Precision Single, Dual and Quad Low Noise Operational Amplifiers

FN6631
Rev 8.00
September 29, 2015

The ISL28107, ISL28207 and ISL28407 are single, dual and quad amplifiers featuring low noise, low input bias current, and low offset and temperature drift. This makes them the ideal choice for applications requiring both high DC accuracy and AC performance. The combination of precision, low noise, and small footprint provides the user with outstanding value and flexibility relative to similar competitive parts.

Applications for these amplifiers include precision active filters, medical and analytical instrumentation, precision power supply controls, and industrial controls.

The ISL28107 is available in 8 Ld SOIC, MSOP and TDFN packages. The ISL28207 is available in 8 Ld SOIC, MSOP and TDFN packages. The ISL28407 is available in a 14 Ld SOIC package. All devices are offered in standard pin configurations and operate over the extended temperature range of -40°C to +125°C.

Applications

- Precision instruments
- Medical instrumentation
- Spectral analysis equipment
- Active filter blocks
- Microphone pre-amplifier
- Thermocouples and RTD reference buffers
- Data acquisition
- Power supply control

Features

- Low input offset . . . . . .75µV Max.
- Input bias current. 15pA
- Superb temperature drift
  - Voltage offset . . . . . 0.65µV/°C Max.
  - Input current . . . . . .0.9pA/°C Max.
- Outstanding ESD performance
  - Human Body Model 4.5kV
  - Machine Model. 500V
  - Charged Device Model. 1.5kV
- Very low voltage noise, 10Hz . . . . . 14nV/√Hz
- Low current consumption (per amp) . . . . . 0.29mA Max.
- Gain-bandwidth product 1MHz
- Wide supply range . . . . . .4.5V to 40V
- Operating temperature range. . . . . .-40°C to +125°C
- No phase reversal
- Pb-free (RoHS compliant)

NOTES:

1. Add “-T*” suffix for tape and reel. Please refer to Tech Brief TB347 for details on reel specifications.
2. These Intersil Pb-free plastic packaged products employ special Pb-free material sets, molding compounds/die attach materials, and 100% matte tin plate plus anneal (e3 termination finish, which is RoHS compliant and compatible with both SnPb and Pb-free soldering operations). Intersil Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J STD-020.
3. For Moisture Sensitivity Level (MSL), please see device information page for ISL28107, ISL28207 and ISL28407. For more information on MSL please see Tech Brief TB363.

Absolute Maximum Ratings

Maximum Supply Voltage 42V
Maximum Differential Input Current 20mA
Maximum Differential Input Voltage . . . . . (V-) - 0.5V to (V+) + 0.5V
Min/Max Input Voltage . . . . . (V-) - 0.5V to (V+) + 0.5V
Max/Min Input Current for Input Voltage >V+ or <V- . . . . . ±20mA
Output Short-Circuit Duration (1 Output at a Time) . . . . . Indefinite
ESD Tolerance
- Human Body Model 4.5kV
- Machine Model (ISL28207 MSOP only) 300V
- Machine Model 500V
- Charged Device Model 1.5kV

ESD Tolerance (ISL28407 SOIC only)
- Human Body Model 6kV
- Machine Model 450V
- Charged Device Model 2kV

Thermal Information

Thermal Resistance (Typical)	θ_{JA} (°C/W)	θ_{JC} (°C/W)
8 Ld SOIC (ISL28107, Notes 4, 5)	120	60
8 Ld SOIC (ISL28207, Notes 4, 5)	105	50
8 Ld MSOP (ISL28107, Notes 4, 5)	155	50
8 Ld MSOP (ISL28207, Notes 4, 5)	160	55
8 Ld TDFN (ISL28107, Notes 6, 7)	44	3
8 Ld TDFN (ISL28207, Notes 6, 7)	43	2
14 Ld SOIC (ISL28407, Notes 4, 5)	73	45

Storage Temperature Range . . . . . -65°C to +150°C
Pb-Free Reflow Profile . . . . . see link below
http://www.intersil.com/pbfree/Pb-FreeReflow.asp

Operating Conditions

Ambient Operating Temperature Range . . . . . -40°C to +125°C
Maximum Operating Junction Temperature . . . . . +150°C

CAUTION: Do not operate at or near the maximum ratings listed for extended periods of time. Exposure to such conditions may adversely impact product reliability and result in failures not covered by warranty.

NOTES:

4. θ_{JA} is measured with the component mounted on a high effective thermal conductivity test board in free air. See Tech Brief TB379 for details.
5. For θ_{JC}, the "case temp" location is taken at the package top center.
6. θ_{JA} is measured in free air with the component mounted on a high effective thermal conductivity test board with "direct attach" features. See Tech Brief TB379.
7. For θ_{JC}, the "case temp" location is the center of the exposed metal pad on the package underside.

Applications Information

Functional Description

The ISL28107, ISL28207 and ISL28407 are single, dual and quad, very low 1/f noise (14nV/√Hz @ 10Hz) precision op-amps. These amplifiers feature very high open loop gain (50kV/mV) for excellent CMRR (145dB) and gain accuracy. Both devices are fabricated in a new precision 40V complementary bipolar DI process.

The super-beta NPN input stage with bias current cancellation provides bipolar-like levels of AC performance, with the low input bias currents approaching JFET levels. The temperature stabilization provided by bias current cancellation removes the high input bias current temperature coefficient commonly found in JFET amplifiers. Figures 9 and 10 show the input bias current variation over temperature.

The input offset voltage (V_{OS}) has a very low, worst case value of 75µV max at +25°C and a maximum T_C of 0.65µV/°C. Figure 38 shows V_{OS} as a function of supply voltage and temperature with the common mode voltage at 0V for split supply operation.

The complementary bipolar output stage maintains stability driving large capacitive loads (to 10nF) without external compensation. The small signal overshoot vs. load capacitance is shown in Figure 54.

Operating Voltage Range

The devices are designed to operate over the 4.5V (±2.25V) to 40V (±20V) range and are fully characterized at 10V (±5V) and 30V (±15V). Both DC and AC performance remain virtually unchanged over the complete 4.5V to 40V operating voltage range. Parameter variation with operating voltage is shown in the "Typical Performance Curves" beginning on page 11. The input common mode voltage range sensitivity to temperature is shown in Figure 38 (±15V).

Input ESD Diode Protection

The input terminals (IN+ and IN-) each have internal ESD protection diodes to the positive and negative supply rails, a series connected 500Ω current limiting resistor followed by an anti-parallel diode pair across the input NPN transistors (Circuit 1 in "Pin Descriptions" on page 4).

The resistor-ESD diode configuration enables a wide differential input voltage range equal to the lesser of the Maximum Supply Voltage in the "Absolute Maximum Ratings" on page 6 (42V), or a maximum of 0.5V beyond the V+ and V- supply voltage. The internal protection resistors eliminate the need for external input current limiting resistors in unity gain connections and other circuit applications where large voltages or high slew rate signals are present. Although the amplifier is fully protected, high input slew rates that exceed the amplifier slew rate (±0.32V/µs) may cause output distortion.

Output Current Limiting

The output current is internally limited to approximately ±40mA at +25°C and can withstand a short circuit to either rail as long as the power dissipation limits are not exceeded. This applies to only one amplifier at a time for the dual op-amp. Continuous operation under these conditions may degrade long-term reliability.

Output Phase Reversal

Output phase reversal is a change of polarity in the amplifier transfer function when the input voltage exceeds the supply voltage. The ISL28107, ISL28207 and ISL28407 are immune to output phase reversal, even when the input voltage is 1V beyond the supplies.

Unused Channels

If the application only requires one channel, the user must configure the unused channels to prevent them from oscillating. The unused channels can oscillate if the input and output pins are floating. This results in higher than expected supply currents and possible noise injection into the channel being used. The proper way to prevent this oscillation is to short the output to the inverting input and ground the positive input, as shown in Figure 55.

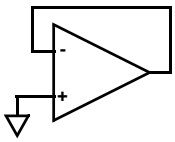

FIGURE 55. PREVENTING OSCILLATIONS IN UNUSED CHANNELS

Power Dissipation

It is possible to exceed the +150°C maximum junction temperatures under certain load and power supply conditions. It is therefore important to calculate the maximum junction temperature (T_{JMAX}) for all applications to determine if power supply voltages, load conditions, or package type need to be modified to remain in the safe operating area. These parameters are related using Equation 1:

$$T_{JMAX} = T_{MAX} + \theta_{JA} x PD_{MAXTOTAL} \quad \text{(EQ. 1)}$$

Where:

- $P_{DMAXTOTAL}$ is the sum of the maximum power dissipation of each amplifier in the package (PD_{MAX})

PD_{MAX} for each amplifier can be calculated using Equation 2:

$$PD_{MAX} = V_S \times I_{qMAX} + (V_S - V_{OUTMAX}) \times \frac{V_{OUTMAX}}{R_L} \quad \text{(EQ. 2)}$$

where:

- T_{MAX} = Maximum ambient temperature
- θ_{JA} = Thermal resistance of the package
- PD_{MAX} = Maximum power dissipation of one amplifier
- V_S = Total supply voltage
- I_{qMAX} = Maximum quiescent supply current of one amplifier
- V_{OUTMAX} = Maximum output voltage swing of the application
- R_L = Load resistance

ISL28107, ISL28207, ISL28407 SPICE Model

Figure 56 shows the SPICE model schematic, and Figure 57 shows the net list for the ISL28107, ISL28207 and ISL28407 SPICE model. The model is a simplified version of the actual device and simulates important AC and DC parameters. AC parameters incorporated into the model are: 1/f and flatband noise, Slew Rate, CMRR, Gain and Phase. The DC parameters are VOS, IOS, total supply current and output voltage swing. The model uses typical parameters given in the "Electrical Specifications" table beginning on page 6. A_{VOL} is adjusted for 155dB with the dominant pole at 0.01Hz. CMRR is set (145dB, f_{cm} = 100Hz). The input stage models the actual device to present an accurate AC representation. The model is configured for ambient temperature of +25°C.

Figures 58 through 68 show the characterization vs simulation results for the Noise Voltage, Closed Loop Gain vs Frequency, Closed Loop Gain vs R_L, Large Signal Step Response, Open Loop Gain Phase and Simulated CMRR vs Frequency.

*Intended use:
*This Pspice Macromodel is intended to give
*typical DC and AC performance
*characteristics under a wide range of
*external circuit configurations using
*compatible simulation platforms - such as
*iSim PE.
**
*Device performance features supported by
*this model
*Typical, room temp., nominal power supply
*voltages used to produce the following
*characteristics:
*Open and closed loop I/O impedances
*Open loop gain and phase
*Closed loop bandwidth and frequency
*response
*Loading effects on closed loop frequency
*response
*Input noise terms including 1/f effects
*Slew rate
*Input and Output Headroom limits to I/O
*voltage swing
*Supply current at nominal specified supply
*voltages
**
*Device performance features NOT
*supported by this model:
*Harmonic distortion effects
*Disable operation (if any)
*Thermal effects and/or over temperature
*parameter variation
*Limited performance variation vs. supply
*voltage is modeled
*Part to part performance variation due to
*normal process parameter spread
*Any performance difference arising from

DATE	REVISION	CHANGE
September 29, 2015	FN6631.8	- Updated Ordering Information Table on page 5. - Updated About Intersil Verbiage. -Updated POD L8.3X3K to most current revision with changes as follows: -Revision 1 to Revision 2 Changes: Tiebar Note 5 updated From: Tiebar shown (if present) is a non-functional feature. To: Tiebar shown (if present) is a non-functional feature and may be located on any of the 4 sides (or ends).
February 11, 2013	FN6631.7	Removed following parts from datasheet and updated accordingly throughout: ISL28407FRZ, 16 Ld QFN ISL28407FVZ, 14 Ld TSSOP ISL28407SOICEVAL1Z Parts were never released and were marked as *Coming Soon* Updated Package Outline Drawing M8.118B on page 29. Correct lead dimension in side view 2 from 0.15 - 0.05mm to 0.15±0.05mm.
February 21, 2012	FN6631.6	Added dual and quad to the “SPICE NET LIST” on page 22. Updated “Package Outline Drawing” on page 30. Added Thin to Package Title.
October 14, 2011	FN6631.5	Page 7: for ±15V and page 8 ±5V Elect Spec tables: 1. Ib for ISL28407 with Ta = -40C to 85C, change from +/-300pA to +/-330pA. 2. Ios for ISL28407 with Ta = -40C to 85C, change from +/-300pA to +/-330pA 3. TCIb/TCIos for 28407 with Ta = -40C to 70C, change the typical from 0.03 pA/C to 0.3 pA/C. 4. Spec limits for TCIb and TCIos for 0C to 70C: please change it from +/-1.4pA/C to +/-1.5pA/C and change test condition from "-40C to 70C" to "0C to 70C". For ISL28407 specs, change all "-40C to 70C" to "0C to 70C" 5. Spec limits for TCIb and TCIos for -40C to 85C: please change it from +/-1.8pA/C to +/-2.0pA/C 6. Voh @ Rl = 10kohm and 2kohm, please add "-40C to 70C under "test condition" and bold min. spec "13.2V and 13.1V" 7. Vol @ Rl = 10kohm and 2kohm, please add "-40C to 70C under "test condition" to max. spec. "-13.2V and -13.1V" ESD Levels for ISL28407FBZ SOIC package HBM: 6kV, MM: 450V, CDM: 2kV • Pg 1 Description: - Last paragraph - changed "ISL28407 will be available" to "ISL28407 is available" • Pg 4 Ordering Information - Removed *Coming Soon* from ISL28407FBZ • Pg 6 Thermal Information: - 8 Ld TDFN (ISL28107) ThetaJA changed from 48 to 44 - 8 Ld TDFN (ISL28107) ThetaJC changed from 7 to 3 ±15V Electrical Specifications table - Added ISL28407 VOS spec limits - Added ISL28407 TCVOS spec limits • Pg 7 ±15V Electrical Specifications table - Added ISL28407 IB spec limits - Added ISL28407 TCIB spec limits - Added ISL28407 IOS spec limits - Added ISL28407 TCIOS spec limits - Converted AOL specs and limits from 3,000 V/mV and 40,000V/mV to 130dB and 152dB respectively • Pg 8 ±5V Electrical Specifications table - Added ISL28407 VOS spec limits • Pg 9 ±5V Electrical Specifications table - Added ISL28407 TCVOS spec limits - Added ISL28407 IB spec limits - Added ISL28407 TCIB spec limits - Added ISL28407 IOS spec limits - Added ISL28407 TCIOS spec limits - Converted AOL specs and limits from 3,000 V/mV and 40,000V/mV to 130 dB and 152 dB respectively • Pg 19 - Applications section "Using one Channel" - Changed title to "unused channels" and added text edits for clarity.

DATE	REVISION	CHANGE
August 26, 2011	FN6631.4	• On page 3, Pin Configurations, added ISL28207 MSOP pin diagram. • On page 4, Pin Descriptions, added ISL28207 MSOP to pin descriptions. • On page 5, Ordering Information, added ISL28207FUZ part and information. Updated ISL28107FBZ Pkg Dwg # from M8.118 to M8.118B. For ISL28107FRTZ and ISL28207FRTZ, updated Pkg Dwg # from L8.3x3A to L8.3x3K. For "Coming Soon" parts: ISL28407FBZ: changed Pkg Dwg # from M14.15 to MDP0027; ISL28407FVZ: changed Pkg Dwg # from M14.173 to MDP0044; ISL28407FRZ: changed Pkg Dwg # from 16.4x4 to L16.4x4E. ISL28207FRTZ: changed Part Marking from 207Z to 8207. For "Coming Soon" parts: ISL28407FBZ: changed Part Marking from 28407 to 28407 FBZ. ISL28407FVZ: changed Part Marking from 28407 to 28407 FVZ. ISL28407FRZ: changed Part Marking from 28407 to 407FRZ. Added "Coming Soon" ISL28407SOICEVAL1Z Evaluation Board. • On page 6, Thermal Information, added ISL28207 8Ld MSOP, and ISL28407 14 Ld SOIC and 16 Ld QFN thermal information. • On page 6 and page 8, Electrical Specifications: for V_{OS} spec for ISL28207 MSOP package, added -110µV MIN, +110 µV MAX, and -200µV MIN, +200µV MAX. For TCV_{OS} spec for ISL28207 MSOP package, added -0.9µV/°C MIN, +0.9µV/°C MAX. • On page 8 and page 8, Electrical Specifications: for TCI_B spec for ISL28207 MSOP package, added -1.5pA/°C MIN, +1.5pA/°C MAX. For TCI_{OS} spec for ISL28207 MSOP package, added -1.5pA/°C MIN, +1.5pA/°C MAX. • Updated to current Intersil datasheet template.
September 7, 2010	FN6631.3	1. General changes: a. Added in ISL28407 Quad devices for SOIC, TSSOP and QFN packages. b. Added in TDFN packages for single ISL28107 and dual ISL28207 devices. c. Added in new VOS and TCVOS limits for TDFN packages 2. Specific changes: a. On page 1 – Added in ISL28407 to title and front page info. Corrected Input Bias Current in Features from 60pA to 15pA (in order to match Spec Table) b. On page 3 - Added in ISL28107FRTZ, ISL28207FRTZ, ISL28407FBZ, ISL28407FVZ, and ISL28407FRZ packages to Ordering information. Added in –T7, T-13 & -T7A tape and reel extensions where applicable. c. On page 3 -Corrected part marking for ISL28207FRTZ parts from 207Z to 8207 d. On page 3 – Added in TDFN, 14 Ld SOIC, 14 Ld TSSOP and 16 Ld QFN to pin configurations. e. On page 4 – Updated “Pin Descriptions” with newly added packages. f. On page 6 – in “Thermal Information”, added in thermal packaging info & applicable notes for TDFN packages. g. On page 6 and page 7 Electrical Specifications Tables – Added two new line items for VOS spec. TDFN package ISL28107 limits ±100uV 25C and ±190uV full temp. TDFN package ISL28207 limits ±100uV 25C and ±175uV full temp. h. On page 6 and page 7 Electrical Specifications Table – Added two new line items for TCVOS spec. TDFN package ISL28107 limits ±0.9uV/C full temp. TDFN package ISL28207 limits ±0.75uV/C. i. On page 30 to page 34 - Added in POD for L8.3x3A, M14.15, M14.173, and L16.4x4
March 9, 2010	FN6631.2	1. Added MSOP package to the ordering information and added applicable POD M8.118 to end of datasheet 2. Separated each part number with it's own specific -T7 and -T13 suffix. Removed “Add “-T7” or “-T13” suffix for Tape and Reel.” from Note 1. 3. Added MSOP to the Pin Configuration and Pin Descriptions 4. Updated ±15 and ±5V Electrical Specification table with the following edits: A) Separated VOS specs for SOIC and MSOP packages. Added new VOS specs for MSOP Grade package. B) Separated TCVOS specs for SOIC and MSOP packages. Added new TCVOS specs for MSOP package. 5. Added Theta JA and JC for the 8 Ld MSOP package. Added Theta JC values for both SOIC package options. Changed Theta JA for 8 Ld SOIC (ISL28207) from 115 to 105.
February 22, 2010		1. Added “Related Literature*(see page 26)” on page 1. 2. Added Evaluation Boards to “Ordering Information” on page 3. 3. “Electrical Specifications” Tables, page 6 to page 10. Unbolded MIN/MAX specs with “T_A = -40°C to +85°C” conditions (since only MIN/MAX specs with “T_A = -40°C to +125°C” conditions should be bolded, per note in common conditions) 4. Corrected Note reference in I_{SC} parameter on page 7 and page 10 from Note 3 to Note 9.

Revision History

The revision history provided is for informational purposes only and is believed to be accurate, but not warranted. Please go to the web to make sure that you have the latest revision. **(Continued)**

DATE	REVISION	CHANGE
November 10, 2009	FN6631.1	1. Updated VOS, IB, and IOS electrical specifications. 2. Added Typical performance curves, Figures 3 through 32. 3. Output Short Circuit Current test condition has been clarified with Note 9. 4. Updated POD. 5. Added Spice Model, associated text and Figures 58 through 68. 6. Deleted old Figures 6, 7, 8, 10, 11 and 12. 7. Added Licence Statement on page 16 and referenced in spice model.
June 5, 2009	FN6631.0	Initial Release

About Intersil

Intersil Corporation is a leading provider of innovative power management and precision analog solutions. The company's products address some of the largest markets within the industrial and infrastructure, mobile computing and high-end consumer markets.

For the most updated datasheet, application notes, related documentation and related parts, please see the respective product information page found at www.intersil.com.

You may report errors or suggestions for improving this datasheet by visiting www.intersil.com/ask.

Reliability reports are also available from our website at www.intersil.com/support.

TYPICAL RECOMMENDED LAND PATTERN

NOTES:

1. Dimensions are in millimeters.
   Dimensions in ( ) for Reference Only.
2. Dimensioning and tolerancing conform to AMSE Y14.5m-1994.
3. Unless otherwise specified, tolerance : Decimal ± 0.05
4. Dimension does not include interlead flash or protrusions.
   Interlead flash or protrusions shall not exceed 0.25mm per side.
5. The pin #1 identifier may be either a mold or mark feature.
6. Reference to JEDEC MS-012.

TYPICAL RECOMMENDED LAND PATTERN

NOTES:

1. Dimensions are in millimeters.
   Dimensions in ( ) for Reference Only.
2. Dimensioning and tolerancing conform to ASME Y14.5m-1994.
3. Unless otherwise specified, tolerance : Decimal ± 0.05
4. Dimension applies to the metallized terminal and is measured between 0.15mm and 0.20mm from the terminal tip.
5. Tiebar shown (if present) is a non-functional feature and may be located on any of the 4 sides (or ends).
6. The configuration of the pin #1 identifier is optional, but must be located within the zone indicated. The pin #1 identifier may be either a mold or mark feature.
7. Compliant to JEDEC MO-229 WEEC-2 except for the foot length.
