis for the life tests.

### Thermal rating

This is the current the switch will withstand when not being operated, for a temperature rise of not more than 60 °C.

### Switch rating

AC voltages: see the current rating.  
With DC voltages the switch rating is very much dependent on the voltage, the contact gap (CG) and the nature of the load being switched. There is a risk of prolonged or indeed permanent arcing if the following limits are exceeded:

For special applications, please enquire.

### Operating curves

These indicate the electrical life of the switches, under standard conditions (20 °C, 1 cycle/2 seconds), by showing the number of switching operations which can be performed with given types of load.

Products and specifications subject to change without notice.

## Circuit types

### Resistive circuit

For a circuit with alternating voltage, this is in phase with the current :  $\text{Cos } \varphi = 1$ .

### Inductive circuit

A circuit of this type with direct current is characterised by a time constant.  
An inductive circuit, with alternating voltage, for example, incorporating a motor ( $\text{cos } \varphi < 1$ ) can cause current surges up to 6 times the normal current. For certain switches, we give electrical endurance curves with  $\frac{L}{R} = 5 \text{ ms}$  in DC and  $\text{cos } \varphi = 0.8$  in AC.

### Lamp and capacitance circuit

The currents at the time when the circuit is closed are very high in this case, being up to 10 times the nominal figure.

### Internal resistance

This consists of the intrinsic resistance (fixed) of the parts carrying current and the contact resistance (variable).  
Close to the tripping point and release position, the force holding the contacts together drops considerably and this may cause a rise in internal resistance.

### Insulation resistance

The insulation resistance of the switches is generally greater than 50,000 M measured at 500 V DC.

### Dielectric strength

The dielectric strength of our switches is generally better than:  
- 1500 volts between live parts and earth  
- 1000 volts between contacts  
- 600 volts between contacts for switches whose contact gap is less than 0.3 mm.

## Contact materials

### Choice of contact material

To choose the best material for the contacts there are various factors to be considered:

- the current and voltages levels
- the type of load
- the number of operations
- the switching frequency
- the environmental conditions.

### Contacts for general-purpose use

Our switches are normally fitted with silver contacts. These are suitable for the majority of applications and provide the best compromise between electrical performance, thermal performance and life.

### Contacts for low-power circuits

$E < 20 \text{ V}$  and/or  $I < 100 \text{ mA}$

The contacts used in this case are plated with gold (or a gold alloy) for good reliability even in corrosive atmospheres.

### Contacts for special applications

We can supply special contacts suitable for particular applications, such as:

- Ag CdO contacts for very high drawn currents,
- Cross Bar gold-plated Ag Ni contacts which allow a very wide range of applications to be covered by a single type of switch.

## Electrical recommendations

### Inductive circuits

To increase the life of contacts and their DC rating, arcing on opening can be cut down by using the following circuits:

#### - for DC

Fast diode  $V_R > 5 \times V \text{ nominal}$   
 $I \text{ nominal} > 10 \times I \text{ winding}$

#### - for DC or AC

A - RC circuit across inductor  
 B - RC circuit across switch

$C \text{ (nF)} \sim 100 \times I \text{ nominal (A)}$   
 $V \text{ insulation} > V \text{ peak}$   
 $R(\Omega) \sim \text{load resistance} (\Omega)$

C - Varistor circuit across load  
 D - Varistor circuit across switch  
 $V > V \text{ peak supply}$

$$E \text{ (J)} = \frac{P \text{ (V.A.)}}{100}$$

### Very low power circuits

In very low power circuits ( $I > 1 \text{ mA}$ ,  $V \leq 5 \text{ V}$ ), switching is highly sensitive to environmental conditions (the atmosphere, pollution).

If the supply is powerful enough, adding a passive resistor to increase the current broken by the switch to a few milliamps will substantially improve reliability of operation.

R - Load resistance  
 C - Very low current load

## Methods of actuation

### Direct operation

Preferably, force should be directly applied to the device – the plunger – along its axis for operation. However, the majority of our microswitches will accept skewed operation provided the angle of application is not more than 45°.

The device used to apply the force must never hamper the travel of the plunger to the tripping point (TP). It must under all circumstances move the plunger through at least 0.5 times the overtravel (OT) quoted. Steps must also be taken to see that it does not cause the overtravel limit (OL) or maximum overtravel force (MOF) quoted to be overrun or exceeded.

### Operation by actuator

When operation is by a roller lever, force should preferably be applied in the direction shown on the left.

Where the movements involved are fast, the ramp should be so designed as to ensure that the operating device is not subjected to any violent impact or abrupt release.

## Quality

Quality is built into our switches from the initial design stage right through to the point where they are put into action at the customer's premises. All departments of the company are guided by the Quality Manual and the stipulations of the ISO 9000 international standard.

The location where the switches are manufactured (the la Plaine works at Valence) holds **ISO 9001** certification, guaranteeing a high standard of quality.

### Control procedures

Manufacturing quality of our switches is controlled systematically during assembly operations and on final completion. All our products are subjected to a final inspection, either at 100% on important characteristics, or according to the statistical sampling rules of French standards X 06-222 and X 06-023. The quality levels applied, for normal use such as defined in previous paragraphs are for the following defects, according to the standards :

- critical fault : NQA : 0.40
- major fault : NQA : 1
- minor fault : NQA : 2.5

At the customer's request, and for certain ranges of our products which must meet specific needs expressed in the specifications, it is always possible to adapt or create an inspection specification of a standard product.

## Standards - Approvals

Our switches are designed according to international recommendations (IEC), American standards (UL) and/or European standards (EN).

Proof of compliance with these standards and recommendations is demonstrated by:

- the manufacturer's declaration of conformity (drafted in accordance with the ISO/IEC 22 guidelines), or
- approval granted directly by an accredited body, or by application of the CCA (Cenelec Certification Agreement).

More detailed information on the approval for a particular type of microswitch can be obtained on request.

### The 83170 switch as an example

An 83 170 4 switch marked with the symbols for the European (according to CCA/MC12) and American approvals it holds.

## Rules and regulations

### EC directives

Our switches are compatible with European Community technical directive (Low Voltage) 73/23 and can be used within the framework of Machinery directive 83/392.

### Environmental protection

The modern concept of protection of the environment is an integral part of the manufacture of our switches, from product design through to packaging.

# Limit Switches – Technical Guide

## Introduction

What is meant by a "position detector" is any device which needs to be operated by a member which exerts a physical force, in view of :

- either the form which its operating device takes
- or the considerable force needed to operate it

The distinguishing features of position detectors are :

- their high electrical performance capability
- their excellent resistance to accidental impact
- good protection against splashed or dripping water
- a wide range of operating devices to allow the detectors to be adapted to a vast variety of mechanisms

## Construction

Our detectors are designed to conform to international IEC recommendations and/or European standards (EN). Proof that a detector conforms to these standards or recommendations takes the form of a conformity declaration made by the manufacturer (drafted as indicated in guidance document ISO/IEC 22 - EN 450-14). Characteristics in line with the general requirements of standards NFC 63140, IEC 947.5.1 and EN 60947.5.1.

- Leakage paths and air gaps : IEC 664.1 - NFC 20-040.

Our position detectors which comply with IEC 947.5.1 can be fitted to machine-tools and industrial machines complying with NFC 79130, IEC 204.1, EN60204 or VDE 113.

## Electrical characteristics

### Assigned working current (Ie):

- the current level adopted as a basis for the operating conditions quoted for a detector, and for the life tests on it.

### Thermal rating (Ith):

- the current the microswitch will withstand when not being operated electrically, for a temperature rise of not more than 60 °C.

### Assigned insulation voltage (Ui):

- the voltage adopted as a reference for the dielectric tests and leakage paths. It must be equal to or greater than the assigned working voltage.

### Categories of use (IEC 947.5.1):

- AC 15 for operating AC solenoids and electromagnets
- DC 13 for operating DC solenoids and electromagnets

### Contact element designation

#### (IEC 947.5.1):

- a letter and number which define the use category and the assigned working voltage and current  
For example, A 300 means : in category AC 15, a maximum working voltage of 300 V and 6 A at 120 V or 3 A at 240 V.

### Contact block electrical wiring diagram

Form Za

Both contacts have the same polarity

Form Zb

The 2 contacts are electrically isolated

### Positive break contact operation (IEC 947-5-1, chapter 3)

For contacts used in safety applications, limit switches, emergency stop devices, assurance that opening has occurred is essential (see IEC 204, EN60204). After each attempt, contact opening is checked by an impulse voltage test (2500 V).

### Contact element :

- Snap action contact

This is characterized by tripping points and release points which cannot be confused. The speed at which the control devices moves is independent from the speed of the control device. This feature makes it possible to obtain satisfactory electrical performance even where the control device is moving at low speed.

A : Total travel (TT) of the control device  
B : Pre-travel (PT) until the contact element opens  
C : Release travel until the contact element closes  
D : B-C = Differential travel  
F : Travel required to reach the positive opening point (POT)

## Rules and regulations

### EC Directives

Our detectors conform to the EC Low Voltage Technical Directive 73/23/EEC and can be used in accordance with the specifications of the Machinery Directive 89/392/EEC.

## Environmental conditions

### Temperature limits

When they are used in the temperature range quoted, the mechanical and electrical characteristics of our position detectors will remain substantially unchanged. If you intend to use them outside this range, please consult us.

### Protective treatment

The treatment given to our position detectors is suitable in the vast majority of applications.

Parts made of steel are zinc-coated or painted according to their mechanical function. Further information is available on request. This treatment allows our detectors to be used under the following temperature and humidity conditions :

T °C	20	40	50
Relative humidity %	95	80	50

This treatment may thus be suitable for applications in tropical or equatorial climates where the equipment concerned is in an interior location sheltered from direct exposure to atmospheric conditions.

Other types of reinforced protection are possible for resistance to very severe environments. Please enquire.

### Mounting requirements

Electric shock protection.

The user should observe the mounting instructions relating to the mode of protection against electric shocks defined in the IEC 536.1, EN 60204.1 - NFC 20030 standards :

Class I : earth circuit link. Protection via differential circuit-breaker.

Class II : double insulation.

Class III : very low safety voltage.

### Screw tightening torque :

1 : Actuator tightening	1.2 to 1.5 Nm	
	Plastic body	Metal body
2 : Head fixing screw	0.7 to 0.8 Nm	0.8 to 1 Nm
3 : Body fixing screw	0.7 to 0.8 Nm	0.8 to 1 Nm
4 : Fixing screw	2 to 2.5 Nm	

### Adjustment of rotary heads with momentary action to right and left :

For series 83 850, 83 851, 83 861, 83 854, 83 855, 83 863

### Degree of protection

Under the IEC 529 or NFC 20010 classification scheme, standards employ an IP code to define the degree or class of protection which a position detector provides against access to live components and against the entry of solid foreign bodies and the entry of water.

1 <sup>st</sup> numeral		
Protection equipment provides against the entry of solid foreign bodies		Protection for persons against access to dangerous parts
0	(not protected)	(not protected)
4	diameter 1 mm	1 mm Ø wire
5	protected against dust	1 mm Ø wire
6	sealed against dust	1 mm Ø wire

2 <sup>nd</sup> numeral		
Protection equipment provides against the entry of water		
0	(not protected)	6 high-pressure hosed water
4	splashed water	7 temporary immersion
5	hosed water	8 prolonged immersion

# Mechanical characteristics

## Terminology

### Forces - Positions - Travel

- Positive opening action : see IEC 947-5-1 chapter 3, § 2.2

**N.B. :** The max. and min. values quoted for each detector (min. operating force, max. total travel, etc.) are the maxima and minima users must allow for if they are to use our products under the proper conditions.

Products and specifications subject to change without notice.

Order/Technical Support – Tel: (800) 677-5311 / FAX: (800) 677-3865 / [www.crouzet-usa.com](http://www.crouzet-usa.com)

# Key Operated Safety Limit Switches – Technical Guide

## Standards

Extract from standards EN 292-2 and EN 1088.  
Moving guards to prevent risks created by moving (and therefore dangerous) parts must be used in conjunction with locking devices or interlocks with guard locking.

**Interlocks with guard locking must be used on machines with inertia.**

An interlock with guard locking must be used if the stopping time is greater than the time required for a person to reach the danger zone. This mechanism will delay unlocking the moving guard until the dangerous movement has actually stopped.

## Areas of application

Key-operated safety interlock switches have been designed specifically for protecting operators working on dangerous machines. They can be used to lock or unlock moving guards on industrial machines, and meet the requirements of standards EN 292-2, EN 294, EN 1088 and EN 60204-1.

Key-operated safety interlock switches are mainly used in applications which form part of the machine operating process. They are used to stop any dangerous movement whenever the moving guard system is open.

## Examples of application

### Monitoring of immediate access moving guards

- ① Level 3 for 1 or 2 moving cover(s): KNA3-XS + 83 893 001

Emergency stop and moving cover controlled by two channels on terminals 41-42 (data contact) to a PLC output.

### Monitoring of immediate access rotary guards

- Level 3 for 1 moving cover: KNA3-XS + 83 893 3

## Machine control circuits

The use of safety interlock switches in conjunction with XS and RS safety relays creates control circuits conforming to EN 954-1.

## Operating principle

The start circuit is only closed after the key has been inserted fully and is used to close the NC contacts. Removing the key once the moving cover is open causes the positive action opening of the NC contact(s).

The opening of the moving guard can be:

### Immediate

Machines without inertia. Machines with a stopping time which is less than the time taken to access the danger zone.

### Delayed

Machines with a stopping time which is greater than the time taken to access the danger zone.

### Monitoring of delayed access moving guards

- ② Level 3 for 1 moving cover: KZR3-RS + 83 893 201
- ③ Level 4 for 1 moving cover: KNA3-RS + KSW2-RS + 83 893 201

Products and specifications subject to change without notice.

Order/Technical Support – Tel: (800) 677-5311 / FAX: (800) 677-3865 / www.crouzet-usa.com

---

## Key-operated safety interlock switch, plastic

### Without key locking

Switches with plastic body for use on light machinery, **without inertia**. For use in unstable environments where there is a risk of the guard opening accidentally (due to vibrations, if the guard is positioned at an angle, bouncing of the guard, etc). **The guard is kept closed by adding a door stopping mechanism.**

### With interlocking and locking of the key using an electromagnet

Devices in plastic cases for use on machines **with inertia**, or which require controlled opening of the guard. The moving guard is locked by removing the voltage, or by applying voltage to the electromagnet. A special tool can be used to unlock the guard manually, to ensure the safety of personnel carrying out maintenance operations on the machine, or if there is a malfunction.

---

## Key-operated safety interlock switch, metal

### Without key locking

Switches with metal body for use on machines **without inertia** in a **stable environment** where there is no risk of the guard opening accidentally (due to vibrations, if the guard is positioned at an angle, bouncing of the guard, etc)

### With interlocking and locking of the key using an electromagnet

Devices in metal cases for use on machines **without inertia**, or which require controlled opening of the guard. The moving guard is locked by removing the voltage. A key-operated lock can be used to unlock the guard manually, to ensure the safety of personnel carrying out maintenance operations on the machine, or if there is a malfunction. These devices are fitted with 2 LEDs: one indicates the opening/closing of the guard, the other whether it is locked.

---

## Safety switch for hinged guards

### With angular or rotary movement head

Switches with plastic body and angled lever or rotary shaft. They are designed for use on small industrial machines with compact doors, covers or **rotating housings**. These ensure the safety of the operator by stopping the dangerous movement immediately the lever or rotary shaft reaches an angle of 5°. These devices provide a solution for monitoring **rotary guards** with a small opening radius on machines without inertia. They are particularly suitable for adapting existing machines to meet applicable standards, as they can be mounted on covers which are already installed, including those mounted imprecisely. Mounting the switch increases the safety of the operator as it reduces the opening distance of the guard, and therefore the risk of reaching the danger zone.

## Operating principles

Figure 1 illustrates the principle of an Inductive Proximity Detector (I.P.D.)

The I.P.D. signals the presence of a metal object "M" close to its sensing face.

It contains a high-frequency oscillator "O" whose oscillating circuit coil "S", located in a magnetic ferrite open on one side, forms the sensing face. An alternating magnetic field is created in front of this. On entering this field, any metal part "M" causes eddy currents, thus reducing the amplitude of oscillation. This reduced amplitude is converted by the pulse shaper "D" into an output signal amplified by "V".

## Operating characteristics:

**Sensing distance S:** Distance at which the target determines a change in the status of the output signal, as it approaches the sensing face.

**Nominal sensing distance Sn:** Conventional value used to describe the device. Does not take account of dispersion (due to manufacturing, temperature, voltage).

**Actual sensing distance Sr:** Actual value measured from constant parameters (temperature, voltage, installation conditions etc), which must be between 90 and 110 % of the nominal sensing distance Sn.  
 $0.9 S_n < S_r < 1.1 S_n$

**Usable sensing distance Su:** Value measured within the specified limits of the temperature and voltage zones, which must be between 81% and 121% of the nominal sensing distance Sn.  
 $0.81 S_n < S_u < 1.21 S_n$

**Operating sensing distance Sa:** Distance within which the detector will operate correctly in specified conditions.  
 $0 < S_a < 0.81 S_n$

**Repeatability R:** Value of variation in the actual sensing distance Sr in specified conditions (time, temperature, voltage).

**Differential travel H:** Distance between the pick-up point when the target approaches the detector and the drop-out point when the target moves away.

**Method of measuring sensing distances:** according to standard EN 50010.

**Lateral approach and axial approach:**

## Electrical characteristics:

**Normally open function (NO):** Corresponds to a detector whose output allows the current to pass through when the target is detected.

**Normally closed function (NC):** Corresponds to a detector whose output blocks the current when the target is detected.

Equivalent circuit diagram

**Voltage drop Ud:** Voltage measured across the active output of the detector in closed state under its nominal operating current (load current Ia).

**Load current Ia:** Maximum current with which the detector permanently operates correctly.

**Leakage current Ir:** Current which continues to circulate in the load and in the output circuit when the detector is in the open state.

**Minimum operating current Im:** Current necessary to maintain conduction of the switching element.

**Time delay before availability Tv:** Time necessary for the sensor output signal to operate when powering up.

**Switching frequency F:** Number of operating cycles carried out during a specified time. It is measured according to the method shown below (Standard EN 50010 NFC 63075).

m : width of the target.

**Operating voltage Un:** Voltage range within which the detector maintains its specified characteristics.

**Ripple voltage:** Ratio between the amplitude of an alternating voltage (peak to peak) and the direct voltage on which it is superimposed.

## Detection characteristic curves - cylindrical CENELEC types

### Screened versions

- Approach detection curve
- Withdrawal detection curve (side detection)
- Sn Nominal sensing distance

### Non-screened versions

- Approach detection curve
- Withdrawal detection curve (side detection)
- Sn Nominal sensing distance

### SCREENED IPD

Ø mm	Dimensions (mm) of sensed plate of A37 steel	Nominal sensing distance Sn (mm)
Ø4	5 x 5 x 1	0.....0.8
M5	5 x 5 x 1	0.....0.8
Ø6.5	8 x 8 x 1	0.....1.5
M8	8 x 8 x 1	0.....1.5
M8 ext	8 x 8 x 1	0.....3
M12	12 x 12 x 1	0.....2
M12 ext	12 x 12 x 1	0.....6
M18	18 x 18 x 1	0.....5
M18 ext	18 x 18 x 1	0.....12
M30	30 x 30 x 1	0.....10

### NON-SCREENED IPD

Ø mm	Dimensions (mm) of sensed plate of A37 steel	Nominal sensing distance Sn (mm)
Ø6.5	8 x 8 x 1	0.....2.5
M8	8 x 8 x 1	0.....2.5
M12	12 x 12 x 1	0.....4
M18	18 x 18 x 1	0.....8
M30	30 x 30 x 1	0.....15

### Notes

When materials other than steel are detected, the following correction factors must be applied :

Material	Correction factor
A37 mild steel	1
316 stainless steel	0.85
Brass	0.40
Aluminium	0.35
Copper	0.30

Products and specifications subject to change without notice.

## Electrical connection

### 3-wire DC

PNP output: load connected to negative supply

NPN output: load connected to positive supply

### 2-wire AC

## Installation

"**Screened**" sensors can be inset in surrounding metal rising flush with the sensing face. With "**non-screened**" versions, check that there is no metal in the immediate vicinity of the sensing face. European standards define the minimum distance which must be allowed between two sensors and/or between sensors and surrounding metal articles so that the sensors will not be affected.

The figures given below (which are in line with European standards) are for mounting in mild steel (A 37) with non-restrictive operating conditions. Where there are multiple constraints (deposits, temperature, etc) additional correcting factors will need to be applied.

### Screened

### Non-screened

The sensing face of the sensor must not be positioned below the surface of the metal.

Where two sensors are installed facing one another, a gap of  $10 \times S_n$  must be left between the two sensing faces.

$S_n$ : Nominal sensing distance  
 $d1$ : diameter of IPD

## Mechanical installation advice

### Protection:

- Protect the cable against sharp objects or excessive heat.
- Do not exert a pulling force of more than 5 kg on the cable.
- The detectors are unable to withstand severe mechanical impact. The bracket must be sufficiently rigid to resist shock and vibration.
- Avoid using the detectors in a corrosive environment such as near strong acids, etc. (e.g. Nitric Acid).
- When a plastic detector is used in a chemical environment it is advisable to first verify the plastic's resistance to the chemical.

## Electrical installation advice

### Power supply:

- Opposite is an example of a DC power supply for detectors using smoothing. To ensure that the resulting voltage is less than the maximum operating voltage of the detector, use a capacitor "C" to remove spikes and ripples greater than  $\pm 10\%$ . Ideally, use a transformer with a secondary voltage less than your required voltage.

Eg. 17.5 VAC from the secondary of the transformer to obtain less than 24 VDC.

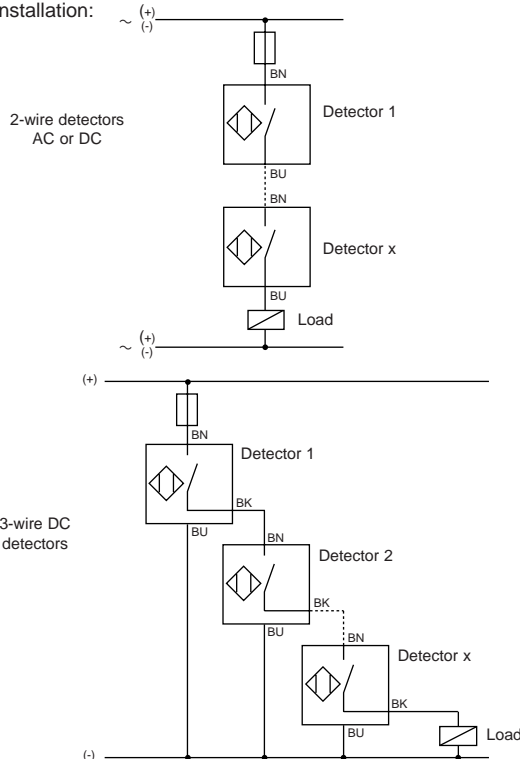

### Connection:

- Limit the length of the cables to 100 m and the capacitance of the line to 0.1  $\mu\text{F}$ . Also separate detector cables and power cables as far as possible.

### Connecting more than one sensor:

#### Series installation:

- It is possible to connect detectors in series:
  - Ensure that the voltage at the terminals of each sensor is less than or equal to the minimum operating voltage (in off-state).
  - In on-state, check that there is sufficient voltage available to activate the load.

This connection method is not possible if multivoltage sensors are used.

- With this connection method, add the voltage drop of each detector together and deduct from the supply voltage to ensure there is sufficient voltage to activate the load.

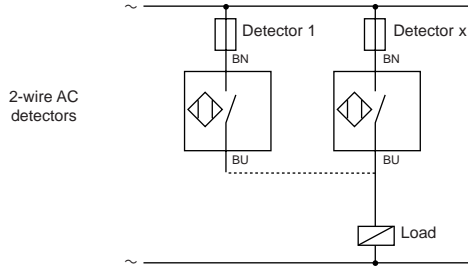

**Note:** detector 1 carries all the current for the additional detectors.

# Inductive Proximity Detectors – Technical Guide

Parallel installation:

2-wire AC detectors

- With this type of installation the sum of the off-state leakage currents must be less than the current needed to drive the load.

**Note:** this installation should only be used with detectors which are activated one at a time.

3-wire DC detectors

- It is possible to connect 3-wire detectors in this configuration without any problems.

## Examples of applications

### ■ Part positioning

### ■ Parts recognition - Metal detection

# Capacitive Proximity Detectors – Technical Guide

Capacitive proximity detectors consist of an RC-oscillator with a special multi-part sensing electrode. The electrode and the oscillator circuit have a tube connected with earth potential for lateral screening. This enables flush-mounting of the sensor in metal, since the electrical field is only present in front of the sensing electrode. This field is the active zone of the sensor.

When the conductive material is removed from the active zone, the oscillator is undamped and the oscillation amplitude decreases. The oscillator voltage amplifier and the sensor sensitivity can be modified using the built-in potentiometer.

The middle electrode and built-in reclosing function provide excellent compensation in conditions of humidity, dust or freezing. A special circuit automatically compensates for these influences. The preset sensing range remains practically constant. The electrode and compensating circuitry of the capacitive sensors are unique in design, and provide operating performances far superior to other capacitive sensors.

A indicates SENSOR ELECTRODE  
B and C indicates COMPENSATION ELECTRODES

## Applications

Capacitive sensors can be used to limit the level in tanks and containers. These may contain fluids, pulverised or granulated materials such as PVC, powder, dyes, flour, sugar, powdered milk, etc. These sensors can also be used as limit switches for checking and regulating machinery settings, even if the materials are not made of metal (as in conveyor belt positioning and material stacking), for checking drive belts and paper reels for sag and tear. Additionally, they can be used as detectors for counting metal and non-metal components.

Areas of application for capacitive sensors.

## Screened configuration

Sensors with a straight line electrical field.

These units can sense solids (plates, components, PCBs, hybrids, cartons, bottles, plastic blocks and stacks of paper for example) at a distance or liquids through a separating wall (glass or plastic up to a maximum of 4 mm thick).

## Non-screened configuration

Sensors with a spherical electrical field. These units are designed to touch the product, both bulk solids and liquids (granulate, sugar, flour, corn, sand or oil and water) with their active surface.

## Sensing range

The data was obtained using a 1 mm thick square steel plate (steel 37) as an actuator, with a side length equal to  $3 \times S_n$ . The steel plate was grounded. The ambient temperature was 25°C. The maximum sensing range was defined as the nominal sensing range with a tolerance of  $\pm 10\%$ .

The sensing range depends on the shape, size and type of object concerned. If the plate is made of different material or has a smaller diameter, the sensing distance will be reduced.

## Size correction factor

For objects which are not flat and which are smaller than the active sensor surface, the following sensing ranges are obtained depending on the scanned object F/FO surface, where F is the front sensor surface (active surface) and FO the front surface of the object being scanned. The figures in the table below refer to flush-mounting sensors and objects in the form of long thin rods.

Scanned object F/FO surface	Nominal sensing range $S_n$ in mm
1.50	100
1.24	100
0.80	100
0.61	100
0.31	94
0.20	85
0.15	82.5
0.05	67.5
0.03	57.5

The diagram below shows the data from the table in graphic form.

# Capacitive Proximity Detectors – Technical Guide

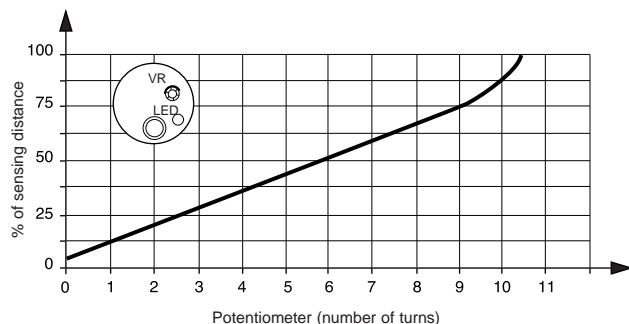

## Material correction factor

If the object in question is not metal or water, the sensing range is reduced. The reduction factors for the different materials are shown in the table below.

Material	Sensing range compared to a surface of water			
	20 mm	10 mm	15 mm	10 mm
Hand	20	10	15	10
Square steel plate (100 x 100 x 1)	20	10	15	10
Round steel plate (30 Ø x 1)	11	6	4	2
Stone (marble)	18	8.5	8	5
Wood	13	5	5	3
Glass	12	4	6	2.5
Carbon	19	9	12	9
PVC-block (30x30x5)	8	4	1.5	-
Lupolen granulate 1800 H	8	3	2.5	Head approx. 2 mm immersed
Polystyrene 454 H	9.5	3	4	1
Hostalen GC 8960 H	8.2	1.5	2	Head approx. 1 mm immersed
Vestyron 719-50	7.9	1.2	2	Head approx. 3 mm immersed
Hostyren	8.2	3	3	Head approx. 1 mm immersed
BM scrap material (Z)	6.7	1.4	1	Head surrounded
Hostalen GC coarse powder	8	2	1.5	Head approx. 3 mm immersed
Lupolen fine granulate	7.7	1.5	1	Head approx. 3 mm immersed
Hostaform C	9.8	3.5	4	1
Hostyren (polystyrene)	7.4	2	2.5	Head approx. 2 mm immersed
Hostalit S	7.5	2	1.5	Head surrounded
Hostalit PP	5	1.5	1.5	Head surrounded
Hostalit E	7.2	1	1	Head approx. 4 mm immersed
Styropor unfoamed	8.1	3	3	0.5
Styropor Ø 1.5	-	-	-	-
Antimony-trioxyde	6.2	0.9	2.5	Direct contact
Oil	9	3	5	3
Maximum sensing range critical point		55	110	
Conditions : Tu = 25 °C ; VA = 24 Vdc In each case, the measurements were made from a level surface.				

## Sensitivity adjustment

Capacitive proximity detectors are fitted with a 14-turn potentiometer. The potentiometer must be adjusted to suit most applications. Turn in a clockwise direction to increase sensitivity. From the original setting of 0.7-0.8 x Sn (Sn = nominal sensing range), the nominal sensing range is reached after 2-3 turns. This leads to non-linearity of the curve and hypersensitivity, which may cause the sensor to lock. If this occurs, decrease sensitivity by turning the potentiometer 2-3 turns anticlockwise.

## Temperature

Capacitive proximity detectors operate within a temperature range of -5°C to +70°C. The maximum sensing distance deviation is ± 10 % when the adjusted sensing distance at +20°C is no greater than the nominal specified distance (taking the material reduction factors into consideration).

## Example of setting procedure

A liquid (water, for example) is to be scanned through a separating wall by a sensor. The separating wall is made of glass or plastic, with a maximum thickness of 4 mm. The thickness in mm should be between 10 and 20% of the adjusted sensing distance, but always less than 4 mm.

The face (active surface) of the sensor is bonded to the glass or plastic wall. The vessel is filled with water until approx. 75% of the active surface of the sensor is covered. Turn the sensor potentiometer anti-clockwise (to reduce the sensitivity) until the LEDs and the output signal turn off. Turn the potentiometer clockwise (to increase the sensitivity) until the LEDs and the output signal light up. Using the calibration process described ensures that the sensor does not detect the wall or the water residue on the wall. It only operates once the liquid has reached the 75% level described above.

# Capacitive Proximity Detectors – Technical Guide

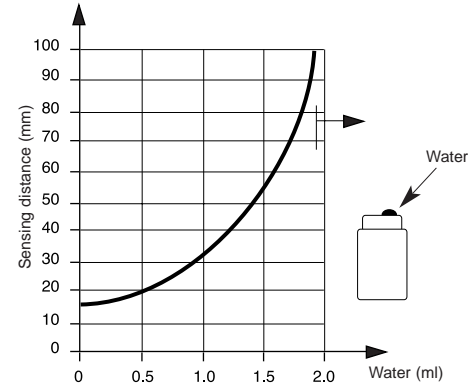

## Installation conditions

The presence of surrounding objects may affect capacitive proximity detectors. These objects may reduce sensing capacity or may themselves be detected. It is necessary to maintain a standard distance between a capacitive proximity detector and the surrounding objects when installing this type of detector.

## Effects of water droplets on the sensing face

The curves below illustrate the modifications to the operating range which may be caused by the presence of water droplets on the sensing face of a capacitive proximity detector. If the quantity of water droplets is 0.2 ml (approx. 2-3 drops), the operating range is extended by around 20 %; if the water droplets cover the entire sensing face, the operating range is extended by more than 300 %.

## Warning

The presence of frost, ice, moisture, oil or dust on the active surface will prevent reliable operation.

The detection of liquids or powders attached to the walls of non-metallic vessels will prevent reliable operation.

Connecting a DC capacitive proximity detector to a high-load current (current higher than 200 mA) (for electric motors and electromagnetic contacts) will cause the output transistor to malfunction. The detector must be connected via a relay.
