J201 pin 5 open = ON  
J201 pin 5 LOW or GND = OFF

### 3. Current Sharing/Remote Sense

The outputs of N+1 (N=1,2...5) models can be shared. It is shown in Figure 3, one load-share controller is required for each model and circuits are identical when N+ 1 identical models are used.

Terminals J302 and J303 are connected to the Vo+ and Vo-, respectively, of the first power model. The Vo+ and Vo- correspond to the other models positive and negative output pins. The Vo+ connects to positive output bus to the load and Voconnects the negative output bus to the load.

The J201 pin1 and pin3 connects to the S+ and S-, respectively, of the first power models. The S+ and S- correspond to the other models J201 pin1 and pin3. The S+ connects to positive output bus and S- connects to negative output bus.

#### Remote Sense < 250mV drop compensation:

The J201 Pin4 connects to current sharing bus that it connects to other models J201 pin4.

## CHARACTERISTIC CURVES

### OUTPUT VS. TEMPERATURE

180W convection cooled and 275W continuous with 200 LFM airflow. Derate output power to 50% at 70°C

### EFFICIENCY VS. LOADING

The high efficiency is achieved by using LLC technology, PFC topology minimizing switching losses. Synchronous SCHOTTKY or ultra-fast diode is used as rectifier in MINT1275 family because of high output voltage level.

### Ripple & Noise

To verify that the output ripple and noise does not exceed the level specified in the product specification. Measured using a scope probe socket with 0.1 $\mu$ F ceramic and a 10 $\mu$ F electrolytic capacitor connected in parallel across it, BW limit with 20MHz.
