

## FEATURES

- 14-bit resolution with no missing codes**
- 8-channel multiplexer with choice of inputs**
  - Unipolar single-ended
  - Differential (GND sense)
  - Pseudobipolar
- Throughput: 250 kSPS**
- INL/DNL:  $\pm 0.5/\pm 0.25$  LSB typical**
- SINAD: 85 dB at 20 kHz**
- THD:  $-100$  dB at 20 kHz**
- Analog input range: 0 V to  $V_{REF}$  with  $V_{REF}$  up to VDD**
- Multiple reference types**
  - Internal selectable 2.5 V or 4.096 V
  - External buffered (up to 4.096 V)
  - External (up to VDD)
- Internal temperature sensor (TEMP)**
- Channel sequencer, selectable 1-pole filter, busy indicator**
- No pipeline delay, SAR architecture**
- Single-supply 2.3 V to 5.5 V operation with 1.8 V to 5.5 V logic interface**
- Serial interface compatible with SPI, MICROWIRE, QSPI, and DSP**
- Power dissipation**
  - 2.9 mW at 2.5 V/200 kSPS
  - 10.8 mW at 5 V/250 kSPS
- Standby current: 50 nA**
- 20-lead 4 mm  $\times$  4 mm LFCSP package**
- Supports defense and aerospace applications (AQEC standard)**
- Military temperature range ( $-55^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$ )**
- Controlled manufacturing baseline**
- Enhanced product change notification**
- Qualification data available on request**

## APPLICATIONS

- Multichannel system monitoring
- Battery-powered equipment
- Medical instruments: ECG/EKG
- Mobile communications: GPS
- Power line monitoring
- Data acquisition
- Seismic data acquisition systems
- Instrumentation
- Process control

Figure 1.

## GENERAL DESCRIPTION

The **AD7949-EP** is an 8-channel, 14-bit, charge redistribution successive approximation register (SAR) analog-to-digital converter (ADC) that operates from a single power supply, VDD.

The **AD7949-EP** contains all components for use in a multi-channel, low power data acquisition system, including a true 14-bit SAR ADC with no missing codes; an 8-channel, low crosstalk multiplexer that is useful for configuring the inputs as single-ended (with or without ground sense), differential, or bipolar; an internal low drift reference (selectable 2.5 V or 4.096 V) and buffer; a temperature sensor; a selectable one-pole filter; and a sequencer that is useful when channels are continuously scanned in order.

The **AD7949-EP** uses a simple SPI interface for writing to the configuration register and receiving conversion results. The SPI interface uses a separate supply, VIO, which is set to the host logic level. Power dissipation scales with throughput.

The **AD7949-EP** is housed in a tiny 20-lead LFCSP with operation specified from  $-55^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$ . Full details about this enhanced product are available in the **AD7949** data sheet, which should be consulted in conjunction with this data sheet.

<b>TEMPERATURE RANGE<sup>13</sup></b>					
Specified Performance	T <sub>MIN</sub> to T <sub>MAX</sub>	–55		+125	°C

<sup>1</sup> See the AD7949 data sheet.

<sup>2</sup> The bandwidth is set in the configuration register.

<sup>3</sup> LSB means least significant bit. With the 5 V input range, one LSB = 305 μV.

<sup>4</sup> See the AD7949 data sheet. These specifications include full temperature range variation but not the error contribution from the external reference.

<sup>5</sup> With VDD = 5 V, unless otherwise noted.

<sup>6</sup> All specifications expressed in decibels are referred to a full-scale input FSR and tested with an input signal at 0.5 dB below full scale, unless otherwise specified.

<sup>7</sup> This is the output from the internal band gap.

<sup>8</sup> The output voltage is internal and present on a dedicated multiplexer input.

<sup>9</sup> Unipolar mode: serial 14-bit straight binary.

Bipolar mode: serial 14-bit twos complement.

<sup>10</sup> Conversion results available immediately after completed conversion.

<sup>11</sup> With all digital inputs forced to VIO or GND as required.

<sup>12</sup> During acquisition phase.

<sup>13</sup> Contact an Analog Devices, Inc., sales representative for the extended temperature range.

**TIMING SPECIFICATIONS**

VDD = 4.5 V to 5.5 V, VIO = 1.8 V to VDD, all specifications –55°C to +125°C, unless otherwise noted.

## ABSOLUTE MAXIMUM RATINGS

Table 5.

Parameter	Rating
Analog Inputs IN <sub>x</sub> , COM <sup>1</sup>	GND – 0.3 V to VDD + 0.3 V or VDD ± 130 mA
REF, REFIN	GND – 0.3 V to VDD + 0.3 V
Supply Voltages	
VDD, VIO to GND	–0.3 V to +7 V
VIO to VDD	–0.3 V to VDD + 0.3 V
DIN, CNV, SCK to GND	–0.3 V to VIO + 0.3 V
SDO to GND	–0.3 V to VIO + 0.3 V
Storage Temperature Range	–65°C to +150°C
Junction Temperature	150°C
θ <sub>JA</sub> Thermal Impedance (LFCSP)	47.6°C/W
θ <sub>JC</sub> Thermal Impedance (LFCSP)	4.4°C/W

<sup>1</sup> See the AD7949 data sheet.

Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the product. This is a stress rating only; functional operation of the product at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

### ESD CAUTION

**ESD (electrostatic discharge) sensitive device.** Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

## PIN CONFIGURATION AND FUNCTION DESCRIPTIONS

## NOTES

1. THE EXPOSED PAD IS NOT CONNECTED INTERNALLY. FOR INCREASED RELIABILITY OF THE SOLDER JOINTS, IT IS RECOMMENDED THAT THE PAD BE SOLDERED TO THE SYSTEM GROUND PLANE.

09822-004

Figure 4. Pin Configuration

Table 6. Pin Function Descriptions

Pin No.	Mnemonic	Type <sup>1</sup>	Description
1, 20	VDD	P	Power Supply. Nominally 2.5 V to 5.5 V when using an external reference and decoupled with 10 $\mu$ F and 100 nF capacitors.
2	REF	AI/O	When using the internal reference for 2.5 V output, the minimum should be 3.0 V. When using the internal reference for 4.096 V output, the minimum should be 4.5 V. Reference Input/Output. See the <a href="#">AD7949</a> data sheet. When the internal reference is enabled, this pin produces a selectable system reference = 2.5 V or 4.096 V. When the internal reference is disabled and the buffer is enabled, REF produces a buffered version of the voltage present on the REFIN pin (4.096 V maximum), useful when using low cost, low power references. For improved drift performance, connect a precision reference to REF (0.5 V to VDD). For any reference method, this pin needs decoupling with an external 10 $\mu$ F capacitor connected as close to REF as possible. See the <a href="#">AD7949</a> data sheet.
3	REFIN	AI/O	Internal Reference Output/Reference Buffer Input. See the <a href="#">AD7949</a> data sheet. When using the internal reference, the internal unbuffered reference voltage is present and needs decoupling with a 0.1 $\mu$ F capacitor. When using the internal reference buffer, apply a source between 0.5 V and 4.096 V that is buffered to the REF pin as described above.
4, 5	GND	P	Power Supply Ground.
6 to 9	IN4 to IN7	AI	Channel 4 through Channel 7 Analog Inputs.
10	COM	AI	Common Channel Input. All input channels, IN[7:0], can be referenced to a common-mode point of 0 V or $V_{REF}/2$ V.
11	CNV	DI	Convert Input. On the rising edge, CNV initiates the conversion. During conversion, if CNV is held high, the busy indicator is enabled.
12	DIN	DI	Data Input. This input is used for writing to the 14-bit configuration register. The configuration register can be written to during and after conversion.
13	SCK	DI	Serial Data Clock Input. This input is used to clock out the data on SDO and clock in data on DIN in an MSB first fashion.
14	SDO	DO	Serial Data Output. The conversion result is output on this pin, synchronized to SCK. In unipolar modes, conversion results are straight binary; in bipolar modes, conversion results are twos complement.
15	VIO	P	Input/Output Interface Digital Power. Nominally at the same supply as the host interface (1.8 V, 2.5 V, 3 V, or 5 V).
16 to 19	IN0 to IN3	AI	Channel 0 through Channel 3 Analog Inputs.
21 (EPAD)	Exposed Pad (EPAD)	NC	The exposed pad is not connected internally. For increased reliability of the solder joints, it is recommended that the pad be soldered to the system ground plane.

<sup>1</sup> AI = analog input, AI/O = analog input/output, DI = digital input, DO = digital output, and P = power.
