LF Design Kits

Part Number	Description
ATA2270-EK1	This LF demonstration kit provides a completely self-contained means to begin using RFID systems. It includes an LCD and control buttons to enable interaction with the RFID system and supports the e5530/TK5530, T5551/TK5551, ATA5567 (T5557), ATA5570, ATA5575, ATA5577, ATA5558 IDIC®s and U2270B from Atmel. Source code and reference designs are also included. This kit is supported by all the standard AVR® development tools such as AVR Studio®, STK®500, JTAGICE mkII, etc.
ATAB5570	The ATA5570 is based on the ATA5567, however, it is enlarged by an additional sensor input. The board is equipped with a switchable sensor resistor. Depending on the impedance, the memory data of the tag is sent in inverse or non-inverse mode. The board design is also suitable for testing other tag versions in SO8 packages.
