

## Metallurgically Bonded Glass Surface Mount 1.5 Watt Zener Diodes

Screening in  
reference to  
MIL-PRF-19500  
available

### DESCRIPTION

This surface mountable 1.5 W Zener diode series in the JEDEC DO-213AB package is similar in electrical features to the JEDEC registered 1N5913B through 1N5956B axial-leaded package for 3.3 to 200 V. It is an ideal selection for applications of high density and low parasitic requirements. Due to its glass hermetic qualities and metallurgically enhanced internal contacts, it may also be used for high reliability applications when required by a source control drawing (SCD) or screening in accordance with MIL-PRF-19500 as described in Features below.

\*  $T_{EC}$  Maintained at  $30\text{ }^{\circ}\text{C}$ ,  $V_F = 1.2\text{ V}$  max @  $I_F = 200\text{ mA}$  (all types).

**NOTES:**

- Zener voltage ( $V_Z$ ) is measured at end cap temperatures  $T_{EC} = 30\text{ }^{\circ}\text{C}$ . Voltage measurement to be performed 90 seconds after application of dc current.
- The Zener impedance is derived from the 60 Hz ac voltage, which results when an ac current having an rms value equal to 10% of the dc Zener current ( $I_{ZT}$  or  $I_{ZK}$ ) is superimposed on  $I_{ZT}$  or  $I_{ZK}$ .
- This product series has also been previously identified as the CDLL5913B through CDLL5956B series that included the enhanced metallurgical bond. This alternate name may still be used.
