

# DIFFERENTIAL CONNECTOR

## FCN-260(D) Series microGiGaCN™

RoHS Compliant

### ■ FEATURES

- I/O Connector designed for high speed differential signal applications.
- Matched Impedance (100 ohms ±10%)
- Low insertion loss
- Low cross talk
- Adopted by InfiniBand as 10G Ethernet, SAS, & SATA for 4x/12x Interface

### ■ SPECIFICATIONS

Item	Specifications
Operating temperature range	-55°C to +85°C
Current rating	AC 0.5A (signal) AC 1A (ground)
Max. allowable voltage	AC 30
Contact resistance (20m VDC 10mA)	80 m ohms max. (signal) 45 m ohms max.(ground)
Insulation resistance	1000M ohms minimum
Dielectric withstanding voltage	AC 500V for 1 minute
Durability	250 cycles
Insertion force	55.5 N max. (8 pair) 73 N max. (24 pair)
Withdrawl force	2.5 N min. (8 pair) 8 N min. (24 pair)

### ■ MATERIALS

Item	Materials
Insulator	LCP Resin (UL94V-0)
Conductor	Copper Alloy
Plating	Contact: Gold Plating (PAGOS) Terminal: Gold coat over Pd-Ni plating Cover: Zinc

*Product Specification are subject to change, please check our website (<http://us.fujitsu.com/connectors>) for the latest specifications.*

# microGiGaCN™ FCN-260 (D) Series

The MicroGigaCN offers a cost-effective I/O solution for high-speed applications in data and telecommunications convergence (voice, data, video and storage). It offers four or twelve link widths, offering a scalable performance range of 500Mbps to 6Gbps per link to meet the needs of entry-level and high-end enterprise systems. Forward crosstalk is less than 4% at 100 pico second pulse-rise time (four-pair switching).

Fujitsu Components designed the MicroGiGaCN to specifically address the requirements for a high speed differential signal I/O connector.

The MicroGiGaCN offers a unique solution to LVDS, InfiniBand, 10G Ethernet, 3G/6G SAS & SATA, and other high speed I/O applications. InfiniBand, IEEE802.3ak, SAS, & SATA have selected Fujitsu's connector for the 4x and 12x I/O connector interface.

The performance requirements of the connector system were tested with cable to simulate the actual requirements of an OEM System manufacturer. Our test data includes the parasitic effects of the PCB, along with measurements of a completed I/O cable assembly.

Electrical Performance in out testing:

- Matched Impedance: 100±10 ohms @ 100 ps Trise
- Low Cross Talk: NEXT 4.0% @ 100pc Trise (20 to 80%)
- Low Insertion Loss: 2.3dB @ 2.5Gbps (1.25GHz, 1 meter Cable Assembly)
- Skew within Differential Pair: 14.4ps (2 connectors and 2 meter of cable)
- Skew pair to pair: 21.2ps (2 connectors and 2 meter of cable)

## Connection

# microGiGaCN™ FCN-260 (D) Series

## Basic Concept for Differential Transfer

Product Specification are subject to change, please check our website (<http://us.fujitsu.com/connectors>) for the latest specifications.

Fujitsu Components has designed the mechanical features of the connector to provide space saving footprint that will allow for 3 4x I/O connectors to mount onto a PCI form, or 2 12x. As RFI/EMI are critical elements in high performance cable assemblies, Fujitsu Components provides the surface mount sockets with an EMI Ground Spring on the face of the connector, to insure that the metal surface of the connector makes sufficient contact with the metal face of the card bracket.

The latching mechanism of the backshell offers a lanyard system for ease of un-mating the I/O plug connector/cable assembly from the SMT I/O socket. The die cast backshell offers excellent RFI/EMI characteristics. The backshell uses a ferrule and

unique ground spring system to provide 360 degree contact of the cable shield to the backshell, which, combined with the solid interconnect of the socket to faceplate, offers low AC coupling termination.

The current version of the I/O plug comes with an attached paddlecard for wire termination. Fujitsu offers the paddlecard in either an equalized or un-equalized version (see factory for details of the equalized version). Standard product offering will be un-equalized. As there are multiple applications for the paddlecard, with industry and customer specific wire termination, Fujitsu Components offers options to customers of providing the I/O plug connector with custom paddlecards (consult factory).

Ferrule Crimp Dies

### Ferrule Crimp Dies

Part Number	Applicable Backshell	Applicable Cable OD	Notes
FCN-261T-T002/H	FCN-260C008-A/L0	9.53±0.4	Normally 8 pair, 24AWG
	FCN-260C008-A/S3	0.375±0.015	
FCN-261T-T103/H	FCN-260C008-C/L0	8.38±0.4	Normally 8 pair, 26AWG or 28AWG
	FCN-260C008-C/S3	0.330±0.015	
FCN-261T-T101/H	FCN260C024-E/L0	11.05±0.4	Normally 24 pair, 28AWG
		0.435±0.015	
FCN-261T-T105/H	FCN-260C024-A/L0	15.49±0.4	Normally 24 pair, 24AWG
	FCN-260C024-A/S3	0.610±0.015	

Both the press and ferrule crimp tool are required for the ferrule crimp process.

Note that additional tooling will be added to cover smaller wire bundle O.D.s. Please check with factory.

# microGiGaCN™ FCN-260 (D) Series

## ■ INSTRUCTIONS FOR CABLE ASSEMBLY

1. Set the crimping dies onto the hand press

After a set is completed

2. A ferrule and a spring are put on the cable.

a. Strip the cable insulator and put the spring, which shall be moved at the position where it does not interfere with assembly process.

b. The shield braid is turned back and cut the length of 13mm (0.512 in.)

c. A ferrule is put on the position of 2mm from the end of the jacket

d. Strip the shield pair of wires (27mm [1.063in.] from the ring edge) and then wire insulation (27.5mm [1.082 in.]).

e. A shield of pair wires passed through the aligner, and solder the wires onto the paddle card.

# microGiGaCN™ FCN-260 (D) Series

## 3. Ferrule crimping:

To explain the process clearly, the following photos do not have a paddle card.

a. Set the cable onto right side of the jig, and end of the jig, ferrule edges are made to become parallel, and surface of provisional crimp and the connector made to parallel, pre-crimp the ferrule until part A, D hit parts B, E. (The ferrule becomes an eclipse).

Cable		X (mm) [in.]
Pair	AWG	
8	24	10.5 [0.413]
24	24	15.60 [0.614]

b. Confirm that lever is tightened hardly. If it isn't, a lever shall be pulled to the front and tightened.

c. Set the cable at the table cavity at the left side. (The ferrule edge/end face shall be parallel to the jig).

If a ring is not able to be inserted into the hollow, loosen with the lever, and insert the ferrule again. Then tighten with the lever.

d. Crimp ferrule until parts A, D hit parts B, E.

e. Hand press is returned to the original position, and loosened with the lever pulling forward.

f. Crimp completion.

# microGiGaCN™ FCN-260 (D) Series

Check Y dimension:

Cable		Y (mm) [in.]
Pair	AWG	
8	24	10.8 [0.425]
24	24	16.00 [0.630]

4. Turn back the jacket and cut in the ferrule edge.

5. Installation of cover:

g. Set the cable and soldered with the paddle card into the outer cover. (#1 pin position side of the connector shall be on top) and put another cover, and set the spring, which is initially put on the cable, at the edge of the ferrule and install it inside and then fix the covers with the screws.
