SN75174 Quadruple Differential Line Driver

1 Features

- Meets or exceeds the requirements of ANSI standards EIA/TIA-422-B and RS-485 and ITU recommendation V.11.
- Designed for multipoint transmission on long bus lines in noisy environments
- 3-state outputs
- Common-mode output voltage range of –7V to 12V
- Active-high enable
- Thermal shutdown protection
- Positive- and negative-current limiting
- Operates from single 5V supply
- Low power requirements
- Functionally interchangeable with MC3487

2 Applications

- Chemical and gas sensors
- Field transmitters: temperature sensors and pressure sensors
- Motor drives: brushless DC and brushed DC
- Temperature sensors and controllers using modbus

3 Description

The SN75174 is a monolithic quadruple differential line driver with 3-state outputs. It is designed to meet the requirements of ANSI Standards EIA/TIA-422-B and RS-485 and ITU Recommendation V.11. The device is optimized for balanced multipoint bus transmission at rates up to 4 megabaud. Each driver features wide positive and negative common-mode output voltage ranges making it suitable for party-line applications in noisy environments.

The SN75174 provides positive- and negative-current limiting and thermal shutdown for protection from line fault conditions on the transmission bus line. Shutdown occurs at a junction temperature of approximately 150°C. This device offers optimum performance when used with the SN75173 or SN75175 quadruple differential line receivers.

The SN75174 is characterized for operation from 0°C to 70°C.

Package Information

PART NUMBER	PACKAGE(1)	PACKAGE SIZE(2)
SN75174	N (PDIP, 16)	19.3mm × 9.4mm
	DW (SOIC, 20)	12.8mm × 10.3mm

(1) For more information, see Section 11.
(2) The package size (length × width) is a nominal value and includes pins, where applicable.

5 Specifications

5.1 Absolute Maximum Ratings

over operating free-air temperature (unless otherwise noted)[1]

		MIN	MAX	UNIT
V_{CC} (see [2])	Supply voltage	-0.3	7	V
V_O	Output voltage range	–10	15	V
V_I	Input voltage	-0.3	5.5	V
P_D	Continuous total dissipation	See *Dissipation Rating* table		
T_A	Operating free-air temperature range	0	70	°C
T_{Lead}	Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds		260	°C
T_{stg}	Storage temperature range	–65	150	°C

(1) Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) All voltage values are with respect to the network ground terminal.

5.2 Dissipation Rating

PACKAGE	$T_A \le 25°C$ POWER RATING	DERATING FACTOR ABOVE $T_A = 25°C$	$T_A = 70°C$ POWER RATING
DW	1125 mW	9.0 mW/°C	720 mW
N	1150 mW	9.2 mW/°C	736 mW

5.3 Recommended Operating Conditions

	MIN	NOM	MAX	UNIT
Supply voltage, V_{CC}	4.75	5	5.25	V
High-level input voltage, V_{IH}	2			V
Low-level input voltage, V_{IL}			0.8	V
Common-mode output voltage, V_{OC}	–7		12	V
High-level output current, I_{OH}			–60	mA
Low-level output current, I_{OL}			60	mA
Operating free-air temperature, T_A	0		70	°C

Copyright © 2024 Texas Instruments Incorporated

5.4 Thermal Information

THERMAL METRIC[1]		N (PDIP)	DW	UNIT
		16 PINS	20 PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	60.6	66.8	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	48.1	34.4	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	40.6	39.7	°C/W
ψ_{JT}	Junction-to-top characterization parameter	27.5	8.9	°C/W
ψ_{JB}	Junction-to-board characterization parameter	40.3	39	°C/W
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance	n/a	n/a	°C/W

(1) For more information about traditional and new thermal metrics, see the Semiconductor and IC Package Thermal Metrics application report.

5.5 Electrical Characteristics

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

PARAMETER		TEST CONDITIONS		MIN	TYP (1)	MAX	UNIT
V_{IK}	Input clamp voltage	I_I = –18 mA				–1.5	V
V_{OH}	High-level output voltage	V_{IH} = 2V, I_{OH} = –33mA	V_{IL} = 0.8V,		3.7		V
V_{OL}	Low-level output voltage	V_{IH} = 2V, I_{OL} = 33mA	V_{IL} = 0.8V,		1.1		V
V_O	Output voltage	I_O = 0		0		6	V
$\|V_{OD1}\|$	Differential output voltage	I_O = 0		1.5	6	6	V
$\|V_{OD2}\|$	Differential output voltage	R_L = 100Ω,	See Figure 6-1	1/2 V_{OD1} or 2 (2)			V
		R_I = 54Ω,	See Figure 6-1	1.5	2.5	5	V
V_{OD3}	Differential output voltage	See (5)		1.5		5	V
$\Delta\|V_{OD}\|$	Change in magnitude of differential output voltage (3)					±0.2	V
V_{OC}	Common-mode output voltage (4)	R_L = 54Ω or 100Ω,	See Figure 6-1	-1		3	V
$\Delta\|V_{OC}\|$	Change in magnitude of common-mode output voltage (3)					±0.2	V
I_O	Output current with power off	V_{CC} = 0,	V_O = –7V to 12V			±100	µA
I_{OZ}	High-impedance-state output current	V_O = –7V to 12V				±100	µA
I_{IH}	High-level input current	V_I = 2.7V				20	µA
I_{IL}	Low-level input current	V_I = 0.5V				±360	µA
I_{OS}	Short-circuit output current	V_O = ±7V				±180	
		V_O = V_{CC}				180	mA
		V_O = 12V				500	
I_{CC}	Supply current (all drivers)	No load	Outputs enabled		38	60	mA
			Outputs disabled		18	40	

(1) All typical values are at V_{CC} = 5V and T_A = 25°C.
(2) The minimum V_{OD2} with a 100Ω load is either 1/2 V_{OD1} or 2V, whichever is greater.
(3) $\Delta|V_{OD}|$ and $\Delta|V_{OC}|$ are the changes in magnitude of V_{OD} and V_{OC}, respectively, that occur when the input is changed from a high level to a low level.
(4) In ANSI Standard EIA/TIA-422-B, V_{OC}, which is the average of the two output voltages with respect to ground, is called output offset voltage, V_{OS}.
(5) See EIA Standard RS-485.

5.6 Switching Characteristics

V_{CC} = 5V, T_A = 25°C

	PARAMETER	TEST CONDITIONS		MIN	TYP	MAX	UNIT
$t_{d(OD)}$	Differential-output delay time	R_L = 54Ω,	See Figure 6-2		45	65	ns
$t_{t(OD)}$	Differential-output transition time				80	120	ns
t_{PZH}	Output enable time to high level	R_L = 110Ω,	See Figure 6-3		80	120	ns
t_{PZL}	Output enable time to low level	R_L = 110Ω,	See Figure 6-4		55	80	ns
t_{PHZ}	Output disable time from high level	R_L = 110Ω,	See Figure 6-3		75	115	ns
t_{PLZ}	Output disable time from low level	R_L = 110Ω,	See Figure 6-3		18	30	ns

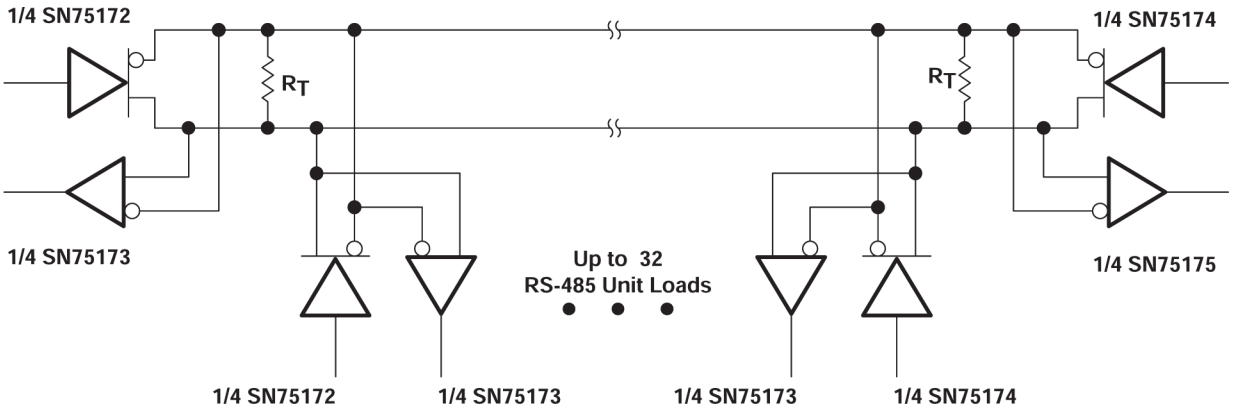
8 Application and Implementation

Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

8.1 Application Information



A. The line length should be terminated at both ends in its characteristic impedance ($R_T = Z_O$). Stub lengths off the main line should be kept as short as possible.

Figure 8-1. Typical Application Circuit

9 Device and Documentation Support

TI offers an extensive line of development tools. Tools and software to evaluate the performance of the device, generate code, and develop solutions are listed below.

9.1 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. Click on *Notifications* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

9.2 Support Resources

TI E2E™ support forums are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's Terms of Use.

9.3 Trademarks

TI E2E™ is a trademark of Texas Instruments.
All trademarks are the property of their respective owners.

9.4 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

9.5 Glossary

TI Glossary	This glossary lists and explains terms, acronyms, and definitions.

10 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision B (May 1995) to Revision C (April 2024)	Page
• Changed the numbering format for tables, figures, and cross-references throughout the document	1
• Added the *Thermal Information* table	5
• Changed Note A in Figure 6-3	9

11 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".
RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.
Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
