Precautions

★Please refer to "Common Precautions" for correct use.

Correct Use

●**Mounting**

Use M2.3 mounting screw with plane washers or spring washers to securely mount the Switch.

Tighten the screws to a torque of 0.23 to 0.26 N·m {2.3 to 2.7 kgf·cm}.

●**Wiring**

Do not use the Switch with Connector mounted and weight load applied to the Connector and lead wire, otherwise it may rattle or may result in connection failure.

●**Using Micro Loads**

Using a model for ordinary loads to open or close the contact of a micro load circuit may result in faulty contact. It is recommended to use the Switch in the operation range shown in the diagram. However, even when using micro load models within the operating range shown below, if inrush current occurs when the contact is opened or closed, it may increase contact

wear and so decrease durability. Therefore, insert a contact protection circuit where necessary.

The N-level reference value applies for the minimum applicable load. This value indicates the malfunction reference level for the reliability level of 60% (λ_{60}). (JIS C5003)

The equation, $\lambda_{60} = 0.5 \times 10^{-6} / \text{operation}$ indicates that the

estimated malfunction rate is less than $\frac{1}{2,000,000}$ operations with a reliability level of 60%. This indicates that it is considered malfunction.

Connector
