## Description

The APX823/APX824/APX825A family of supervisors provides circuit initialization and timing supervision, primarily for DSP and processor-based systems.

During power-on, RESET is asserted when supply voltage $V_{C C}$ becomes higher than 1.1 V . Thereafter, the supply voltage supervisor monitors $\mathrm{V}_{\mathrm{CC}}$ and keeps $\overline{\text { RESET }}$ active as long as $\mathrm{V}_{\mathrm{CC}}$ remains below the threshold voltage $\underline{\mathrm{V}}_{\mathrm{TH}}$. An internal timer delays the return of the output to the inactive state (high) to ensure proper system reset. The delay time, $\mathrm{t}_{\mathrm{d}}$ starts after $\mathrm{V}_{\mathrm{CC}}$ has risen above the threshold voltage $\mathrm{V}_{\mathrm{TH}}$.When the supply voltage drops below the threshold voltage $\underline{V}_{T H}$-, the output becomes active (low) again. No external components are required. All the devices of this family have a fixed-sense threshold voltage $\underline{\mathrm{V}}_{\underline{T H}}$ - set by an internal voltage divider.
The APX823/APX825A devices incorporate a manual reset input, $\overline{M R}$. A low level at $\overline{M R}$ causes $\overline{\text { RESET }}$ to become active. The APX824/APX825A devices include a high-level output RESET. APX823/APX824/APX825A have a watchdog timer that is periodically triggered by a positive or negative transition at WDI. When the supervising system fails to retrigger the watchdog circuit within the time-out interval, ttout, $\overline{R E S E T}$ becomes active for the time period td. This event also reinitializes the watchdog timer. Leaving WDI unconnected disables the watchdog.
In applications where the input to the WDI pin may be active (transitioning high and low) when the APX823/APX824/APX8
25A asserting RESET the APX823/APX824/APX825A does not return to a non-reset state when the input voltage is above Vt . The product spectrum is designed for supply voltage of $2.5 \mathrm{~V}, 3 \mathrm{~V}, 3.3 \mathrm{~V}$ and 5 V . The circuits are available in a SOT25 and SOT26 packages. The APX823/APX824/APX825A devices are characterized for operation over a temperature range of $-40^{\circ} \mathrm{C}$ to $105^{\circ} \mathrm{C}$.

## Features

- Power-on reset generator with fixed delay time of 200 ms Typ
- Manual reset input (APX823/APX825A)
- Reset output available in active-low
(APX823/APX824/APX825A), active-high (APX824/APX825A)
- Supply voltage supervision range $2.5 \mathrm{~V}, 3 \mathrm{~V}, 3.3 \mathrm{~V}, 5 \mathrm{~V}$
- Watchdog timer
- Supply current of $30 \mu \mathrm{~A}$ (Typ.)
- Temperature range: $-40^{\circ} \mathrm{C}$ to $85^{\circ} \mathrm{C}$
- SOT25 and SOT26: Available in "Green" Molding Compound (No Br, Sb)
- Lead Free Finish/RoHS Compliant (Note 1)

Note: 1. EU Directive 2002/95/EC (RoHS). All applicable RoHS exemptions applied, see EU Directive 2002/95/EC Annex Notes.

## Typical Application Circuit

Pin Descriptions

| Pin Name | Description |
| :---: | :--- |
| GND | Ground |
| $\overline{\mathrm{RESET}}$ |  |
| $($ RESET $)$ |  | Reset output pin

## Functional Block Diagram

## Absolute Maximum Ratings (Over operating ambient temperature range, unless otherwise noted)*

| Symbol | Parameter |  |  | Rating | Unit |
| :---: | :---: | :---: | :---: | :---: | :---: |

* Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

## Recommended Operating Conditions

| Symbol | Parameter | Min | Max | Unit |
| :---: | :--- | :---: | :---: | :---: |
| $\mathrm{V}_{\mathrm{CC}}$ | Supply Voltage | 1.1 | 5.5 | V |
| $\mathrm{~V}_{\mathrm{IN}}$ | Input Voltage | 0 | $\left(\mathrm{~V}_{\mathrm{CC}}+0.3\right)$ | V |
| $\mathrm{V}_{\mathrm{IH}}$ | High-level Input Voltage at $\overline{\mathrm{MR}}$ and WDI | $0.7 \times \mathrm{V}_{\mathrm{CC}}$ | - | V |
| $\mathrm{V}_{\mathrm{IL}}$ | Low-level Voltage | - | $0.3 \times \mathrm{V}_{\mathrm{CC}}$ | V |
| $\Delta \mathrm{t} / \Delta \mathrm{V}$ | Input Transition Rise and Fall Rate at $\overline{\mathrm{MR}}$ or WDI | - | 100 | $\mathrm{~ns} / \mathrm{V}$ |
| $\mathrm{T}_{\mathrm{A}}$ | Operating Ambient Temperature Range | -40 | 85 | ${ }^{\circ} \mathrm{C}$ |
| $\mathrm{T}_{\mathrm{R}}$ | $\mathrm{V}_{\mathrm{CC}}$ Rising Time $\left(\mathrm{V}_{\mathrm{CC}}=0 \sim \mathrm{VT}\right)$ | - | 100 | $\mathrm{~V} / \mathrm{uS}$ |

Diodes Incorporated and its subsidiaries reserve the right to make modifications, enhancements, improvements, corrections or other changes without further notice to this document and any product described herein. Diodes Incorporated does not assume any liability arising out of the application or use of this document or any product described herein; neither does Diodes Incorporated convey any license under its patent or trademark rights, nor the rights of others. Any Customer or user of this document or products described herein in such applications shall assume all risks of such use and will agree to hold Diodes Incorporated and all the companies whose products are represented on Diodes Incorporated website, harmless against all damages.

Diodes Incorporated does not warrant or accept any liability whatsoever in respect of any products purchased through unauthorized sales channel.
Should Customers purchase or use Diodes Incorporated products for any unintended or unauthorized application, Customers shall indemnify and hold Diodes Incorporated and its representatives harmless against all claims, damages, expenses, and attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized application.

Products described herein may be covered by one or more United States, international or foreign patents pending. Product names and markings noted herein may also be covered by one or more United States, international or foreign trademarks.

## LIFE SUPPORT

Diodes Incorporated products are specifically not authorized for use as critical components in life support devices or systems without the express written approval of the Chief Executive Officer of Diodes Incorporated. As used herein:
A. Life support devices or systems are devices or systems which:

1. are intended to implant into the body, or
2. support or sustain life and whose failure to perform when properly used in accordance with instructions for use provided in the labeling can be reasonably expected to result in significant injury to the user.
B. A critical component is any component in a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or to affect its safety or effectiveness.

Customers represent that they have all necessary expertise in the safety and regulatory ramifications of their life support devices or systems, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of Diodes Incorporated products in such safety-critical, life support devices or systems, notwithstanding any devices- or systems-related information or support that may be provided by Diodes Incorporated. Further, Customers must fully indemnify Diodes Incorporated and its representatives against any damages arising out of the use of Diodes Incorporated products in such safety-critical, life support devices or systems.
