The EL5202 and EL5203 are dual, high-speed VFAs based on a CFA architecture. This gives the typical high slew rate benefits of a CFA family along with the stability and ease of use associated with the VFA type architecture. With slew rates of $3500 \mathrm{~V} / \mu \mathrm{s}$, these devices enable the use of voltage feedback amplifiers in a space where the only alternative has been current feedback amplifiers. This family also includes single, dual, and triple versions with 750 MHz bandwidths; please see the EL5104 through EL5304 data sheet for details.

Both devices operate on single 5 V or $\pm 5 \mathrm{~V}$ supplies from minimum supply current. The EL5202 also features an output enable function, which can be used to put the output in to a high-impedance mode. This allows the outputs of multiple amplifiers to be tied together for use in multiplexing applications.
Typical applications for these families include cable driving, filtering, $A / D$ and $D / A$ buffering, multiplexing and summing within video, communications, and instrumentation designs.

## Features

- Operates off $3 \mathrm{~V}, 5 \mathrm{~V}$, or $\pm 5 \mathrm{~V}$ supplies
- Power-down to 13 13 (EL5202)
- -3 dB bandwidth $=400 \mathrm{MHz}$
- $\pm 0.1 \mathrm{~dB}$ bandwidth $=35 \mathrm{MHz}$
- Low supply current $=5 \mathrm{~mA}$ per amplifier
- Slew rate $=3500 \mathrm{~V} / \mu \mathrm{s}$
- Low offset voltage $=5 \mathrm{mV}$ max
- Output current $=150 \mathrm{~mA}$
- $\mathrm{A}_{\text {VOL }}=2000$
- Differential gain $/$ phase $=0.01 \% / 0.01^{\circ}$
- Pb-free (RoHS compliant)

## Applications

- Video amplifiers
- PCMCIA applications
- A/D drivers
- Line drivers
- Portable computers
- High speed communications
- RGB applications
- Broadcast equipment
- Active filtering

NOTES:

1. Please refer to TB347 for details on reel specifications.
2. These Intersil Pb-free plastic packaged products employ special Pb-free material sets, molding compounds/die attach materials, and 100\% matte tin plate plus anneal (e3 termination finish, which is RoHS compliant and compatible with both SnPb and Pb -free soldering operations). Intersil Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J STD-020.
3. For Moisture Sensitivity Level (MSL), please see product information page for EL5202, EL5203. For more information on MSL, please see tech brief TB363.

| Ambient Operating Temperature Range | $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ |  |
| Operating Junction Temperature | $\ldots . . . .+150^{\circ} \mathrm{C}$ |  |
| Pb-Free Reflow Profile . . . . . . . . . . . . . http://www.intersil.com/pbfree/Pb | w.asp | e link below |

CAUTION: Do not operate at or near the maximum ratings listed for extended periods of time. Exposure to such conditions may adversely impact product reliability and result in failures not covered by warranty.

NOTES:
4. $\theta_{\mathrm{JA}}$ is measured with the component mounted on a high effective thermal conductivity test board in free air. See Tech Brief TB379 for details.
5. For $\theta_{\mathrm{JC}}$, the "case temp" location is taken at the package top center.

## NOTES:

6. All AC tests are performed on a "warmed up" part, except slew rate, which is pulse tested.
7. Standard NTSC signal $=286 \mathrm{mV}_{\mathrm{P}-\mathrm{P},} \mathrm{f}=3.58 \mathrm{MHz}$, as $\mathrm{V}_{\mathrm{IN}}$ is swept from 0.6 V to $1.314 \mathrm{~V} . R_{\mathrm{L}}$ is $D C$ coupled.
8. Disable/Enable time is defined as the time from when the logic signal is applied to the $\overline{\mathrm{CE}}$ pin to when the supply current has reached half its final value.
9. Compliance to datasheet limits is assured by one or more methods: production test, characterization and/or design.
