

Modular Jack Selection Guide

Modular Jack connectors, a cornerstone of communications technology, have been used in the communications and information industry for many years. The main reasons for this are the simplicity and reliability of these products. Whether integrated in a simple telephone system, or in a gigabit application, Modular Jacks represent the standard for network connections.

Today's electronics system packages are getting smaller and smaller, while performance requirements continue to rise. As a result, applications that use modular jacks with integrated magnetics are becoming more popular. When the magnetic components – otherwise found as discrete components on the circuit board – are integrated, this reduces both, interference sensitivity and board surface requirements. The filter elements are integrated without any changes to the size of the jack housing.

This guide is aimed to give orientation throughout ERNI's entire modular jack product range and helps in finding the suitable solution for your application.

ERNI offers a large variety of standard Modular Jacks RJ11/RJ45:

- Without integrated magnetics
- Single Port
- Multi-port: stacked and ganged
- Right angled and vertical versions
- Low profile
- Couplers
- THT
- THR
- SMT
- CAT 3/4, 5, 5e
- LEDs

ERNI offers a large variety of Modular Jacks with integrated magnetics:

- Single Port
- Multi-port: ganged
- Right angled and vertical versions
- Low profile
- 10 BASE T
- 10/100 Mbit/s (Fast Ethernet)
- 10/100/1000 Mbit/s (Gigabit Ethernet)
- Power over Ethernet (PoE)
- Industrial Operating Temperature
- Lightning Protection GR-1089-Core
- THT
- LEDs

Modular Jacks with Integrated Filter Components

ERNI offers Integrated Magnetic RJ45 connectors for applications of different data rates, such as 10 Mbit/s, 10/100 Mbit/s (Fast Ethernet) and 10/100/1000 Mbit/s (Gigabit Ethernet). For example, Gigabit modular connectors are designed to accommodate today's demand for high-speed communication applications. Typical applications are telecom/datacom equipment, data storage, personal computers, network printers and peripheral equipment. For industrial use High Operating Temperature Jacks are available to serve the requirements of extended operating temperature (-40°C to +85°C) like in automations systems or test equipment.

These filtered connectors provide signal conditioning and increase emissions performance. By integrating into the connector, magnetic filtering components – which are usually found as discrete surface mount components on a PCB – increase PCB space and reduce manufacturing processes. ERNI Modular Jacks with Integrated Magnetics are specifically designed to be drop-in replacements for traditional modular jacks.

Integrated magnetic packages are designed to meet FCC and IEEE 802.3 requirements for performance and voltage isolation. Variable sizes and magnetic configurations allow for a wide variety of applications. ERNI Modular Jacks are available in standard PCB layouts and come in single and ganged port versions.

Modular Jack Selection Guide

With Integrated Magnetics

Perfect solutions for many applications

ERNI Modular Jacks with integrated magnetics are compatible with common PHYs of well-known manufacturers.

In addition to recommendations of your chipset manufacturer a reference matrix to select the appropriate magnetics circuit is available on ERNI website.

If the exact requirement for your application is not shown, please contact your ERNI representative.
