

Key Features

es Type ROX Series

High Power with Small Size for Space Saving

Excellent Long Term Stability

Complete Flameproof Construction

Controlled Temperature Capability

Solvent Resistant Coat and Code

Special Lead Formations Possible

The resistive element comprises a metal oxide film deposited on a ceramic former. The element is protected by a flameproof coating which will withstand overload conditions without flame or mechanical damage. They are recommended for use in applications such as line protection etc

Characteristics – Electrical

		Rated	Max.	Max.	Dielectric	Resistance	Operating

Resistors shall have a rated direct-current (DC) continuous working voltage or an approximate sine-wave root-mean-square (RMS) alternating-current (AC) continuous working voltage at commercial line frequency and waveform corresponding to the power rating , as determined from the following formula :

 $RCWV = VP \times R$

Where : RCWV = Rated DC or RMS AC continuous working voltage at commercial-line frequency and waveform (volt)

P = Power Rating (watt)

R = Nominal Resistance (ohm)

Rated Voltage = RCWV or Max. Working Voltage, whichever is smaller

Dimensions in millimetres unless otherwise specified Dimensions Shown for reference purposes only. Specifications subject to change

Painting method:

Welding point, terminal and lead wire, is permissible to be exposed without the outer coated cover. The extent should be within 1/2 of the resistor body diameter.

Marking:

For 1/4W, 1/2W, 1W, 2W, 3W, 4W, 5W and all of small size Resistors shall be marked with color coding. colors shall be in accordance with JIS C 0802

For 7W, 8W, 9W marking shall be in text format:

Code description and regulation

- 1. Wattage rating.
- 2. Nominal resistance value.
- 3. Resistance Tolerance.

G: ± 2 %

J: ± 5 %

K: ± 10 %
