- Member of the Texas Instruments Widebus ${ }^{\text {TM }}$ Family
- Supports the VME64 ETL Specification
- Reduced TTL-Compatible Input Threshold Range
- High-Drive Outputs ( $\mathrm{IOH}_{\mathrm{O}}=-60 \mathrm{~mA}$, $\mathrm{I}_{\mathrm{OL}}=90 \mathrm{~mA}$ ) Support Equivalent $25-\Omega$ Incident-Wave Switching
- $V_{C C}$ BIAS Pin Minimizes Signal Distortion During Live Insertion
- Internal Pullup Resistor on $\overline{O E}$ Keeps Outputs in High-Impedance State During Power Up or Power Down
- Distributed $V_{C C}$ and GND Pins Minimize High-Speed Switching Noise
- Equivalent $25-\Omega$ Series Damping Resistor on B Port
- Bus Hold on Data Inputs Eliminates the Need for External Pullup/Pulldown Resistors

## description/ordering information

The SN74ABTE16246 is an 11-bit noninverting transceiver designed for asynchronous two-way communication between buses. This device has open-collector and 3 -state outputs. The device allows data transmission from the $A$ bus to the $B$ bus or from the $B$ bus to the $A$ bus, depending on the logic level at the direction-control (DIR) input. The output-enable ( $\overline{\mathrm{OE}}$ ) input can be used to disable the device so that the buses are effectively isolated. When $\overline{\mathrm{OE}}$ is low, the device is active.
The B port has an equivalent $25-\Omega$ series output resistor to reduce ringing. Active bus-hold inputs on the $B$ port hold unused or floating inputs at a valid logic level.
The A port provides for the precharging of the outputs via $\mathrm{V}_{\mathrm{CC}} \mathrm{BIAS}$, which establishes a voltage between 1.3 V and 1.7 V when $\mathrm{V}_{\mathrm{CC}}$ is not connected.
Active bus-hold circuitry holds unused or undriven inputs at a valid logic state. Use of pullup or pulldown resistors with the bus-hold circuitry is not recommended.

VOLTAGE WAVEFORMS
ENABLE AND DISABLE TIMES

NOTES: A. $C_{L}$ includes probe and jig capacitance.
B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
C. All input pulses are supplied by generators having the following characteristics: $\mathrm{PRR} \leq 10 \mathrm{MHz}, \mathrm{Z}_{\mathrm{O}}=50 \Omega, \mathrm{t}_{\mathrm{r}} \leq 2.5 \mathrm{~ns}, \mathrm{t}_{\mathrm{f}} \leq 2.5 \mathrm{~ns}$.
D. The outputs are measured one at a time with one transition per measurement.
E. $t_{t}$ is measured between 1 V and 2 V of the output waveform.
F. $t_{t}$ is measured between $10 \%$ and $90 \%$ of the output waveform.

${ }^{(1)}$ The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.
${ }^{(2)}$ RoHS: TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed $0.1 \%$ by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".
RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption
Green: TI defines "Green" to mean the content of Chlorine (CI) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.
${ }^{(3)}$ MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.
${ }^{(4)}$ There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.
${ }^{(5)}$ Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a " $\sim$ " will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.
${ }^{(6)}$ Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer:The information provided on this page represents Tl's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and
continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
