

Power Relay F7

- Pin assignment similar to ISO 7588 part 1
- Customized versions on request
 - 24VDC versions with contact gap >0.8mm
 - Integrated components (e.g. resistor, diode)
 - Customized marking/color
 - Special covers (e.g. notches, release features, brackets)

Typical applications

Cross carline up to 70A for example: ABS control, cooling fan, energy management, engine control, glow plug, heated front screen, ignition, lamps: front, rear, fog light, main switch/supply relay.

- 1) Special high performance 24VDC version with contact gap >0.8mm.
- 2) The values apply to a resistive or inductive load with suitable spark suppression and at maximum 14VDC for 12VDC or 28VDC for 24VDC load voltages. For a load current duration of maximum 3s for a make/break ratio of 1:10.
- Current and time are compatible with circuit protection by a typical automotive fuse.
 Relay will make, carry and break the specified current.
- 4) See chapter Diagnostics of Relays in our Application Notes or consult the internet at http://relays.te.com/appnotes/
- 5) For unsuppressed relay coil. Any parallel device to the coil will increase the release time.
- 6) Electrical endurance data is not valid for diode versions. Any diode or pn-junction parallel to the coil (internal or external) will significantly decrease the electrical lifetime, especially when used for inductive loads.

All figures are given for coil without pre-energization, at ambient temperature +23°C.

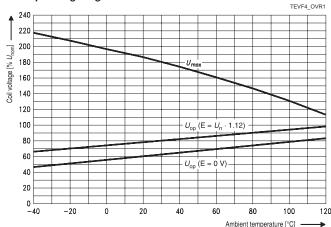

Max. DC load breaking capacity

Load limit curve: safe shutdown, no stationary arc/make contact.

Load limit curve measured with low inductive resistors verified for 1000 switching events.

Coil operating range

Does not take into account the temperature rise due to the contact current $\mathsf{E} = \mathsf{pre}\text{-energization}.$
