TLV809
3-Pin Supply Voltage Supervisor

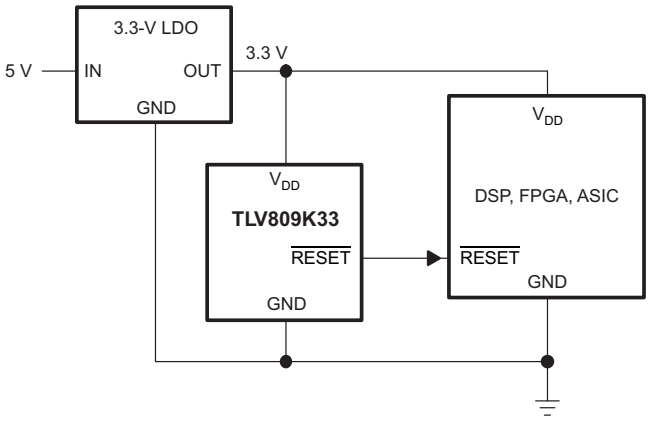
1 Features

- Precision Supply Voltage Monitor: 2.5 V, 3 V, 3.3 V, 5 V
- Power-On Reset Generator with a Fixed Delay Time of 200 ms
- Supply Current: 9 µA (Typical)
- Temperature Range: –40°C to +85°C
- 3-Pin SOT-23 Package
- Pin-for-Pin Compatible with the MAX809

2 Applications

- DSPs, Microcontrollers, and Microprocessors
- Wireless Communication Systems
- Portable and Battery-Powered Equipment
- Programmable Controls
- Intelligent Instruments
- Industrial Equipment
- Notebook and Desktop Computers
- Automotive Systems

Typical Application



3 Description

The TLV809 family of supervisory circuits provides circuit initialization and timing supervision, primarily for digital signal processors (DSPs) and processor-based systems.

During power-on, $\overline{\text{RESET}}$ is asserted when the supply voltage (V_{DD}) becomes greater than 1.1 V. Thereafter, the supervisory circuit monitors V_{DD} and keeps $\overline{\text{RESET}}$ active as long as V_{DD} remains below the threshold voltage, V_{IT}. An internal timer delays the return of the output to the inactive state (high) to ensure proper system reset. The delay time ($t_{d(typ)}$ = 200 ms) starts after V_{DD} rises above the threshold voltage, V_{IT}. When the supply voltage drops below the V_{IT} threshold voltage, the output becomes active (low) again. No external components are required. All devices in this family have a fixed sense-threshold voltage (V_{IT}) set by an internal voltage divider.

The TLV803 has an active-low, push-pull RESET output. See the TLV803 for an open-drain RESET output and the TLV810 for a push-pull, active-high RESET output.

This product family is designed for supply voltages of 2.5 V, 3 V, 3.3 V, and 5 V. The circuits are available in a 3-pin SOT-23 package. The TLV809 devices are characterized for operation over a temperature range of –40°C to +85°C.

Device Information(1)

PART NUMBER	PACKAGE	BODY SIZE (NOM)
TLV809	SOT-23 (3), DBV	2.90 mm × 1.60 mm
	SOT-23 (3), DBZ	2.92 mm × 1.30 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

Table of Contents

4 Revision History

Changes from Revision C (February 2012) to Revision D — **Page**

- Added *Device Information* table, *Pin Configuration and Functions* section, *ESD Ratings* table, *Overview* section, *Feature Description* section, *Device Functional Modes* section, *Application and Implementation* section, *Power Supply Recommendations* section, *Layout* section, *Device and Documentation Support* section, and *Mechanical, Packaging, and Orderable Information* section ... 1
- Deleted pinout drawing from page 1 ... 1
- Changed *Description* section: added third paragraph and changed section wording for clarity ... 1
- Changed *Voltage Options* table: changed title, deleted duplicated data already in POA ... 3
- Deleted soldering temperature parameter from *Absolute Maximum Ratings* table ... 3
- Changed I_{DD} parameter test conditions in *Electrical Characteristics* table ... 4

Changes from Revision B (September 2010) to Revision C — **Page**

- Changed TLV809L30 DBZ ordering information column in Package/Ordering Information table ... 3
- Changed TLV809K33 DBZ ordering information column in Package/Ordering Information table ... 3
- Changed first TLV809I50 DBZ ordering information entry in Package/Ordering Information table ... 3

Changes from Revision A (July 2010) to Revision B — **Page**

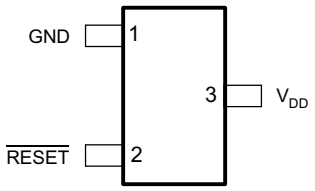
- Updated document format to current standards ... 1
- Added DBZ package to pinout figure ... 1
- Added DBZ package to *Package/Ordering Information* table ... 3
- Added *Thermal Information* table ... 3
- Changed Figure 3 ... 6

5 Voltage Options

PRODUCT	THRESHOLD VOLTAGE
TLV809J25	2.25 V
TLV809L30	2.64 V
TLV809K33	2.93 V
TLV809I50	4.55 V

6 Pin Configuration and Functions

DBV, DBZ Packages
3-Pin SOT-23
Top View



Pin Functions

PIN		I/O	DESCRIPTION
NO.	NAME		
1	GND	—	Ground pin. This pin must be connected to ground with a low-impedance connection.
2	$\overline{RESET}$	O	$\overline{RESET}$ pin. $\overline{RESET}$ is an active low signal, asserting when V_{DD} is below the threshold voltage. When V_{DD} rises above V_{IT}, there is a delay time (t_d) until $\overline{RESET}$ deasserts. $\overline{RESET}$ is a push-pull output stage.
3	V_{DD}	I	Supply voltage pin. A 0.1-µF ceramic capacitor from this pin to ground is recommended to improve stability of the threshold voltage.

7 Specifications

7.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)(1)

		MIN	MAX	UNIT
V_{DD}	Supply voltage(2)		7	V
	All other pins(2)	–0.3	7	
I_{OL}	Maximum low output current		5	mA
I_{OH}	Maximum high output current		–5	mA
I_{IK}	Input clamp current ($V_I < 0$ or $V_I > V_{DD}$)		±20	mA
I_{OK}	Output clamp current ($V_O < 0$ or $V_O > V_{DD}$)		±20	mA
T_A	Operating free-air temperature	–40	85	°C
T_{stg}	Storage temperature	–65	150	°C

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) All voltage values are with respect to GND. For reliable operation, do not operate the device at 7 V for more than t = 1000h continuously.

7.2 ESD Ratings

			VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 (1)	±2000	V
		Charged-device model (CDM), per JEDEC specification JESD22-C101 (2)	±500	

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

7.3 Recommended Operating Conditions

at specified temperature range (unless otherwise noted)

		MIN	NOM	MAX	UNIT
V_{DD}	Supply voltage	2		6	V
C_{IN}	V_{DD} bypass capacitor		0.1		µF
T_A	Operating free-air temperature range	–40		85	°C

7.4 Thermal Information

THERMAL METRIC (1)		TLV809		UNIT
		DBV (SOT-23)	DBZ (SOT-23)	
		3 PINS	3 PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	242.1	286.9	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	213.0	105.6	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	123.4	124.4	°C/W
ψ_{JT}	Junction-to-top characterization parameter	45.7	25.8	°C/W
ψ_{JB}	Junction-to-board characterization parameter	130.9	107.9	°C/W
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance	—	—	°C/W

(1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report, SPRA953.

7.5 Electrical Characteristics

at T_A = –40°C to +85°C (unless otherwise noted); typical values are at T_A = 25°C

PARAMETER			TEST CONDITIONS	MIN	TYP	MAX	UNIT
V_{OH}	High-level output voltage		V_{DD} = 2.5 V to 6 V, I_{OH} = –500 µA	V_{DD} – 0.2			V
			V_{DD} = 3.3 V, I_{OH} = –2 mA	V_{DD} – 0.4			
			V_{DD} = 6 V, I_{OH} = –4 mA	V_{DD} – 0.4			
V_{OL}	Low-level output voltage		V_{DD} = 2 V to 6 V, I_{OH} = 500 µA			0.2	V
			V_{DD} = 3.3 V, I_{OH} = 2 mA			0.4	
			V_{DD} = 6 V, I_{OH} = 4 mA			0.4	
	Power-up reset voltage (1)		V_{DD} ≥ 1.1 V, I_{OL} = 50 µA			0.2	V

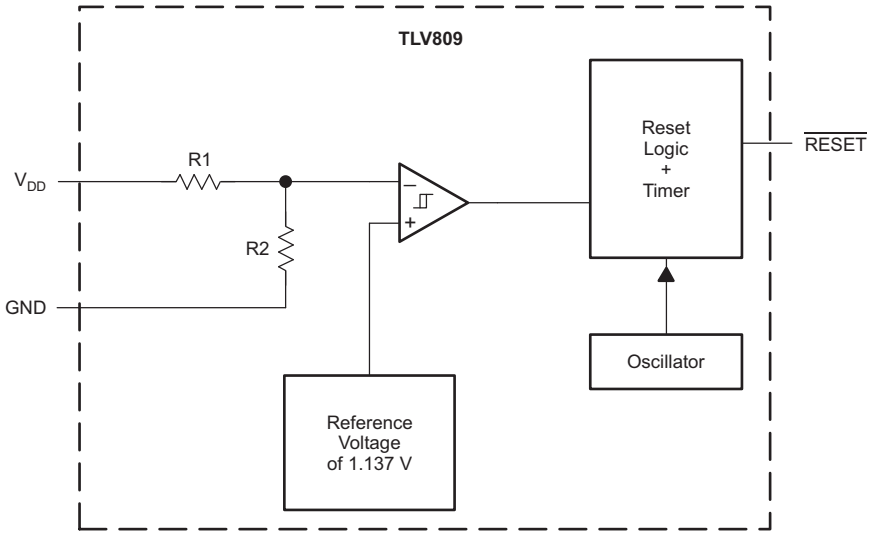
8 Detailed Description

8.1 Overview

The TLV809 is a 3-pin voltage detector with fixed detection thresholds, an active-low push-pull $\overline{\text{RESET}}$ output, and an internal timer to delay the $\overline{\text{RESET}}$ signal when V_{DD} rises above the threshold voltage.

8.2 Functional Block Diagram



8.3 Feature Description

8.3.1 Supply Voltage Monitoring

The device actively monitors its supply voltage to ensure that the power supply is above a certain voltage threshold.

The device offers various fixed threshold options that are approximately 10% below several standard supply voltages (2.5 V, 3.0 V, 3.3 V, 5.0 V).

8.3.2 $\overline{\text{RESET}}$ Output

The device has a $\overline{\text{RESET}}$ output to indicate the status of the input power supply.

$\overline{\text{RESET}}$ is an active low signal, asserting when V_{DD} is below the threshold voltage. When V_{DD} rises above V_{IT}, there is a delay time (t_d) until $\overline{\text{RESET}}$ deasserts.

$\overline{\text{RESET}}$ is a push-pull output stage.

8.4 Device Functional Modes

When the input supply voltage is in its recommended operating range (2 V to 6 V), the device is in a normal operational mode. In normal operational mode the device monitors V_{DD} for undervoltage detection.

When the input supply is below its recommended operating range, the device is in shutdown mode and therefore tries to assert $\overline{\text{RESET}}$.

9 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

9.1.1 V_{DD} Transient Rejection

The device has built-in rejection of fast transients on the V_{DD} pin. The rejection of transients depends on both the duration and the amplitude of the transient. The amplitude of the transient is measured from the bottom of the transient to the negative threshold voltage of the device, as shown in Figure 8.

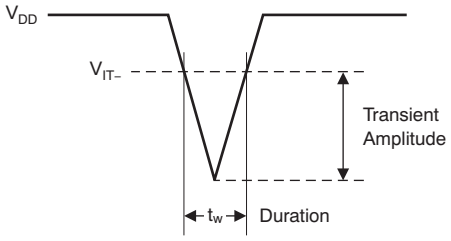


Figure 8. Voltage Transient Measurement

The device does not respond to transients that are fast duration and low amplitude or long duration and small amplitude. Figure 7 illustrates the relationship between the transient amplitude and duration needed to trigger a reset. Any combination of duration and amplitude above the curve generates a reset signal.

9.1.2 Reset During Power-Up and Power-Down

The device output is valid when V_{DD} is greater than 1.1 V. When V_{DD} is less than 1.1 V, the output transistor turns off and becomes high impedance. The voltage on the $\overline{\text{RESET}}$ pin rises to the voltage level connected to the pullup resistor. Figure 9 shows a typical waveform for power-up.

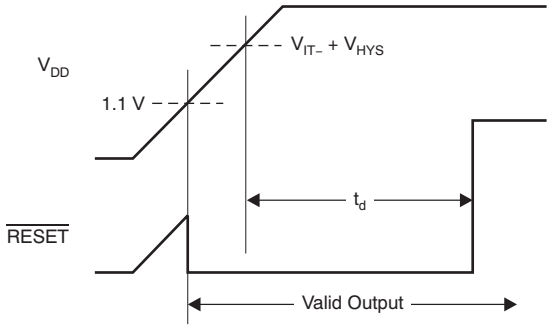

Figure 9. Power-Up Response

9.2 Typical Application

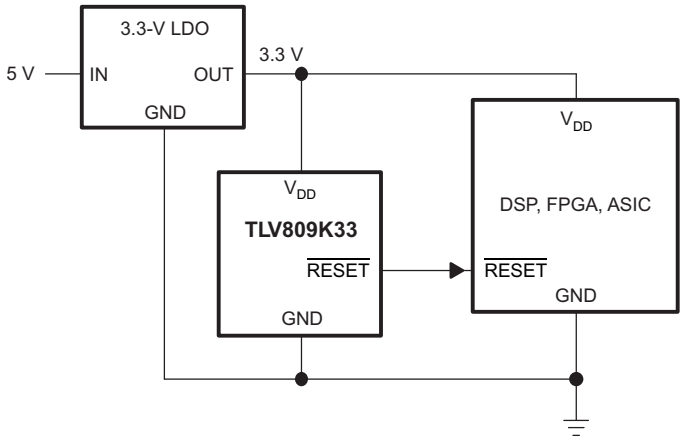

Figure 10. Monitoring a 3.3-V Supply

9.2.1 Design Requirements

The device must ensure that the supply voltage does not drop more than 15% below 3.3 V. If the supply voltage falls below 3.3 V – 15%, then the load must be disabled.

9.2.2 Detailed Design Procedure

The TLV809K33 is selected to ensure that V_{DD} is greater than 2.87 V when the load is enabled.

9.2.3 Application Curve

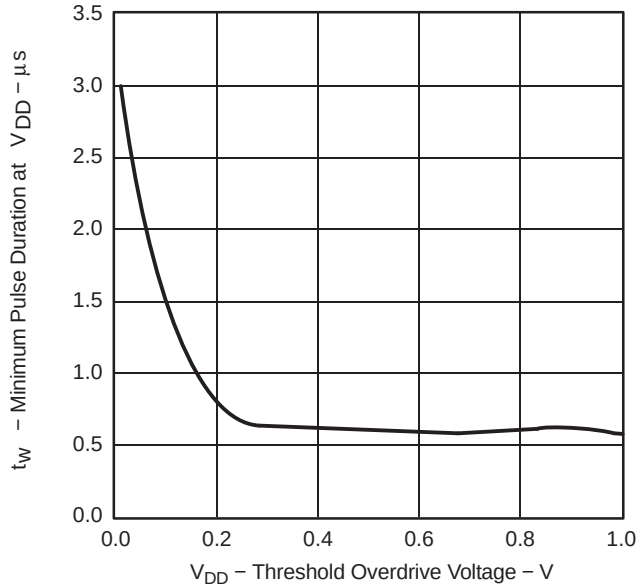

Figure 11. Minimum Pulse Duration at V_{DD} vs V_{DD} Threshold Overdrive Voltage

10 Power Supply Recommendations

Power the device with a low-impedance supply. A 0.1-µF bypass capacitor from V_{DD} to ground is recommended.

11 Layout

11.1 Layout Guidelines

Place the device near the load for the input power supply, with a low-impedance connection to the power supply pins of the load to sense the supply voltage.

11.2 Layout Example

12.3 Trademarks

E2E is a trademark of Texas Instruments.
All other trademarks are the property of their respective owners.

12.4 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) RoHS: TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".
RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.
Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

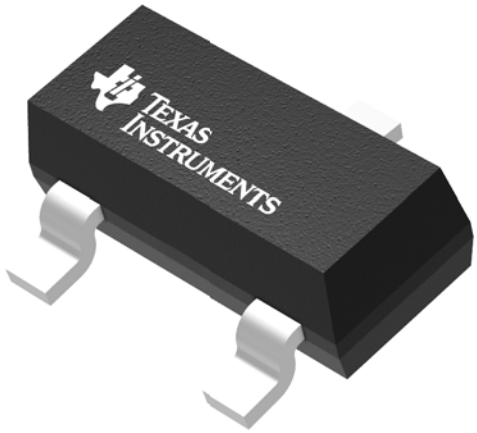
GENERIC PACKAGE VIEW

DBZ 3 SOT-23 - 1.12 mm max height

SMALL OUTLINE TRANSISTOR



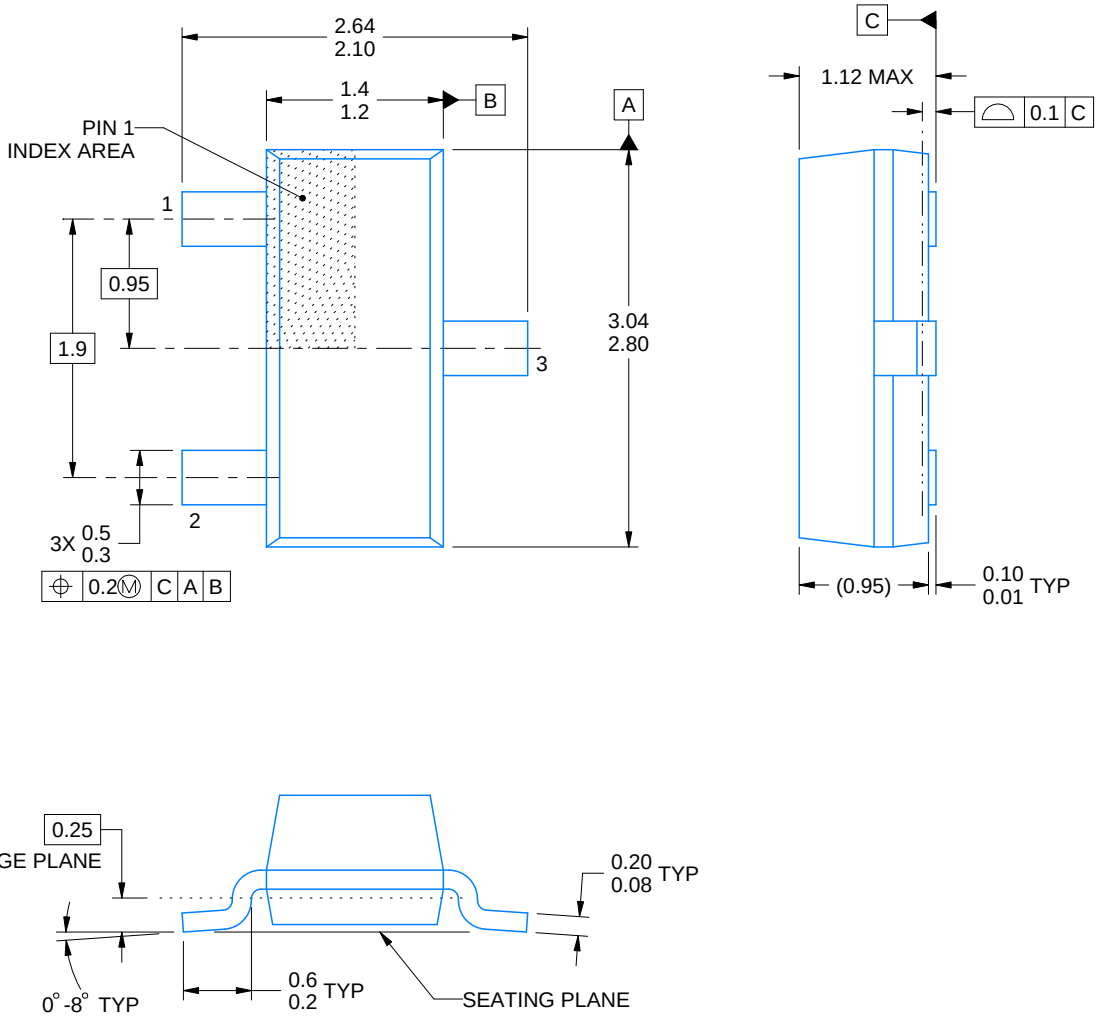
Images above are just a representation of the package family, actual package may vary.
Refer to the product data sheet for package details.

PACKAGE OUTLINE

DBZ0003A

SOT-23 - 1.12 mm max height

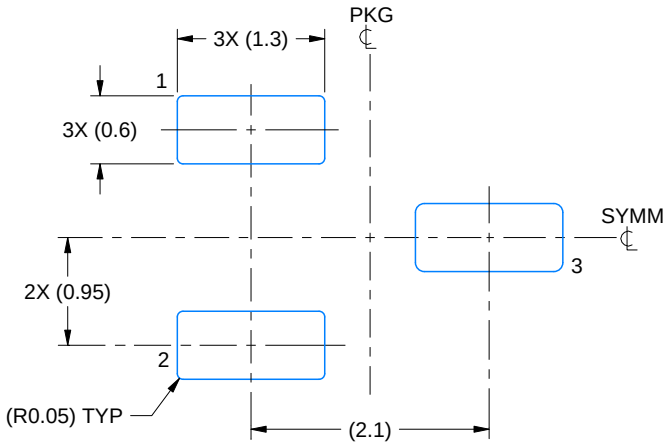
SMALL OUTLINE TRANSISTOR



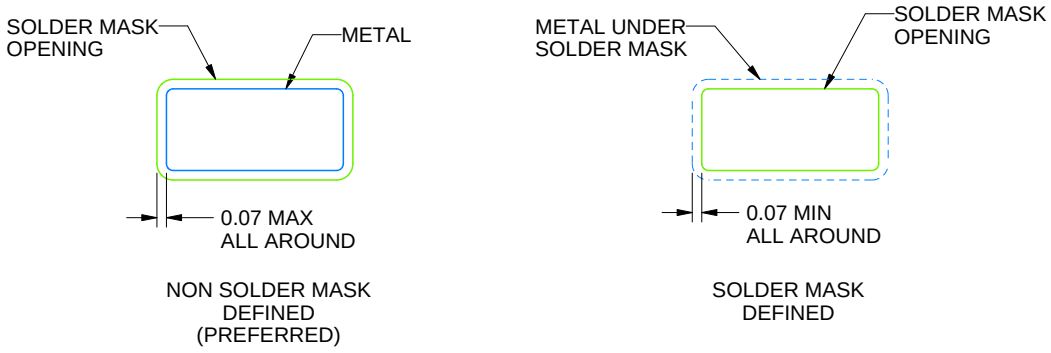
4214838/C 04/2017

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. Reference JEDEC registration TO-236, except minimum foot length.



LAND PATTERN EXAMPLE
SCALE:15X

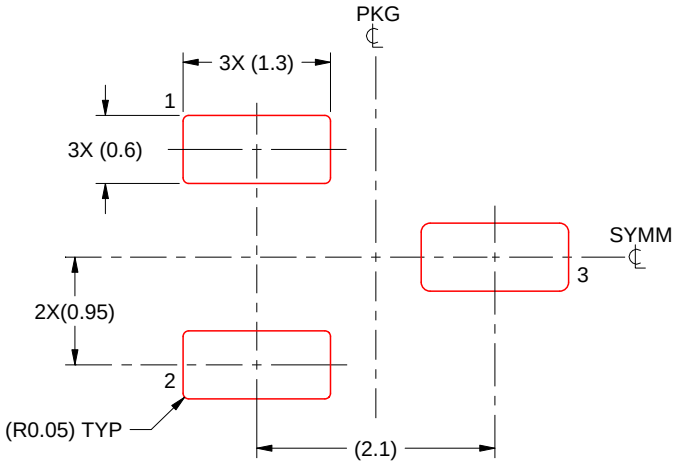


SOLDER MASK DETAILS

4214838/C 04/2017

NOTES: (continued)

4. Publication IPC-7351 may have alternate designs.
5. Solder mask tolerances between and around signal pads can vary based on board fabrication site.



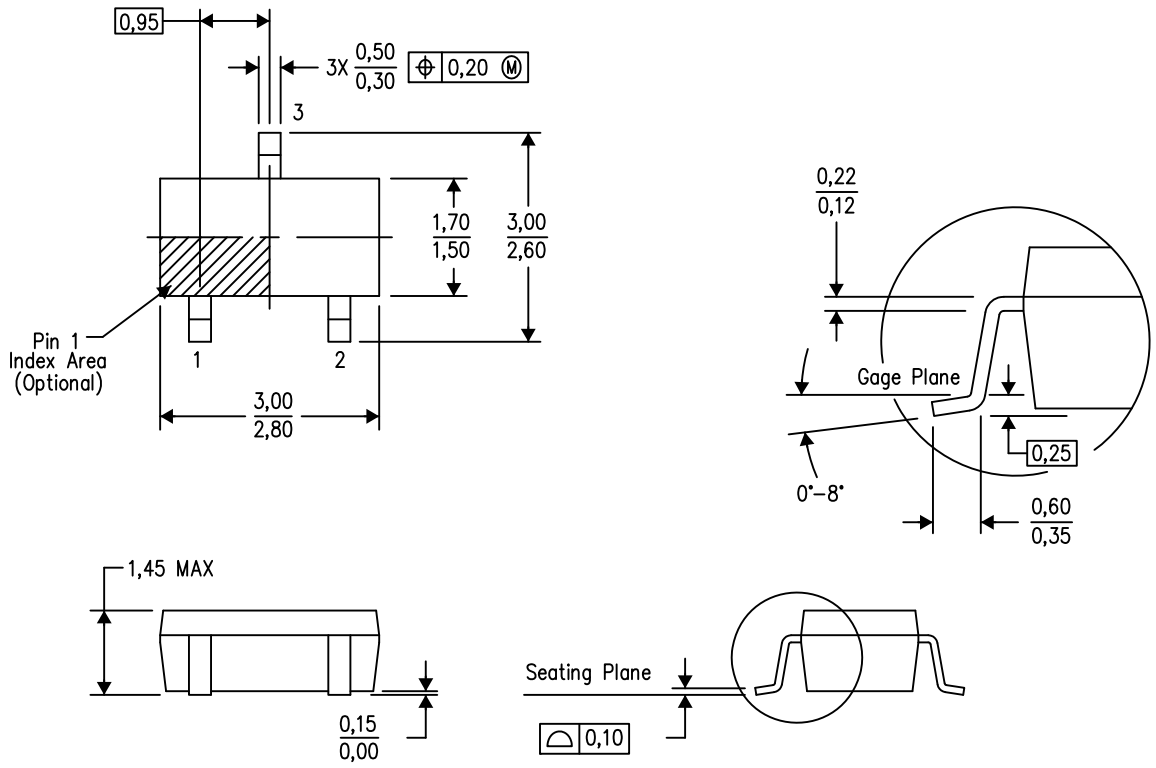
SOLDER PASTE EXAMPLE
BASED ON 0.125 THICK STENCIL
SCALE:15X

4214838/C 04/2017

NOTES: (continued)

6. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
7. Board assembly site may have different recommendations for stencil design.

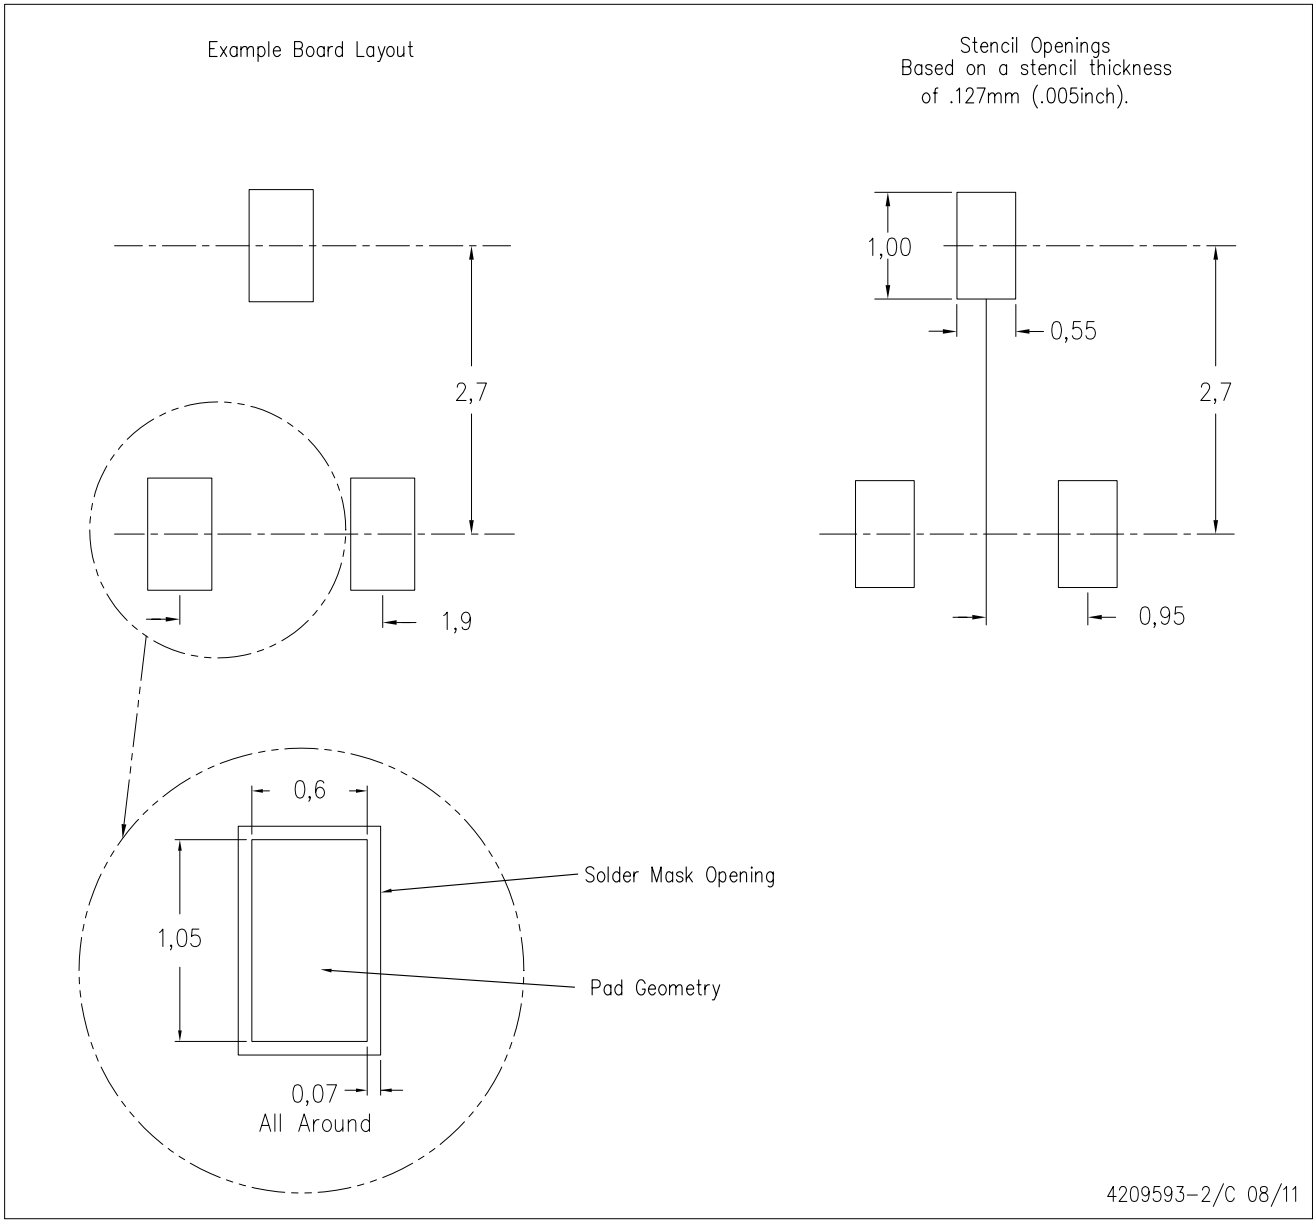
DBV (R–PDSO–G3) PLASTIC SMALL–OUTLINE PACKAGE



4073253–2/N 12/14

NOTES:
A. All linear dimensions are in millimeters.
B. This drawing is subject to change without notice.
C. Body dimensions do not include mold flash or protrusion. Mold flash and protrusion shall not exceed 0.15 per side.

DBV (R–PDSO–G3) PLASTIC SMALL OUTLINE



NOTES:
A. All linear dimensions are in millimeters.
B. This drawing is subject to change without notice.
C. Customers should place a note on the circuit board fabrication drawing not to alter the center solder mask defined pad.
D. Publication IPC–7351 is recommended for alternate designs.
E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Example stencil design based on a 50% volumetric metal load solder paste. Refer to IPC–7525 for other stencil recommendations.
