Notes

- Remote ON/OFF. Positive Logic 1
- ON: Pin 3 open; or V > Vin - 0.5 V
- OFF: Pin 3 GND; or V < 0.8 V (min - 0.2 V).
- See Figures 1 and 2 for safe operating curves.
- A 470 μ F electrolytic input capacitor is required for proper operation. The 3 capacitor must be rated for a minimum of 700 mA rms of ripple current. An external output capacitor is not required for basic operation. Adding 330 4
- μF of distributed capacitance at the load will improve the transient response. 5
- 1 A/µs load step, 50 to 100% I_{omax} , $C_{out} = 330 \,\mu$ F. If utilized Vout will track applied voltage by ±0.3 V (up to Vo set point). 6
- The pre-bias start-up feature is not compatible with Auto-Track™. This is because when the module is under Auto-Track™ control, it is fully active and 7 will sink current if the ouput voltage is below that of a back-feeding source. Therefore to ensure a pre-bias hold-off, one of the following two techniques must be followed when input power is first applied to the mdoule. The Auto-Track $^{\rm M}$ function must either be disabled, or the module's output held off using the inhibit pin. Refer to Application Note 155 for more details. Tape and reel packaging only available on the surface-mount versions.
- 8
- To order Pb-free (RoHS compatible) surface-mount parts replace the 9 mounting option 'S' with 'Z', e.g. PTH05010WAZ. To order Pb-free (RoHS compatible) through-hole parts replace the mounting option 'H' with 'D', e.g. PTH05010WAD.
