

LMx85-2.5, LM385B-2.5 Micropower Voltage References

1 Features

- Operating Current Range 20 μ A to 20 mA
- 1.5% and 3% Initial Voltage Tolerance
- Reference Impedance
 - LM385 1 Ω Maximum at 25°C
 - All Devices 1.5 Ω Maximum Over Full Temperature Range
- Very Low Power Consumption

2 Applications

- Portable Meter References
- Portable Test Instruments
- Battery-Operated Systems
- Current-Loop Instrumentation
- Panel Meters

3 Description

The LMx85-2.5 and LM385B are micropower, two-terminal, band-gap voltage references that operate over a 20- μ A to 20-mA current range and feature exceptionally low dynamic impedance and good temperature stability. On-chip trimming provides tight voltage tolerance. The band-gap reference for these devices has low noise and long-term stability.

The design makes these devices exceptionally tolerant of capacitive loading and, thus, easier to use in most reference applications. The wide dynamic operating temperature range accommodates varying current supplies, with excellent regulation.

The extremely low power drain of this series makes these devices useful for micropower circuitry. These voltage references can be used to make portable meters, regulators, or general-purpose analog circuitry, with battery life approaching shelf life. The wide operating current range of these voltage references allows them to replace older references with tighter-tolerance parts.

Device Information⁽¹⁾

PART NUMBER	PACKAGE	BODY SIZE (NOM)
LMx85D-2-5, LM385BD-2-5	SOIC (8)	4.90 mm x 3.90 mm

4 Revision History

Changes from Revision K (March 2016) to Revision L Page

- Changed ANODE pin description from: Shunt Current/Voltage input to: Common pin, normally connected to ground..... **3**
- Changed CATHODE pin description from: Common pin, normally connected to ground to: Shunt Current/Voltage input ... **3**

Changes from Revision J (March 2005) to Revision K Page

- Added *Features* section, *Device Information* table, *Table of Contents*, *Revision History* section, *Pin Configuration and Functions* section, *Specifications* section, *Absolute Maximum Ratings* table, *ESD Ratings* table, *Thermal Information* table, *Detailed Description* section, *Application and Implementation* section, *Power Supply Recommendations* section, *Layout* section, *Device and Documentation Support* section, and *Mechanical, Packaging, and Orderable Information* section **1**

5 Pin Configuration and Functions

Pin Functions

NAME	PIN			TYPE	DESCRIPTION
	SOIC	TSSOP	TO-92		
ANODE	4		1	I	Common pin, typically connected to ground
CATHODE		8	2	O	Shunt Current/Voltage Input
NC	1, 2, 3, 5, 6, 7		3	—	No Internal Connection

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

		MIN	MAX	UNIT
I_R	Reverse current		30	mA
I_F	Forward current		10	mA
	Lead temperature 1.6 mm (1/16 inch) from case for 10 seconds		260	°C
T_J	Junction temperature		150	°C
T_{stg}	Storage temperature	-65	150	°C

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

6.2 ESD Ratings

		VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	±2000
		Charged-device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾	±1000

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
I_Z	Reference current	0.02	20	mA
T_A	Operating free-air temperature	LM285-2.5	-40	85
		LM385-2.5, LM385B-2.5	0	70

6.4 Thermal Information

THERMAL METRIC ⁽¹⁾	LMx85-2.5, LM385B-2.5			UNIT	
	D (SOIC)	LP (T0-92)	PW (TSSOP)		
	8 PINS	3 PINS	8 PINS		
$R_{\theta JA}$	Junction-to-ambient thermal resistance	112	157	168.3	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	58.5	80.3	53.7	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	52.1	N/A	96.4	°C/W
Ψ_{JT}	Junction-to-top characterization parameter	15.8	24.6	4.5	°C/W
Ψ_{JB}	Junction-to-board characterization parameter	51.7	136.2	94.7	°C/W

(1) For more information about traditional and new thermal metrics, see the *IC Package Thermal Metrics* (SPRA953) application report.

6.5 Electrical Characteristics

$T_A = 25^\circ\text{C}$ unless otherwise noted.

PARAMETER		TEST CONDITIONS		MIN	TYP	MAX	UNIT
LM285-2.5

ΔV_Z	Change in reference voltage with current	$I_Z = 20\ \mu\text{A}$ to 1 mA	$T_A = 25^\circ\text{C}$			2	mV
			Full range			2	
		$I_Z = 1\ \text{mA}$ to 20 mA	$T_A = 25^\circ\text{C}$			20	
			Full range			30	
$\Delta V_Z/\Delta t$	Long-term change in reference voltage	$I_Z = 100\ \mu\text{A}$			± 20		ppm/khr
$I_{Z(\text{MIN})}$	Minimum reference current	Full range			8	20	μA
z_z	Reference impedance	$I_Z = 100\ \mu\text{A}$	$T_A = 25^\circ\text{C}$		0.4	1	Ω
			Full range			1.5	
V_n	Broadband noise voltage	$I_Z = 100\ \mu\text{A}$, $f = 10\ \text{Hz}$ to 10 kHz			120		μV
LM385B-2.5							
V_Z	Reference voltage	$I_Z = 20\ \mu\text{A}$ to 20 mA		2.462	2.5	2.538	V
$^{\alpha}V_Z$	Average temperature coefficient of reference voltage ⁽¹⁾	$I_Z = 20\ \mu\text{A}$ to 20 mA	Full range ⁽²⁾		± 20		ppm/ $^\circ\text{C}$
ΔV_Z	Change in reference voltage with current	$I_Z = 20\ \mu\text{A}$ to 1 mA	$T_A = 25^\circ\text{C}$			2	mV
			Full range			2	
		$I_Z = 1\ \text{mA}$ to 20 mA	$T_A = 25^\circ\text{C}$			20	
			Full range			30	
$\Delta V_Z/\Delta t$	Long-term change in reference voltage	$I_Z = 100\ \mu\text{A}$			± 20		ppm/khr
$I_{Z(\text{MIN})}$	Minimum reference current	Full range			8	20	μA
z_z	Reference impedance	$I_Z = 100\ \mu\text{A}$	$T_A = 25^\circ\text{C}$		0.4	1	Ω
			Full range			1.5	
V_n	Broadband noise voltage	$I_Z = 100\ \mu\text{A}$, $f = 10\ \text{Hz}$ to 10 kHz			120		μV

(1) The average temperature coefficient of reference voltage is defined as the total change in reference voltage divided by the specified temperature range.

(2) Full range is 0°C to 70°C for the LM385-2.5 and LM385B-2.5, and -40°C to 85°C for the LM285-2.5.

6.6 Typical Characteristics

Data at high and low temperatures are applicable only within the rated operating free-air temperature ranges of the various devices. For conditions shown as MIN or MAX, use the appropriate value specified under recommended operating conditions.

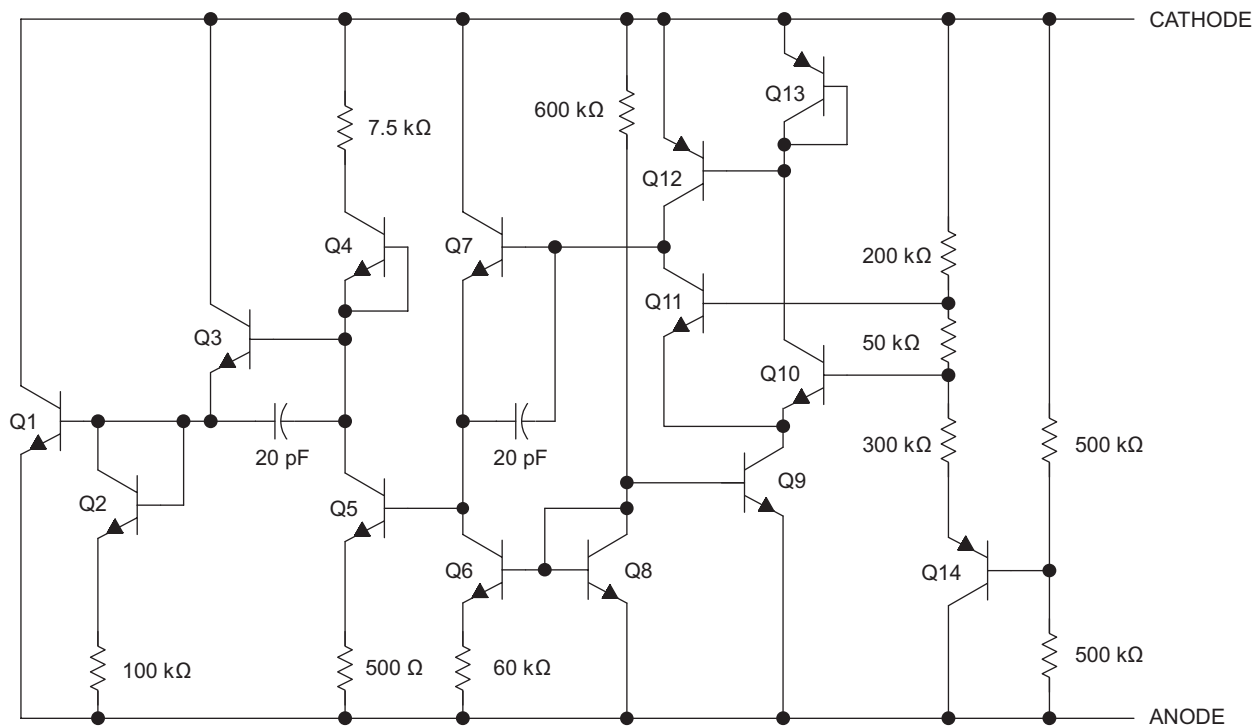

Figure 7. Noise Voltage vs Frequency

7 Detailed Description

7.1 Overview

The LMx85-2.5 and LM385B-2.5 devices maintain a nearly constant voltage between the cathode and anode of 2.5 V when the minimum cathode current up to the recommended maximum is provided. See [Recommended Operating Conditions](#) for recommended minimum cathode current.

7.2 Functional Block Diagram

7.3 Feature Description

A band-gap voltage reference controls a high-gain amplifier and shunt pass element to maintain a nearly constant voltage between the cathode and anode of 2.5 V. Regulation occurs after a minimum current is provided to power the voltage divider and amplifier. Internal frequency compensation provides a stable loop for all capacitive loads. Floating shunt design is useful for both positive and negative regulation applications.

7.4 Device Functional Modes

The LMx85-2.5 and LM385B-2.5 devices have a single functional mode. These devices can be used as 2.5-V fixed voltage references. The reference voltage cannot be adjusted for these devices.

For a proper Reverse Voltage to be developed, current must be sourced into the cathode of LM285. The minimum current needed for proper regulation is denoted in [Electrical Characteristics](#) as $I_{Z(MIN)}$.

8 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

8.1 Application Information

The LMx85-2.5 and LM385B-2.5 devices create a voltage reference for use in a variety of applications including amplifiers, power supplies, and current-sensing circuits.

8.2 Typical Application

Figure 8 shows how to use these devices to establish a 2.5-V source from a 9-V battery.

Figure 8. Reference From a 9-V Battery

8.2.1 Design Requirements

The key design requirement when using this device as a voltage reference is to supply the LM385 with a minimum Cathode Current (I_Z), as indicated in [Electrical Characteristics](#).

8.2.2 Detailed Design Procedure

To generate a constant and stable reference voltage, a current greater than $I_{Z(MIN)}$ must be sourced into the cathode of this device. This can be accomplished using a current regulating device such as LM334 or a simple resistor. For a resistor, its value should be equal to or greater than $(V_{supply} - V_{reference}) \div I_{Z(MIN)}$.

8.2.3 Application Curve

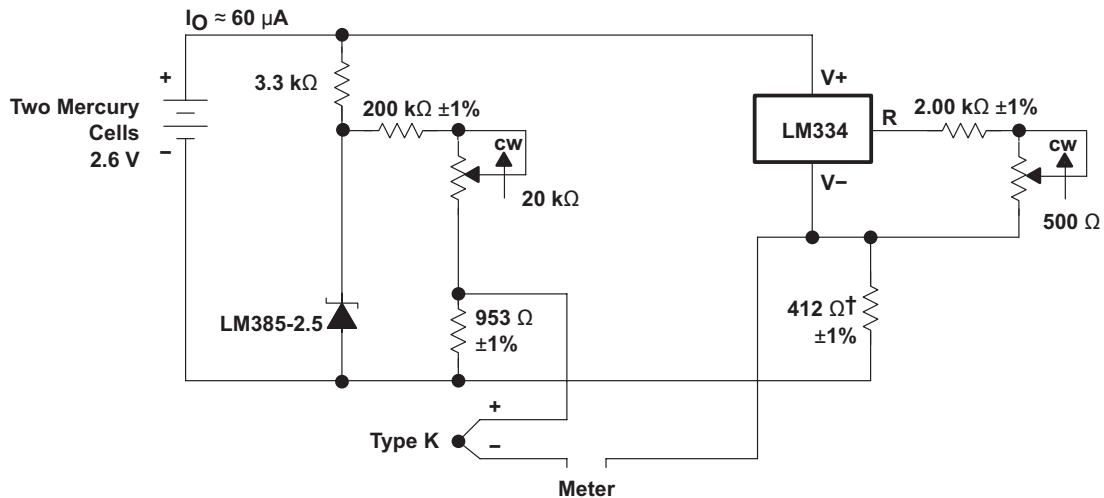

Figure 9. Device Transient Response

8.3 System Examples

8.3.1 Thermocouple Cold-Junction Compensator

Figure 10 shows how to use the LM385-2.5 in a circuit for thermocouple cold-junction compensation.

† Adjust for 12.17 mV at 25°C across 412 Ω

Figure 10. Thermocouple Cold-Junction Compensator

8.3.2 Generating Reference Voltage With a Constant Current Source

The LM334 device can be used to set the cathode current of the LM385-2.5 device over a wide range of input voltages to ensure proper voltage regulation by the LM385-2.5 device.

Figure 11. Generating Reference Voltage With a Constant Current Source Device

9 Power Supply Recommendations

The supply voltage should be current limited to ensure that the maximum cathode current is not exceeded.

For applications shunting high currents (30 mA maximum), pay attention to the cathode and anode trace lengths, and adjust the width of the traces to have the proper current density.

10 Layout

10.1 Layout Guidelines

Figure 12 shows an example of a PCB layout of LMx85x-2.5. Some key V_{ref} noise considerations are:

- It is optional to connect a low-ESR, 0.1- μ F (C_L) ceramic bypass capacitor on the cathode pin node.
- Decouple other active devices in the system per the device specifications.
- Using a solid ground plane helps distribute heat and reduces electromagnetic interference (EMI) noise pickup.
- Place the external components as close to the device as possible. This configuration prevents parasitic errors (such as the Seebeck effect) from occurring.
- Do not run sensitive analog traces in parallel with digital traces. Avoid crossing digital and analog traces if possible and only make perpendicular crossings when absolutely necessary.

10.2 Layout Example

Figure 12. Layout Diagram

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSELETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of ≤ 1000 ppm threshold. Antimony trioxide based flame retardants must also meet the ≤ 1000 ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

IMPORTANT NOTICE AND DISCLAIMER

TI PROVIDES TECHNICAL AND RELIABILITY DATA (INCLUDING DATA SHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES "AS IS" AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS AND IMPLIED, INCLUDING WITHOUT LIMITATION ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for skilled developers designing with TI products. You are solely responsible for (1) selecting the appropriate TI products for your application, (2) designing, validating and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, regulatory or other requirements.

These resources are subject to change without notice. TI grants you permission to use these resources only for development of an application that uses the TI products described in the resource. Other reproduction and display of these resources is prohibited. No license is granted to any other TI intellectual property right or to any third party intellectual property right. TI disclaims responsibility for, and you will fully indemnify TI and its representatives against, any claims, damages, costs, losses, and liabilities arising out of your use of these resources.

TI's products are provided subject to [TI's Terms of Sale](#) or other applicable terms available either on [ti.com](https://www.ti.com) or provided in conjunction with such TI products. TI's provision of these resources does not expand or otherwise alter TI's applicable warranties or warranty disclaimers for TI products.

TI objects to and rejects any additional or different terms you may have proposed.
