- Member of the Texas Instruments Widebus $+^{T M}$ Family
- Operates From 1.65 V to 3.6 V
- Inputs Accept Voltages to 5.5 V
- Max $t_{p d}$ of 4.8 ns at 3.3 V
- Input and Output Ports Have Equivalent 26- $\Omega$ Series Resistors, So No External Resistors Are Required
- Typical $V_{\text {OLP }}$ (Output Ground Bounce) $<0.8 \mathrm{~V}$ at $\mathrm{V}_{\mathrm{CC}}=3.3 \mathrm{~V}, \mathrm{~T}_{\mathrm{A}}=25^{\circ} \mathrm{C}$
- Typical $\mathrm{V}_{\mathrm{OHV}}$ (Output $\mathrm{V}_{\mathrm{OH}}$ Undershoot) $>2 \mathrm{~V}$ at $\mathrm{V}_{\mathrm{CC}}=3.3 \mathrm{~V}, \mathrm{~T}_{\mathrm{A}}=25^{\circ} \mathrm{C}$
- $\mathrm{I}_{\text {off }}$ Supports Partial-Power-Down Mode Operation
- Supports Mixed-Mode Signal Operation on All Ports (5-V Input/Output Voltage With $3.3-\mathrm{V} \mathrm{V}_{\mathrm{CC}}$ )
- Other Products to Consider: SN74LVC32245, SN74LVCH32245A
- Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II
- ESD Protection Exceeds JESD 22
- 2000-V Human-Body Model (A114-A)
- 200-V Machine Model (A115-A)
- 1000-V Charged-Device Model (C101)

## description/ordering information

This 32-bit (quad-octal) noninverting bus transceiver is designed for $1.65-\mathrm{V}$ to $3.6-\mathrm{V} \mathrm{V}_{\mathrm{CC}}$ operation. The SN74LVC32245A is designed for asynchronous communication between data buses. The control-function implementation minimizes external timing requirements.

This device can be used as four 8-bit transceivers, two 16-bit transceivers, or one 32-bit transceiver. It allows data transmission from the $A$ bus to the $B$ bus or from the $B$ bus to the $A$ bus, depending on the logic level at the direction-control (DIR) input. The output-enable $(\overline{\mathrm{OE}})$ input can be used to disable the device so that the buses are effectively isolated.
Inputs can be driven from either 3.3-V or 5-V devices. This feature allows the use of these devices as translators in a mixed $3.3-\mathrm{V} / 5-\mathrm{V}$ system environment.

The outputs, which are designed to sink up to 12 mA , include equivalent $26-\Omega$ resistors to reduce overshoot and undershoot.

This device is fully specified for partial-power-down applications using $\mathrm{I}_{\text {off }}$. The $\mathrm{I}_{\text {off }}$ circuitry disables the outputs, preventing damaging current backflow through the device when it is powered down.
To ensure the high-impedance state during power up or power down, $\overline{\mathrm{OE}}$ should be tied to $\mathrm{V}_{\mathrm{CC}}$ through a pullup resistor; the minimum value of the resistor is determined by the current-sinking capability of the driver.

-0.5 V to 6.5 V
Voltage range applied to any output in the high or low state, $\mathrm{V}_{\mathrm{O}}$
(see Notes 1 and 2) -0.5 V to $\mathrm{V}_{\mathrm{CC}}+0.5 \mathrm{~V}$

Continuous output current, IO . .................................................................... $\pm 50 \mathrm{~mA}$

Package thermal impedance, $\theta_{\mathrm{JA}}$ (see Note 3): GKE/ZKE package . ............................... $40^{\circ} \mathrm{C} / \mathrm{W}$

$\dagger$ Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
NOTES: 1. The input negative-voltage and output voltage ratings may be exceeded if the input and output current ratings are observed.
2. The value of $\mathrm{V}_{\mathrm{CC}}$ is provided in the recommended operating conditions table.
3. The package thermal impedance is calculated in accordance with JESD 51-7.

## recommended operating conditions (see Note 4)

## PARAMETER MEASUREMENT INFORMATION

NOTES: A. $\mathrm{C}_{\mathrm{L}}$ includes probe and jig capacitance.
B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control.

Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
C. All input pulses are supplied by generators having the following characteristics: $\mathrm{PRR} \leq 10 \mathrm{MHz}, \mathrm{Z}_{\mathrm{O}}=50 \Omega$.
D. The outputs are measured one at a time with one transition per measurement.
E. tPLZ and tPHZ are the same as $\mathrm{t}_{\text {dis }}$.
F. tpZL and tpZH are the same as ten.
G. $\mathrm{tPLH}^{\text {and }} \mathrm{tPHL}$ are the same as $\mathrm{t}_{\mathrm{pd}}$.
H. All parameters and waveforms are not applicable to all devices.

## PACKAGING INFORMATION

| Orderable Device | Status <br> $(1)$ | Package TypePackage <br> Drawing | Pins | Package <br> Qty | Eco Plan <br> $(2)$ | Lead/Ball Finish <br> $(6)$ | MSL Peak Temp <br> $(3)$ | Op Temp ( ${ }^{\circ}$ C) | Device Marking |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $(4 / 5)$ |  |  |  |  |  |  |  |  |  |

${ }^{(1)}$ The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.
${ }^{(2)}$ RoHS: TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed $0.1 \%$ by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".
RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption
Green: TI defines "Green" to mean the content of Chlorine (CI) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.
${ }^{(3)}$ MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.
${ }^{(4)}$ There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.
${ }^{(5)}$ Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device
${ }^{(6)}$ Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width
