Please note: As part of the Fairchild Semiconductor integration, some of the Fairchild orderable part numbers will need to change in order to meet ON Semiconductor's system requirements. Since the ON Semiconductor product management systems do not have the ability to manage part nomenclature that utilizes an underscore (_), the underscore (_) in the Fairchild part numbers will be changed to a dash (-). This document may contain device numbers with an underscore (_). Please check the ON Semiconductor website to verify the updated device numbers. The most current and up-to-date ordering information can be found at www.onsemi.com. Please email any questions regarding the system integration to Fairchild guestions@onsemi.com.

LVDS Single Port High Speed Repeater

General Description

This single port repeater is designed for high speed interconnects utilizing Low Voltage Differential Signaling (LVDS) technology. It accepts and outputs LVDS levels with a typical differential output swing of 330 mV which provides low EMI at ultra low power dissipation even at high frequencies. It can directly accept multiple differential I/O including: LVPECL, HSTL, and SSTL-2 for translating directly to LVDS.

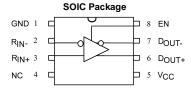

Features

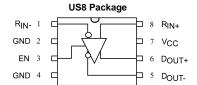

- Up to 1.6 Gb/s full differential path
- 3.5 ps max random jitter and 135 ps max deterministic iitter
- 3.3V power supply operation
- Wide rail-to-rail common mode range
- Ultra low power consumption
- LVDS receiver inputs accept LVPECL, HSTL, and SSTL-2 directly
- Power off protection
- 7 kV HBM ESD protection (all pins)
- Meets or exceed the TA/EIA-644-A LVDS standard
- Packaged in 8-pin SOIC and US8
- Open circuit fail safe protection
